SEMESTER-I

SEMESTER-I

Course Code	Course Name	Course Category	Credits			
			L	T	P	C
EGL 101	Communicative English	FC	3	0	0	3

UNIT I

Course Introduction and Overview. Tenses Principles of Sentence Structure & Paragraph Writing (S+V+O).

UNIT II

The Fundamentals of Speech (Ethos, Pathos & Logos) Verbal & Nonverbal Communication Fundamentals of Personal, Informative, and Scientific Speech.

UNIT III

Listening Skills: Definition, Barriers, Steps to Overcome Listening to Influence, Negotiate Note taking & Making while Listening.

UNIT IV

Read to Skim, and Scan Read to Comprehend (Predict, Answer Questions & Summarize) Read to Understand.

UNIT V

Write to Inform – I News, Emails, Write to Inform- II Notice, Agenda & Minutes, Write to Define (Definitions & Essays).

TEXTBOOKS/REFERENCES

1. Shoba, Lourdes. (2017). Communicative English: A Workbook. U.K: Cambridge University Press.
2. Steven, Susan, Diana. (2015). Communication: Principles for a Life Time. U.S.A: Pearson 6th Ed.
3. Publication Manual of the American Psychological Association, (2010). 6th Ed.
4. Kosslyn, S.M. "Understanding Charts and Graphs", Applied Cognitive Psychology, vol. 3, pp. 185-226, 1989.

SEMESTER-I/ SEMESTER-II

Course Code	Course Name	Course Category	Credits			
			L	T	P	C
PHY 101	Engineering Physics	FC	2	0	0	2

UNIT I: CLASSICAL PHYSICS

Introduction, Newton's laws of mechanics, Free body force diagram, Momentum and Impulse, Conservation of linear momentum, Work-Kinetic Energy Theorem and related problems, Conservation of mechanical energy: Worked out problems, Elastic properties of solids, Stress-strain relationship, elastic constants, and their significance.

UNIT II: ELECTRO-MAGNETISM – I

Focus on Maxwell's Equation I: Discuss lines of force and Electrostatic flux, Introduce Gauss's law (differential and integral form), Application of Gauss Law: ES field due to infinite wire and sheet. Electrostatic field due to conducting and insulating sphere. Concept of Electrostatic Potential and Potential Energy. Inter-relation with electrostatic field. Capacitor and Capacitance: Capacitance of a parallel plate capacitor. **Focus on Maxwell's Equation II:** Discuss absence of Magnetic monopoles!

UNIT III: ELECTRO-MAGNETISM - II

Focus on Maxwell's Equation IV: Discuss Ampere's circuital law. Calculate Magnetic field due to Infinite wire and Solenoid using Ampere's Law. Introduce Biot-Savart Law as an alternative approach to calculate magnetic field. Calculate Magnetic field due to finite current element using Biot Savart Law. **Focus on Maxwell's Equation III:** Lenz's Law and Faraday's law: Induced EMF and Current Describe Maxwell Equations as the foundation of electro-magnetism. Derive differential forms starting from Integral forms. Discuss Physical Significance.

UNIT IV: OPTICS

Concept of Electromagnetic waves & EMW Spectra, Geometrical & Wave Optics: Laws of reflection and refraction, Concept of Interference, Phase Difference and Path Difference, Newton's Ring, The Michelson Interferometer.

UNIT V: MODERN PHYSICS

Black Body Radiation; Wien's displacement law, Discussion on failure of classical laws to explain Black Body Radiation, and concept of Planck's Hypothesis, What is Light? Photon and Overview on Planck Constant, Photoelectric effect – Concept and Experimental Setup, Photoelectric effect – Intensity vs Current, Frequency vs Kinetic Energy, the drawback of Wave theory to explain Photoelectric effect, Wave properties of particle: De Broglie wave.

RECOMMENDED RESOURCES:

1. University Physics with Modern Physics with Mastering Physics - D Young, Roger A Freedman And Lewis Ford, XII Edition (2018), Publisher – PEARSON
2. Physics for Scientist and Engineers - Raymond A. Serway, John W. Jewett, XIX Edition (2017), Publisher - Cengage India Private Limited
3. Concept of Modern Physics - Arthur Beiser, Shobhit Mahajan, S Rai, 2017 Edition, Publisher - Tata McGraw Hill
4. Introduction to Electrodynamics – David J. Griffiths. 4th Edition (2012), Publisher - PHI Eastern Economy Editions
5. Introduction to Geometrical and Physical Optics, B. K. Mathur, 7 Edition, Gopal Printing.

SEMESTER-I / SEMESTER-II

Course Code	Course Name	Course Category	Credits			
			L	T	P	C
PHY 101L	Engineering Physics Lab	FC	0	0	2	1

EXPERIMENT DESCRIPTION:

- Moment of inertia of a flywheel.
- Hooke's law and determine spring constant for a given spring.
- Compound Pendulum: Acceleration due to gravity and radius of gyration of the given pendulum, To determine the rigidity modulus of steel wire by torsional Pendulum **[Optional]**, To calculate Young's modulus of a given material by deflection method **[Optional]**.
- Faraday law & Induced E.M.F: Measurement of the induced voltage and calculation of the magnetic flux induced by a falling magnet, To study the B-H curve of the given material and the permeability curve of the given material. **[Optional]**.
- Biot-savart law: To study the dependency of magnetic field on the current and magnetic field along the axis of a current carrying circular loop, Hall Effect: Determination of type of semiconductor and carrier concentration in a given semiconductor **[optional]**.
- Magnetic field in Helmholtz coil **[Optional]**.
 1. To investigate the spatial distribution of magnetic field between coils and determine the spacing for uniform magnetic field.
 2. To demonstrate the superposition of the magnetic fields of the two individual coils.
- To determine the dielectric constant of air using dielectric constant kit.
- Measurement of Resistivity of a semiconductor using Four probes **[Optional]**.
- Michelson interferometer kit with diode laser .
- Resolving power of A Telescope **[Optional]**.
- Balmer Series and Rydberg's constant **[Optional]**.
- He-Ne laser kit: Optical Interference and Diffraction.
- Solar cell characteristics**[Optional]**.
- Frank Hertz Experiment **[Optional]**.
- Particle size measurement.
- Verification of Stefan's Law.
- Measurement of specific heat capacity of any given material **[optional]**.

RECOMMENDED RESOURCES:

1. Laboratory manuals, SRM University – AP.
2. R.K. Shukla and Anchal Srivastava, "Practical Physics" New Age international (P) limited Publishers, 2006 [ISBN(13) – 978-81-224-2482-9].

SEMESTER-I / SEMESTER-II

Course Code	Course Name	Course Category	Credits			
			L	T	P	C
CHE 103	Chemistry for Engineers	FC	2	0	0	2

UNIT I - CHEMICAL BONDING

Ionic, covalent, metallic bonds and hydrogen bonding. Theories of bonding: Hybridization: Types of hybridization, sp , sp^2 , sp^3 , sp^3d , d^2sp^3 . Shapes of molecules (VSEPR Theory): $BeCl_2$, CO_2 , BF_3 , H_2O , NH_3 , CH_4 , PCl_5 , XeF_2 , SF_6 , XeF_4 . Molecular orbital theory: Linear combination of atomic orbitals (LCAO Method), bond order, homo-nuclear diatomic molecules such as H_2 , O_2 , N_2 .

UNIT II – PHASE RULE, THERMOCHEMISTRY AND KINETICS

Phase rule: Introduction. Definition of the terms used in phase rule with examples. Application of phase rule to one and two component systems i.e., water and Sn-Pb system phase diagram. Basics of thermochemistry: Standard terms in thermochemistry and their significance. Heat of combustion, formation and sublimation (with examples in fuels and propellants). Kinetics: Order and molecularity of reactions, zero order, first order and problems associated with Zero & First order.

UNIT III. CRYSTALLINE AND ELECTRONIC MATERIALS

Crystal structure: crystal systems, Properties of cubic crystals, Bragg's Law, Bravais lattices, Miller indices. Point defects. Band theory: metals, insulators, and semiconductors. Band gaps, doping, and devices.

UNIT IV - MATERIALS CHEMISTRY

Classification of polymers: Natural and synthetic. Thermoplastic and Thermosetting. Properties of polymers: T_g , Tacticity, Molecular weight, weight average. Degradation of polymer. Common Polymers: Elastomer, Conducting polymer, biodegradable polymer. Examples: PET (Polyethylene terephthalate), nylon, polystyrene. Demineralization of water and Zeolite process.

UNIT V – ELECTROCHEMICAL ENERGY SYSTEM

Electrochemical cells. Primary and secondary cells. Lead-acid battery, Li^+ batteries and Fuel cells.

BOOKS FOR STUDY:

1. D. F. Shriver, P. W. Atkins and C. H. Langford, Inorganic Chemistry, 3rd Ed., Oxford University Press, London, 2001.
2. Atkins, P.W.; de Paula, J. (2006). Physical chemistry (8th ed.). Oxford University Press. ISBN 0-19-870072-5.
3. B. R. Puri, L. R. Sharma & M. S. Pathania, Principles of Physical Chemistry, 46th Edition (2013), Vishal Publication Company
4. V. R. Gowariker, N. V. Viswanathan, J. Sreedhar, Polymer Science, New Age International, 1986. ISBN: 0-85226-307-4
5. A.R. West, Solid State Chemistry and its applications, 2nd Edition, Student Edition, 584 pages, 2014, ISBN: 978-1-119-94294-8.
6. B. M. Weckhuysen and J. Yu, Recent advances in zeolite chemistry and catalysis, Chem. Soc. Rev., 2015, 44, 7022-7024.
7. V. R. Gowariker, N. V. Viswanathan, J. Sreedhar, Polymer Science, New Age International, 1986. ISBN: 0-85226-307-4.

BOOKS FOR REFERENCE:

1. F.W. Billmeyer, Text Book of Polymer Science, 3rd Ed., John Wiley & Sons, New York, 2003.
2. A.J.Bard and L.R. Faulkner, Electrochemical methods –Fundamentals and Applications,,2nd Ed., John Wiley and Sons, 2001.
3. D.M. Adams, Inorganic Solids, An introduction to concepts in solid state structural chemistry. J. Willey & Sons, 1974.
4. A.K. Cheetham and P. Day, Solid State Chemistry: 1. Techniques and 2. Applications, A Clarendon Press Publication, 1990, ISBN: 9780198552864.
5. C.N.R. Rao and J. Gopalakrishnan, New directions in solid state chemistry, Cambridge University Press, 1997, Online ISBN: 9780511623141

SEMESTER-I/ SEMESTER-II

Course Code	Course Name	Course Category	Credits			
			L	T	P	C
CHE 103 L	Chemistry for Engineers Lab	FC	0	0	2	1

LIST OF PRACTICAL EXPERIMENTS

1. Conductometric titration of HCl vs NaOH.
2. Standardization of potassium permanganate by Oxalic acid.
3. Iodometric Determination of Ascorbic Acid (Vitamin C).
4. Determination of hardness of water by EDTA method.
5. Determination of strength of given hydrochloric acid using pH meter.
6. Estimation of iron content of the given solution using potentiometer.
7. Determination of sodium and potassium by flame photometry.

REFERENCES

SEMESTER-I

Course Code	Course Name	Course Category	Credits			
			L	T	P	C
MAT 113	Calculus	FC	3	0	0	3

UNIT I: LIMIT, CONTINUITY, DERIVATIVE AND INTEGRALS OF SINGLE VARIABLE

Functions and Their Graphs, Limit of a function at a point and limit laws, Continuity of a function, Derivative of a function at a point, Various rules of Derivative, Definite and indefinite integral, Fundamental Theorem of Calculus.

UNIT II: APPLICATIONS OF CALCULUS (SINGLE VARIABLE)

Extreme Values of Functions, The Mean Value Theorem, Monotonic Functions, Concavity and Curve Sketching, Newton's Method to find roots, Area between curves, Arc length.

UNIT III: LIMIT, CONTINUITY, PARTIAL DERIVATIVES OF MULTI VARIABLES FUNCTION

three-dimensional rectangular coordinate systems, functions of several variables, limits and continuity for them, partial derivatives, the chain rule, directional derivatives, gradient.

UNIT IV: EXTREMA OF MULTI VARIABLES FUNCTION

Extreme values, Saddle points, Absolute Maxima and Minima on Closed Bounded Regions, Lagrange multipliers (Single Constraints).

UNIT V: MULTIPLE INTEGRALS

Double and Iterated Integrals over Rectangles, Double Integrals over General Regions. Area by Double Integration, Double Integrals in Polar Form, Triple Integrals in Rectangular Coordinates, Applications.

RECOMMENDED TEXT BOOK:

1. Thomas' Calculus, 14th Edition, Joel R. Hass, Christopher E. Heil, Maurice D. Weir, 2018.

Reference Books:

1. Introduction to Real Analysis 4th Edition, Robert G. Bartle, Donald R. Sherbert, 2014
2. Calculus and Analytic Geometry, 9th Edition, George B. Thomas, Jr. Ross L. Finney. 2017.

SEMESTER-I/SEMESTER II

Course Code	Course Name	Course Category	Credits			
			L	T	P	C
BIO 103	Introductory Biology for Engineers	FC	2	0	0	2

UNIT I: BIOMOLECULES

Why study Biology? Evolution of complex biomolecules and life on earth; Biomolecules - carbohydrates, lipids and fats, nucleic acids, proteins.

UNIT II: CELL BIOLOGY

Prokaryotic cell structure, Eukaryotic cell (Animal and Plant) - structure and functions of organelles; Diversity of life: virus, bacteria, archaea and eukarya

UNIT III: CELL PHYSIOLOGY

Membrane transport; Cellular respiration and energy generation; Brief account of Photosynthesis; Enzymes and their kinetics; Vitamins; Hormones

UNIT IV: MOLECULAR BIOLOGY

DNA and Chromosomes: structure and organization, Central Dogma- DNA replication, transcription and translation; Cell division – mitosis and meiosis; Mutations, Cancer, and genetic diseases.

UNIT V: BIOLOGICAL SEQUENCES AND DATABASES

Concept of genomics, transcriptomics, proteomics, and metabolomics; FASTA file format; Biological databases – NCBI; Applications of BLAST and protein/Gene ID conversion; Hands on experience in analyzing biological data using above mentioned tools

REFERENCE BOOKS:

1. Thrives in Biochemistry and Molecular Biology, Edition 1, 2014, Cox, Harris, Pears, Oxford University Press.
2. Thrives in Cell Biology, Ed. 1, 2013, Qiuyu Wang, Chris Smith and Davis, Oxford University Press.
3. iGenetics: A Molecular Approach by Peter J Russell, 3rd edition, Pearson International Edition.
4. Bioinformatics Introduction – Mark Gerstein.

SEMESTER-I/SEMESTER II

Course Code	Course Name	Course Category	Credits			
			L	T	P	C
ENV 111	Environmental Science	FC	2	0	0	2

UNIT I: ENVIRONMENTAL CRISIS AND SUSTAINABLE DEVELOPMENT

Need for environmental science studies, Fundamentals of ENV – Atmosphere, lithosphere, hydrosphere, biosphere. Global environmental crisis and its causes, Man-Environment relationship & interaction Ecological footprint, Sustainable development.

UNIT II: ECOSYSTEMS

Ecosystem - Structure and functions of an ecosystem, Energy flow in an ecosystem, biomass flow in an ecosystem, food chain and web, Ecological Succession, Ecological pyramid, Water cycle, Carbon cycle, Sulphur cycle, Nitrogen cycle, Forest ecosystems: tropical rain forest, coniferous forests, tundra forests, temperate forests, Grasslands and desert ecosystems, Aquatic ecosystems: Freshwater zones, streams, rivers, state of rivers in India, wetlands, Zones in ocean, ocean activities, coastal zones, Estuaries, Mangroves.

UNIT III: RENEWABLE AND NON-RENEWABLE RESOURCES

Energy resources: Global energy crisis, energy sources, energy needs, global energy consumption, Renewable and Non-renewable energy sources: Hydropower, Solar, tidal, wind, energy, Bioenergy, coal, natural gas, Energy resources: fossil fuel vs renewable fuels, peak oil, Conventional and unconventional oil, oil price determination, Environmental implications of Energy use: India and world, Energy use pattern – national and global, Water availability, Water for irrigation, water situation in India.

UNIT IV: BIODIVERSITY

Significance of biodiversity, Current state of biodiversity: National and global, Causes of biodiversity loss Biological hotspots, aquatic biodiversity, Endangered species and endemic species of India, Biodiversity conservation: Seed banks, botanical gardens, marine biodiversity protection, national and international efforts.

UNIT V: ENVIRONMENTAL POLLUTION AND CONTROL

Types of Environmental Pollution, Air pollution: Sources, effects, and control, Air standards, Air pollution in India and the world, Sources of air pollution, Outdoor & Indoor air pollution, Point source, mobile, area source, Effects of air pollution: Smog, urban heat island, ozone layer depletion, acid rain, Controlling air pollution: Emission regulation, e-cars, Water pollution: Sources & effects, Water Quality standards, Water pollutants, eutrophication, thermal pollution, bio-magnification, Wastewater treatment, Methods of water purification, Soil pollution: Sources, causes and effects, Control of soil pollution: Air purging, phytoremediation, and bio-remediation, Solid waste management, Types and sources of solid wastes, Hazardous waste, and electronic wastes, Recycling, and management of solid wastes (4Rs), Sanitary landfills and leachate management, Noise pollution: Sources, effects, and control, Air quality standards with respect to noise, Introduction to Climate change: Impact of climate change, IPCC assessment, Carbon footprint, carbon sequestration, carbon trade, carbon credits, Kyoto protocol, Montreal protocol, Paris agreement.

RECOMMENDED RESOURCES:

SEMESTER-I

Course Code	Course Name	Course Category	Credits			
			L	T	P	C
ISES 101	Industry Specific Employability Skills-I	SEC	3	0	0	1

UNIT I: QUANTS

Speed calculations, Time and Distance, Problems on Trains, Boats and Streams, Races and Games, Escalator Problems, Time and Work, Chain Rule, Pipes and cistern, Simplification, surds and indices, Square roots and cube roots, Functions.

UNIT II: REASONING

Number Series, Alphabet series, Odd Man Out, Missing number, Wrong number, Analogies, Mathematical Operations, Calendars, Clocks, Cryptarithmic, Identification of Cross-Variable Relation, Sudoku.

UNIT III: VERBAL

Basic sentence structure: Nouns, Pronouns, Adjectives. Parts of speech. Degree of comparison. Articles, conditionals, and sentences (kinds). Verb tense. Sentence formation. Paragraph formation, change of voice, Change of speech, Synonyms, Antonyms.

UNIT IV: COMMUNICATION SKILLS

Self-Introduction, Presentations, Email Etiquette

SEMESTER-I

Course Code	Course Name	Course Category	Credits			
			L	T	P	C
ENTR 100	Exploratory Learning & Discovery	SEC	0	0	2	1

Summery: The lost art of exploration is missing with most of the present generation. Exploration has been made synonymous with Google-ing online. Learning has become online where the entire world is becoming virtual. However, amongst all that perhaps the component of ‘fun’ and ‘satisfaction’ is missing and that is very much and very well reflected in the current generation of students.

To join the missing lines of the dots ENTR100, is designed for the young explorer where they will experience the real challenges and problems and after due understanding and reflection, they will synthesize the information into a logical and workable solution which can be practically applied to the original problem. Testing it, if needed and again redesign the solution after considering the feedback from the sample group of individuals who will be the prime users.

Lot of exciting games, which are exploratory in nature are a part of this program.

UNIT I: Exploration & Inventions

Basic concepts of innovation, structured exploration and quantifying the data and the experience gathered.

UNIT II: Summarizing Facts

Analysing the data and drawing a parallel between what is a theory and what can be practically applied.

UNIT III: Reflection, Synthesizing and ideating

Summarizing facts and designing a workable model, which can be applied and extensive market survey to validate the facts and figures

UNIT IV: Prototyping

Designing solutions based on the observations and facts gathered and synthesized.

TEXTBOOKS/REFERENCE BOOKS/OTHER READING MATERIAL

1. NA

SEMESTER-I

Course Code	Course Name	Course Category	Credits			
			L	T	P	C
IRH 101	Orientation on Internationalization	SEC	1	0	0	1

UNIT 1: Internationalization's Value, Considerations while selecting a foreign country for studies. When should students start preparing to study abroad? Benefits of International Study. Internationalization Possibilities from an Entrepreneurial Perspective.

UNIT 2: Programs for Global Immersion are Important. Why is it crucial? How it aids pupils in their abilities to adapt to a global environment. Expands their perspective on diversity, culture, tradition, and way of life.

UNIT 3: Internships Abroad, what are global internships and why are they important? Advantages of pursuing internships, How international internships prepare students for careers

UNIT4: Higher Studies & Foreign Languages, The goal of higher education - can include a wide range of elements. Success in the marketplace; societal service. Foreign language usage in India and abroad: scope. Foreign Language Careers, With the rise of globalization, various foreign languages are establishing themselves in India.

UNIT 5: Program for Student Exchange, Program for a Semester Abroad, Twinning Initiative
Program for Credit Transfer

SEMESTER-I

Course Code	Course Name	Course Category	Credits			
			L	T	P	C
CSE 108	Introduction to Computer Science and Programming Using C	FC	3	0	0	3

UNIT I: INTRODUCTION TO COMPUTER SCIENCE

Fundamentals of Computing, Historical perspective, Early computers. Computing machine. Basic organization of a computer: ALU, input-output units, memory, program counter - variables and addresses - instructions: store, arithmetic, input and output. Problem solving: Algorithm / Pseudo code, flowchart, program development steps Computer languages: Machine, symbolic and high-level languages Creating and Running Programs: Writing, editing (any editor), compiling (gcc), linking, and executing in Linux environment

UNIT II

C PROGRAMMING BASICS

Structure of a C program, identifiers Basic data types and sizes. Constants, Variables Arithmetic, relational and logical operators, increment and decrement operator's Conditional operator, assignment operator, expressions Type conversions, Conditional Expressions Precedence and order of evaluation, Sample Programs.

SELECTION & DECISION MAKING: if-else, null else, nested if, examples, multi-way selection: switch, else-if, examples.

ITERATION: Loops - while, do-while and for, break, continue, initialization and updating, event and counter controlled loops and examples.

UNIT III: FUNCTIONS AND ARRAYS

FUNCTIONS: User defined functions, standard library functions, Passing 1-D arrays, 2-D arrays to functions. Recursive functions - Recursive solutions for fibonacci series, towers of hanoi. C Pre-processor and header files.

ARRAYS: Concepts, declaration, definition, storing and accessing elements, one dimensional, two dimensional and multidimensional arrays, array operations and examples. Character arrays and string manipulations.

UNIT IV: POINTERS

Concepts, initialization of pointer variables, pointers as function arguments, passing by address, dangling memory, address arithmetic, character pointers and functions, pointers to pointers, pointers and multi-dimensional arrays, dynamic memory management functions, command line arguments.

UNIT V: ENUMERATED, STRUCTURE AND UNION TYPES

Structures - Declaration, definition, and initialization of structures, accessing structures, nested structures, arrays of structures, structures and functions, pointers to structures, self-referential structures. Unions, typedef, bit-fields, program applications. Bit-wise operators: logical, shift, rotation, masks.

FILE HANDLING: Concept of a file, text files and binary files, formatted I/O, file I/O operations and example programs.

TEXTBOOKS

1. R. G. Dromey, "How to Solve It By Computer", Pearson, 1982
2. The C programming Language by Brian Kernighan and Dennis Richie.

REFERENCES

4. Programming in C, B. L. Juneja, Anith Seth, First Edition, Cengage Learning.

SEMESTER-I

Course Code	Course Name	Course Category	Credits			
			L	T	P	C
CSE 108 L	Introduction to Computer Science and Programming Using C Lab	FC	0	0	2	1

LIST OF PRACTICAL EXPERIMENTS

1. Week-1: Basic C programs

- Calculation of the area of triangle.
- Swap two numbers without using a temporary variable.
- Find the roots of a quadratic equation.
- Takes two integer operands and one operator from the user, performs the operation and then prints the result.

2. Week-2: Loops

- Find the sum of individual digits of a positive integer and find the reverse of the given number.
- Generate the first n terms of Fibonacci sequence.
- Generate all the prime numbers between 1 and n, where n is a value supplied by the user.
- Print the multiplication table of a given number n up to a given value, where n is entered by the user.

3. Week-3: Loops

- Decimal number to binary conversion.
- Check whether the given number is Armstrong number or not.
- Triangle star patterns

<pre> * </pre>	<pre> * * * * * * * * * * </pre>	<pre> * </pre>
I	II	III

4. Week-4: Arrays

- Interchange the largest and smallest numbers in the array.
- Searching an element in an array
- Sorting array elements.

5. Week-5: Matrix

- Transpose of a matrix.
- Addition and multiplication of 2 matrices.

6. Week-6: Functions

- (nCr) and (nPr) of the given numbers
- $1+x+x^2\backslash 2+x^3\backslash 3!+x^4\backslash 4!+.....X^n\backslash n!$

7. **Weak-7:** Functions and array
 - a. Function to find both the largest and smallest number of an array of integers.
 - b. Linear search.
 - c. Replace a character of string either from beginning or ending or at a specified location.
8. **Weak-8:** Pre-processor directives
 - a. If Def
 - b. Undef
 - c. Pragma
9. **Weak-9:** Structures
 - a. Reading a complex number
 - b. Writing a complex number.
 - c. Addition of two complex numbers
 - d. Multiplication of two complex numbers
10. **Weak-10:** String operations without using the built-in functions
 - a. Concatenate two strings
 - b. Append a string to another string.
 - c. Compare two strings
 - d. Length of a string
 - e. Find whether a given string is palindrome or not
11. **Weak-11:** Pointers
 - a. Illustrate call by value and call by reference.
 - b. Reverse a string using pointers
 - c. Compare two arrays using pointers
12. **Weak-12:** Pointers and array
 - a. Array of Int and Char Pointers.
 - b. Array with Malloc(), calloc() and realloc().
13. **Weak-13:** Recursion
 - a. To find the factorial of a given integer.
 - b. To find the GCD (greatest common divisor) of two given integers.
 - c. Towers of Hanoi
14. **Weak-14:** File Operations
 - a. File copy
 - b. Word, line and character count in a file.
15. **Weak-15:** Command line arguments
 - a. Merge two files using command line arguments.

SEMESTER-II

SEMESTER-II

Course Code	Course Name	Course Category	Credits			
			L	T	P	C
MAT 211	Linear Algebra	FC	3	0	0	3

UNIT I: VECTOR SPACE

Elimination, LU factorization, null-spaces and other subspaces, bases and dimensions, vector spaces, complexity.

UNIT II: FACTORIZATION

Orthogonality, projections, least-squares, QR, Gram–Schmidt, orthogonal functions.

UNIT III: MATRICES

Eigenvectors, determinants, similar matrices, Markov matrices, ODEs, symmetric matrices, definite matrices.

UNIT IV: ITERATIVE METHODS

Defective matrices, SVD and principal-components analysis, sparse matrices and iterative methods, complex matrices, symmetric linear operators on functions.

UNIT V: APPLICATIONS

Matrices from graphs and engineering.

TEXTBOOKS

1. G. Strang, Linear Algebra and Its applications, Nelson Engineering, 4th Edn., 2007.
2. K. Hoffman and R. Kunze, Linear Algebra, Prentice Hall of India, 1996.

REFERENCES

1. S. Axler, Linear Algebra Done Right, 2nd Edn., UTM, Springer, Indian edition, 2010.
2. G. Schay, Introduction to Linear Algebra, Narosa, 1997.

SEMESTER-II

Course Code	Course Name	Course Category	Credits			
			L	T	P	C
MAT 141	Discrete Mathematics	CC	3	0	0	3

UNIT I: THE FOUNDATIONS: LOGIC AND PROOFS

Propositional Logic, Applications of Propositional Logic, Propositional Equivalences, Predicates and Quantifiers, Nested Quantifiers, Rules of Inference, Introduction to Proofs, Methods and Strategy.

UNIT II: SET THEORY, INDUCTION AND RECURSION

Laws of set theory, Set Operations, Functions, Mathematical induction, Strong induction and Well-ordering, Recursive definitions

UNIT III: ELEMENTARY NUMBER THEORY

Divisibility and Modular Arithmetic, Integer Representations and Algorithms, Primes and Greatest Common Divisors, Solving Congruences,.

UNIT IV: COUNTING PRINCIPLES

The Basics of Counting, The Pigeonhole Principle, Permutations and Combinations, Binomial Coefficients and Identities, Applications of Recurrence Relations, Solving Linear Recurrence Relations, Divide and-Conquer Algorithms and Recurrence Relations

UNIT V: INTRODUCTION TO GRAPH THEORY

Graphs, Graph Terminology and Special Types of Graphs, Representing Graphs and Graph Isomorphism, Connectivity, Euler and Hamilton Paths, Shortest-Path Problems.

TEXTBOOKS

1. Kenneth H. Rosen, Discrete Mathematics and Applications, Seventh edition, Tata McGraw-Hill, 2012.
2. J. P. Tremblay and R. P. Manohar, Discrete Mathematics with Applications to Computer Science, Tata McGraw-Hill, 1997.
3. Harry Lewis and Rachel Zax, Essential Discrete Mathematics for Computer Science.
4. Bernard Kolman and Robert C. Busby, Discrete Mathematical Structures for Computer Science.

SEMESTER-II

Course Code	Course Name	Course Category	Credits			
			L	T	P	C
EEE 103	Basics of Electrical and Electronics Engineering	FC	3	0	0	3

UNIT I: BASIC CIRCUIT ANALYSIS

Ohm's Law, Kirchhoff's Laws, Concept of Node, Path, Loop, Branch, Mesh. Voltage and Current Division, Ideal and Practical Voltage and Current Source, Dependent Voltage and Current Sources, Source Transformations. Nodal Analysis and Super node - Presence of independent voltage and current sources. Mesh Analysis and Super mesh - Presence of independent voltage and current sources.

UNIT-II: NETWORK THEOREMS

Introduction to network theorems, Superposition Theorem, Thevenin Theorem, Norton Theorem, Maximum Power Transfer Theorem.

UNIT-III: SINGLE-PHASE AND THREE PHASE AC CIRCUITS

Basic Concepts Related to Generation of Sinusoidal AC Voltage. Definition and Numerical values of Average Value, Root Mean Square Value, Form Factor and Peak Factor for sinusoidal varying quantities. Steady State Analysis of Pure R, L, C Circuits. Steady State Analysis of RL and RC Series Circuits with Phasor Diagrams. Definitions of Real Power, Reactive Power, Apparent Power, and Power Factor. Concepts of Resonance. Necessity and advantages of three phase systems, generation of three phase power. Definition of Phase sequence, balanced supply, and balanced load. Relationship between line and phase values of balanced star and delta connections.

UNIT IV: SEMICONDUCTOR DEVICES AND CIRCUITS

Semiconductors basics, PN junction diode structure, Forward and reverse bias operation and characteristics of PN junction diode, Half-wave, full wave, bridge rectifiers, clipping circuits using PN junction diode, Bipolar junction transistors (BJTs) structure and operation, common-base, common-collector, and common-emitter configurations using BJTs, MOSFET structure, 3 modes of operation, CG, CS, CD basics with I-V characteristics.

UNIT V: BASIC ANALOG, DIGITAL CIRCUITS, AND APPLICATIONS

Characteristics of an operational amplifier and Definitions of characteristics, Inverting and non-inverting op-amps, summing amplifier, Difference amplifier, Integrator and differentiator design using op-amp, Op Amp Applications as Voltage to Current Converter and Current to Voltage converters, Low and high frequency noise in electronic circuits, basic low-pass, high-pass, band-pass and band-reject passive filters design using resistor, capacitor and inductor, Introduction to Digital vs analog signals and systems, Digital logic representations with Noise margins definition, Binary Number system, Review of Logic gates: AND, OR, NOT, NAND, NOR, X-OR, X-NOR Boolean expression and Truth Tables, Combinational vs Sequential circuits with examples from practical applications.

SEMESTER-II

Course Code	Course Name	Course Category	Credits			
			L	T	P	C
ISES 102	Industry Specific Employability Skills-II	SEC	3	0	0	1

UNIT I: QUANTS

Average, Alligation or Mixture, Alligation or Mixture, Percentage, Profit and Loss, True discount, Partnership, Height and distance.

UNIT II: REASONING

Logical deductions, Syllogism, Image based problems, Coding and Decoding, Cubes and Cuboids, Inequalities, Input output tracing.

UNIT III: VERBAL

Ordering of sentences, Comprehension, Verbal Analogies, Essential parts of a sentence, One-word substitutes, Cause and effect, Syllogism.

UNIT IV: COMMUNICATION SKILLS

Sentence formation (Practical), Word group categorization, Casual conversation (Practical), Formal conversation (interpersonal)

SEMESTER-II

Course Code	Course Name	Course Category	Credits			
			L	T	P	C
CSE 130	Industry Standard Coding Practice - I	SEC	0	0	4	2

UNIT I

Problem solving through Competitive Coding, Problem solving using control structures, Numeric series and patterns, Code Complexity analysis, Linear/ Logarithmic/ Super linear/ Polynomial/ Exponential/ Factorial Algorithms, Problem solving on rotations of data, Problem solving on Order statistic problems, Problem Solving Examples Problem solving on matrix data, Memory manipulation techniques using pointers.

Memory Arithmetic, Problem solving implementing pointer to an array, Memory Layout, overcoming the segmentation faults, Runtime memory allocation, Coding comparisons of Linear list data structure and Pointers, examples and Practice problems.

UNIT II

Problem solving on string data, Problem solving on String manipulations, coding problems using string handling functions, Problem solving on Multi-String Problems, Problem Solving for long strings, Examples, Practice problems. Problem solving using modular programming, Inter module communications, scopes of data in the code, Problem solving approaches using recursions, Evaluation of Recursive algorithms, Significance of mathematical Recurrence Relations, Evaluation of recurrence relations, Time Analysis, Examples, Practice problems.

UNIT III

Requirement of User-Defined data, Problem solving implementing structures, Nested Structures, Unions, Enumeration, Usage of Preprocess statements in coding problems, Examples, Practice Problems Structure member reference, member pointer reference, Coding to form links, Example codes, Problem solving on operational and traversal logics on linked lists, Problem solving to compare linked lists, detection of a cycle/merge point, Merging sorted linked lists, coding problems on circular linked lists/Double linked lists, Examples, Practice problems.

UNIT IV

Problem Solving Problem solving through Linked list coding, traversals, Problem solving to compare linked lists, detection of a cycle/merge point, Merging sorted linked lists, Circular linked list formation, Double linked list formation, Examples, Practice problems.

UNIT V

Problem solving through testing, implementing various testing approaches: Test strategy, Test development, Test execution, Bug fixing, Examples, Practice problems, Problem solving Methods and techniques. Understanding the problem as math abstract, formation of the logic, Identifying the corner cases, Examples, Practice problems, Version control systems, Git repositories and working trees, adding new version of the files to a Git repository, Examples, practice problems.

SEMESTER-II

Course Code	Course Name	Course Category	Credits			
			L	T	P	C
CSE 109	Data Structures - I	FC	3	0	0	3

UNIT I: INTRODUCTION

Introduction and Definition of Data Structure, Classification of Data Structure, Pseudocode, Flowcharts, Algorithm Description, Sub-Algorithms, Recursion, Basic Analysis of Algorithms - Random Access Machine Model, efficiency of algorithms, notion of time complexity, space complexity, Time-Space trade-off, Expressing Space-Time Complexity, big-Oh notation.

UNIT II: ARRAYS AND LINKED LIST

Arrays: Representation of Arrays in Memory, Array operations: insertion deletion, Introduction, Limitations of Array, Linked List: Representation and Operations of Linked Lists: Insertion and deletion at various positions, searching, Doubly Linked List, Circular Linked List, and Circular Doubly Linked List. Dispose a linked list.

UNIT III: STACK AND QUEUE

Stack: Introduction to Stack, Definition, Stack Implementation, Operations of Stack, Applications of Stack: Parenthesis checker, Recursive function call. Linked List representation and operations of stack. Dispose a Stack.

Queues: Introduction to Queue, Linear Queue Implementation, Operations of Queue: enqueue, dequeue, Circular Queue, Enqueue and Dequeue operations of circular Queue, Priority Queue, Linked List representation and operations of Queue. Dispose a Queue.

UNIT IV: TREES

Introduction to Tree, Tree Terminology, Full Binary Tree, Complete Binary Tree, Binary Tree and its Properties, Representation of Binary Tree.

Binary Search Tree, Array and linked list representation of Binary Search Tree, Creation and Traversal of Binary Search Tree, Traversing Binary Search Tree: in-order, pre-order, post-order, and level-order. Determining height, no of internal, external, and total no. of nodes in Binary Search Tree. Binary Search Tree Operations: insertion, deletion, finding smallest and largest node. Determining Mirror Image. Heaps, Operations on Heaps: insertion and deletion.

UNIT V: SEARCHING AND SORTING

Searching: Types of searching, linear search, binary search, Sorting: Types of sorting, selection sort, insertion sort, bubble sort, quick sort, merge sort.

TEXTBOOKS

SEMESTER-II

Course Code	Course Name	Course Category	Credits			
			L	T	P	C
CSE 109 L	Data Structures – I Lab	FC	0	0	2	1

LIST OF PRACTICAL EXPERIMENTS

Sl. No	Problem Description
1	Insert and delete element in an single dimensional integer array. Implement search an integer in an array. String operation e.g. string copy, string comparison and string length without library function. Sparse matrix implementation using multidimensional array Sparse matrix implementation using linked list.
2	Operations on singly link list using functions. (Creation, insertion, deletion) Perform operation on a linked list such as adding all elements of the list, find repeated words in the list. Operations on Doubly linked list (<i>Creation, insertion, deletion</i>) Circular linked list (<i>Creation, insertion, deletion</i>)
3	Operations of Stack as ADT (<i>Push, Pop, Empty</i>) Operations of Queue as ADT (<i>Push, Pop, Empty</i>) Operations of Stack as ADT (<i>Push, Pop, Empty</i>) Operations of Queue as ADT (<i>Push, Pop, Empty</i>)
4	Create a binary tree from a given list of elements. Implement tree traversal. Recursive (in-order, pre-order and post-order) Implement tree traversal. Iterative (in-order, pre-order and post-order) Infix to post fix and infix to prefix conversion of expressions
5	Implement in-place sorting algorithm. Bubble, insertion, selection sort. Implement divide and conquer algorithms. Merge and quick Implementation of Hashing. Implement binary search

SEMESTER-III

SEMESTER-III

Course Code	Course Name	Course Category	Credits			
			L	T	P	C
MAT 131	Differential Equations	CC	3	0	0	3

UNIT I: FIRST ORDER DIFFERENTIAL EQUATIONS

Geometric meaning of $y'=f(x, y)$, Direction Fields, Euler's Method, Classification of ODEs (Linear, Non-linear, Exact, Separable, Integrating Factor, Bernoulli Equations, Initial Value Problem, Modelling (Free falling object, Radioactivity, RL-circuit).

UNIT II: SECOND AND HIGHER ORDER LINEAR ODES

Homogeneous Linear ODEs, Modelling of Free Oscillations of a Mass-Spring System, Euler-Cauchy Equations, Non-homogeneous ODEs, Variation of Parameters, Modelling (Forced Oscillations, Electric Circuits)

UNIT III: SYSTEM OF ODES

Modelling Engineering problems (Electric Network, Mixing problem in two tanks etc.) as systems of ODEs, Wronskian, Phase-Plane Method, Critical Points & Stability, Qualitative Methods for Nonlinear Systems, Nonhomogeneous Linear Systems of ODEs.

UNIT IV: SERIES SOLUTIONS OF ODES

Introduction to power series method, Legendre's equation & polynomials, Frobenius Method, Bessel's Equations & Functions

UNIT-V: LAPLACE TRANSFORMS

Laplace transforms of standard functions, Shifting Theorems, transforms of derivatives and integrals, Unit step function, Dirac's delta function, Inverse Laplace transforms, Convolution theorem (without proof), Application: Solutions of ordinary differential equations using Laplace transforms.

TEXTBOOKS

1. William Boyce and Richard DiPrima, Elementary Differential Equations and Boundary Value Problems, 11th Edition, Wiley-India.
2. Erwin Kreyszig Advanced Engineering Mathematics, 10th Edition, Wiley-India.
3. Mary L. Boas, Mathematical Methods in Physical Sciences, 3rd Edition, Wiley-India.

REFERENCES

1. Mary L. Boas, Mathematical Methods in Physical Sciences, 3rd Edition, Wiley-India.

SEMESTER-III/ SEMESTER IV

Course Code	Course Name	Course Category	Credits			
			L	T	P	C
ECO 121	Principles of Economics	FC	3	0	0	3

UNIT I: INTRODUCTION TO ECONOMICS

Why study economics? Scope and method of economics; the economic problem: scarcity and choice; the question of what to produce, how to produce and how to distribute the output. Types of Economic Systems.

UNIT II: DEMAND AND SUPPLY

Determinants of individual demand/supply; demand/supply schedule and demand/supply curve; market versus individual demand/supply. Shifts in the demand/supply curve, demand, and supply together. How prices allocate resources, elasticity, and their application. How prices allocate resources, elasticity, and their application. Controls on prices; taxes and the costs of taxation. Consumer surplus; producer surplus and the efficiency of the markets.

UNIT III: CONSUMER THEORY

The consumption decision - budget constraint. Consumption, and income/price changes. Demand for all other goods and price changes. Indifference curves; properties of indifference curves. Utility and preferences. Consumer 's optimum choice. Income and substitution effects.

UNIT IV: PRODUCER THEORY

Production, short-run production function and returns to factor. Average-marginal relationship. Long-run production function and laws of return to scale- the role of technology. Cost function and cost structure of a firm in the short- run and long run.

UNIT V: TYPES OF MARKET

Perfect competition -features. Profit maximization. Monopoly: Features; Profit maximization. Price discrimination. Monopolistic competition and Product differentiation.

TEXTBOOKS

1. Principles of microeconomics, N. Gregory Mankiw, Publisher: Cengage Learning
2. Karl E. Case and Ray C. Fair, Principles of Economics, Pearson Education Inc.,

SEMESTER-III/SEMESTER IV

Course Code	Course Name	Course Category	Credits			
			L	T	P	C
MAT 221	Probability and Statistics for Engineers	FC	3	0	0	3

UNIT I

Basic principle of counting, permutations, combinations, Multinomial coefficients, sample space and events, Axioms of probability, sample spaces having equally likely outcomes, Conditional probability, Bayes` theorem, independent events.

UNIT II

Random variable, discrete random variable, expected value, expectation of a function of a random, variable, variance, discrete probability distributions- Bernoulli, Binomial, Poisson, Geometric, negative, Binomial distributions, expected value of sums of random variables, cumulative distribution function and its properties.

UNIT III

Continuous random variables, Expectation and variance – their properties, Continuous probability, distributions – uniform, normal, exponential distributions, Distribution functions.

UNIT IV

Joint distribution functions, Independent random variables and their sums, conditional distributions, Joint probability distribution of functions of random variables, covariance, correlation.

UNIT V

Definition of statistics, population and sample, Representative sample, Descriptive statistics – classification and tabulation of univariate data, Graphical representation, frequency curves.

TEXTBOOKS

1. Sheldon Ross, A First course in probability (Ninth edition).

REFERENCES

1. Michael Baron, Probability and Statistics for computer scientistst.

SEMESTER-III

Course Code	Course Name	Course Category	Credits			
			L	T	P	C
ISES201	Industry Specific Employability Skills-III	SEC	3	0	0	1

UNIT I: QUANTS

Numbers, Problems on numbers (Divisibility, power cycle, remainder cycle), Problems on ages, Problems on HCF and LCM, Simple interest, compound interest, Data interpretation (Charts, tables, pie charts, lines).

UNIT II: REASONING

Direction sense, Direction sense, Logical order, Analytical reasoning, Passage and inference, Selection decision table, Attention to details, Seating arrangements

UNIT III: VERBAL

Spellings, Selecting words, Spotting errors, Ordering of words, Sentence correction, Sentence improvement, Synonyms, Antonyms.

UNIT IV: COMMUNICATION SKILLS

Topic wise discussion, Group discussion, Debate, Presentations.

SEMESTER-III

Course Code	Course Name	Course Category	Credits			
			L	T	P	C
CSE 231	Industry Standard Coding Practice -II	SEC	0	0	4	2

UNIT-I

Problem solving using Stacks, Coding solutions for the implementation of stack using an array, Coding solutions for the implementation of stack using a linked list, Problem solving on expression conversion and evaluations, Examples, Practice Problems.

UNIT-II

Search operations implementing linear/binary search, Bubble Sort, Selection Sort, Insertion Sort, Evaluation of sorting Algorithms. Problem solving using Quick Sort, Merge Sort, $O(n \log n)$ algorithms, Examples, Practice problems.

UNIT-III

Problem solving approaches using Non-linear data structures, Coding problems on the height of a binary tree, Size of a binary tree, Tree order traversals, Problem Solving on Binary Trees, Problems solving on key search on binary search trees, Time comparison and analysis on Binary Search Trees, Coding on a binary search tree problems, Search/probe sequence validation, Examples, Practice problems.

UNIT-IV

Industry Standards of leveraging DBMS concepts: SQL Queries, Entity Relationship Models, Question and answers, Query Optimization, Transactions & Concurrency, Normalization, case studies, Question and answers Examples, Practice problems.

UNIT-V

Problem solving approaches with problem setter's mind set, Creating edge cases, Constraints for the test cases, I/O Faults, Examples, Practice problems. Problem solving Methods and techniques: Encoding methods, Handling faults within the code, Examples, Practice problems. Push a branch to GitHub, creating a pull request, Merging a pull request, Get back the changes from Github, Examples, Practice Questions.

SEMESTER-III

Course Code	Course Name	Course Category	Credits			
			L	T	P	C
CSE 206	Object Oriented Programming using C++	CC	3	0	0	3

UNIT I: INTRODUCTION

What is object-oriented programming? Comparison of procedural programming and Object-Oriented Programming - Characteristics of Object-Oriented Languages - C++ Programming Basics: Basic Program Construction - Data Types, Variables, Constants - Type Conversion, Operators, Library Functions - Loops and Decisions, Structures - Functions: Simple Functions, passing arguments, Returning values, Reference Arguments. - Recursion, Inline Functions, Default Arguments - Storage Classes - Arrays, Strings, Addresses, and pointers. Dynamic Memory management. Linked lists in C++.

UNIT II: FEATURES OF OBJECT-ORIENTED PROGRAMMING

Introduction to Classes and Objects, Making sense of core object concepts (Encapsulation, Abstraction, Polymorphism, Classes, Messages Association, Interfaces). Constructors and its types, Destructors - Passing Objects as Function arguments and Returning Objects from Functions.

UNIT III: POLYMORPHISM

Concept of Polymorphism, Function overloading, examples and advantages of function overloading, pitfalls of function overloading, Operator overloading, Overloading unary operations. Overloading binary operators, pitfalls of operators overloading.

UNIT IV: INHERITANCE

Concept of inheritance. Derived class and based class. Derived class constructors, member function, inheritance in the English distance class, class hierarchies, inheritance and graphics shapes, public and private inheritance, aggregation: Classes within classes, inheritance, and program.

UNIT V: TEMPLATES AND EXCEPTIONS

Templates: Function templates, Class templates - Exceptions: Need of Exceptions, keywords, Simple and Multiple Exceptions - Re-throwing Exception and Exception Specifications, Custom Exception. Standard Template Library: Containers, Algorithms, iterators - potential problems with STL - Algorithms: find (), count (), sort (), search (), merge () - Function Objects: for each (), transform () - Sequence Containers: vectors, Lists, Dequeues - Iterators and specialized.

TEXTBOOKS

1. C++ Primer, Stanley B. Lippman, Stanley Lippman and Barbara Moo, Addison-Wesley Professional, Fifth edition, 2012.
2. C++: The complete reference, Schildt, Herbert. McGraw-Hill/Osborne, Fourth edition, 2017.

REFERENCES

1. Thinking in C++, Bruce, Eckel, Pearson, Second edition, Volume 1, 2002.
2. Object-oriented programming in C++, Robert Lafore, Course Sams Publishing, Fourth edition, 2001.
3. Lischner, Ray. STL Pocket Reference: Containers, Iterators, and Algorithms. " O'Reilly Media, Inc.", 2003.

SEMESTER-III

Course Code	Course Name	Course Category	Credits			
			L	T	P	C
CSE 206 L	Object Oriented Programming using C++ Lab	CC	0	0	2	1

LIST OF PRACTICAL EXPERIMENTS

Week-1:

1. Takes two integer operands and one operator form the user, performs the operation and then prints the result.
2. Generate all the prime numbers between 1 and n, where n is a value supplied by the user.
3. Searching an element in an array.
4. To find the factorial of a given integer.

Week-2:

1. Write a program to demonstrate the Inline functions.
1. Programs to understand different function call mechanism.
 - a. call by reference
 - b. call by value
1. Programs to understand storage specifiers

Week-3:

1. Write a Program to design a class having static member function Named showcount() which has the property of displaying the number of objects created of the class.
1. Write a Program using class to process Shopping List for a Departmental Store. The list include details such as the Code No and Price of each item and perform the operations like Adding, Deleting Items to the list and Printing the Total value of a Order.

Week-4:

1. Write a Program which creates & uses array of object of a class.(for eg. implementing the list of Managers of a Company having details such as Name, Age, etc..).
1. Write a Program to find Maximum out of Two Numbers using friend function. Note: Here one number is a member of one class and the other number is member of some other class.

Week-5:

1. Write a Program to swap private data members of classes Named as class_1, class_2 using friend function.
1. Write a Program to design a class complex to represent complex numbers. The complex class should use an external function (use it as a friend function) to add two complex numbers. The function should return an object of type complex representing the sum of two complex numbers.

Week-6:

1. Write a Program using copy constructor to copy data of an object to another object.
1. Write a Program to allocate memory dynamically for an object of a given class using class's constructor.

Week-7:

1. Write a Program to design a class to represent a matrix. The class should have the functionality to insert and retrieve the elements of the matrix
1. Write a program to design a class representing complex numbers and having the functionality of performing addition & multiplication of two complex numbers using operator overloading.

Week-8:

1. Write a Program to overload operators like *, <<, >> using friend function. The following overloaded operators should work for a class vector.

1. Write a program for developing a matrix class which can handle integer matrices of different dimensions. Also overload the operator for addition, multiplication & comparison of matrices.

Week-9:

1. Write a program to overload new/delete operators in a class.
1. Write a program in C++ to highlight the difference between overloaded assignment operator and copy construct.

Week-10:

1. Write a Program illustrating how the constructors are implemented and the order in which they are called when the classes are inherited. Use three classes Named alpha, beta, gamma such that alpha, beta are base class and gamma is derived class inheriting alpha & beta
1. Write a Program to design a student class representing student roll no. and a test class (derived class of student) representing the scores of the student in various subjects and sports class representing the score in sports. The sports and test class should be inherited by a result class having the functionality to add the scores and display the final result for a student.

Week-11:

1. Write a program to maintain the records of person with details (Name and Age) and find the eldest among them. The program must use this pointer to return the result.
1. Write a Program to illustrate the use of pointers to objects which are related by inheritance.

Week-12:

1. Write a program illustrating the use of virtual functions in class.
1. Write a program to design a class representing the information regarding digital library (books, tape: book & tape should be separate classes having the base class as media). The class should have the functionality for adding new item, issuing, deposit etc. the program should use the runtime polymorphism.

Week-13:

1. Write a program to show conversion from string to int and vice-versa.
1. Write a program showing data conversion between objects of different classes.

Week-14:

1. Write a program showing data conversion between objects of different classes and conversion routine should reside in destination class.
1. Write a program to copy the contents of one file to another.

Week-15:

1. Write a program to implement the exception handling.
1. Write a program to maintain the elementary database of employee using file concepts.

SEMESTER-III

Course Code	Course Name	Course Category	Credits			
			L	T	P	C
ECE 211	Digital Electronics	CC	2	1	0	3

UNIT I: DIGITAL FUNDAMENTALS

4 and 5 variable K-maps, 1's and 2's complements. Codes – Binary. BCD, Excess 3. Gray, Alphanumeric codes. Sum of products and product of sums. Min terms and Maxterms. Quine-McCluskey method of minimization.

UNIT II: COMBINATIONAL CIRCUIT DESIGN

4-bit Adder and Subtractor. Binary Parallel Adder – Carry look ahead adder BCD Adder. Multiplexer. Demultiplexer. Magnitude Comparator. Decoder. Encoder. Priority Encoder.

UNIT III: SYNCHRONOUS SEQUENTIAL CIRCUITS

Flip flops – SR, JK, T, D, Master/Slave FF – operation and excitation tables. Triggering of FF. Analysis and design of clocked sequential circuits Design – Moore/Mealy models. State minimization. State assignment. Circuit implementation – Design of Counters. Ripple Counters- Ring Counters. Shift Registers. Universal Shift Register.

UNIT IV: ASYNCHRONOUS SEQUENTIAL CIRCUITS

Stable and Unstable states. Output specifications. Cycles and races. State reduction. Race free assignments. Hazards. Essential Hazards. Pulse mode sequential circuits. Design of Hazard free circuits.

UNIT V: MEMORY DEVICES

Classification of memories – ROM – ROM organization – PROM – EPROM – EEPROM – EAPROM. RAM – RAM organization – Write operation – Read operation – Programmable Logic Devices – Programmable Logic Array (PLA) – Programmable Array Logic (PAL) – Field Programmable Gate Arrays (FPGA) – Implementation of combinational logic circuits using ROM. PLA. PAL.

SEMESTER-III

Course Code	Course Name	Course Category	Credits			
			L	T	P	C
ECE 211 L	Digital Electronics Lab	CC	0	0	2	1

LIST OF PRACTICAL EXPERIMENTS

1. Realization of Basic Logic Gates.
2. Design of Code Converters (Binary to Gray) & (Gray to Binary).
3. Design of
 - a. Half-Adder/Subtractor
 - b. Full-Adder/Subtractor
 - c. Multiplexers/De Multiplexers
 - d. ALU Design
4. Design of Decoder and Encoder/ BCD 7SSD.
5. Design of Magnitude Comparator (2-bit).
6. Design and Verification of Flip-Flops using IC.
7. Design of Asynchronous Counter (Any Mod, Up and Down, Jhonson and Ring).
8. Design of Synchronous Counter (Any Mod, Decade counter 74ls90).
9. Design of Universal Shift Register (Serial to Parallel, Parallel to Serial.
10. Serial to Serial and Parallel to Parallel Converters).
11. Design & Verification of Memory (SRAM).
12. FSM Based Design Project.

SEMESTER-III

Course Code	Course Name	Course Category	Credits			
			L	T	P	C
CSE 209	Data Structures-II	CC	0	0	4	2

UNIT I: REVISITING LINEAR DATA STRUCTURES

Application of Linked List: Polynomial Addition, Polynomial Multiplication. Maps and Dictionaries: Map ADT – List based Implementation – Dictionary.

Mathematical Notation Translation: infix, postfix, infix to postfix, Evaluating Mathematical Expression. Multiple Stacks. Implementation of Multiple Stack.

Priority queues: Implementing Priority Queue using List, Multiple queues, Implementation of Multiple queue

UNIT II: ADVANCED SEARCHING AND SORTING TECHNIQUES

Hashing: Hash function, types of hash functions, Collision, Collision Resolution Technique (CRT), Perfect Hashing.

External Sorting: Storage Devices: Magnetic Tapes and Disk Storage, Sorting with Disks: K-Way Merging, Buffer Handling for Parallel Operation, Sorting with Tapes: Balanced Merge Sort, Polyphase Merge.

UNIT II: ADVANCED TOPICS ON TREES

Threaded Binary Tree, Traversal of Threaded Binary Tree, Operations on a Threaded Binary Search Tree: Insertion, deletion, finding largest element, Deleting Threaded Binary Tree.

AVL Trees: Height of AVL Tree, Operations on an AVL Tree: insertion, deletion.

m-Way search tree: Index and Searching,

B-Tree, Operations on B-Tree: Searching, Inserting, Deleting from a B-Tree,

B⁺ Tree, Operations on B⁺-Tree: Searching, Inserting, Deleting from a B⁺-Tree,

B* tree.

UNIT IV: GRAPHS

Graph Terminology, Representation of Graphs: Adjacency Matrix and Adjacency List, Operations on a Graph: creation, addition, and deletion of nodes. Graph traversals: BFS and DFS, Topological Sort, Minimal Spanning Tree: Prim's Algorithm, Kruskal Algorithm,

UNIT V: ADVANCED TOPICS ON GRAPHS

Finding Shortest Paths: Shortest Path for a given Source and Destination, Shortest path among all-pair of vertices, Directed Acyclic Graphs, Hamiltonian cycle, Euler's circuits. Graph Colouring, Bipartite Graph.

TEXTBOOKS

1. “Data Structure -- A Pseudo code approach with C” by Richard R. Gilberg & Behrouz A. Forouzan, 2nd edition, 2011. Cengage Learning. Imprint: Thomson Press (India) Ltd.
2. “Data Structures Using C” by Aaron M. Tanenbaum, Yedidvah Langsam, and Moshe J. Augenstein. Pearson Publishers, 2019.

REFERENCES

3. Programming with C, Byron Gottfried, McGraw hill Education, Fourteenth reprint, 2016.

7. G. A. V. Pai: “Data Structures & Algorithms; Concepts, Techniques & Algorithms” Tata McGraw Hill.

SEMESTER-III

Course Code	Course Name	Course Category	Credits			
			L	T	P	C
CSE 209 L	Data Structures – II Lab	CC	0	0	2	1

LIST OF PRACTICAL EXPERIMENTS

Sl. No	Problem Description
1	Implementation of Polynomial Addition Polynomial Multiplication. Infix to postfix conversion Evaluation of expressions
2	Implement find kth largest, heap sort.
3	Compute height of a binary tree. Construct a threaded binary tree Implement operations of m-way search tree (with m = 4) Implement B tree.
4	Implement priority queue Implement operations of AVL tree Implement undo operation in an text editor
5	Implement graph representation using adjacency matrix Implement weighted graph representation using sparse matrix Implement BFS and DFS traversal of graph Implement Prims and Kruskal's algo for MST.

SEMESTER-III

Course Code	Course Name	Course Category	Credits			
			L	T	P	C
CSE 106 L	Hands on Using Python	CC	0	0	4	2

LIST OF PRACTICAL EXPERIMENTS

Decision Making Control

- Write a Python program to find the distance between two coordinate points (x1, y1) and (x2, y2).
- Write a Python program to input Percentage. Calculate percentage and grade according to following:

Percentage	>=	90%	:	Grade	A
Percentage	>=	80%	:	Grade	B
Percentage	>=	70%	:	Grade	C
Percentage	>=	60%	:	Grade	D
Percentage	>=	40%	:	Grade	E

 Percentage < 40% : Grade F
- Write a Python program to find maximum between three numbers.
- Write a Python program that computes the real roots of a quadratic function. Your program should begin by prompting the user for the values of a, b and c. Then it should display a message indicating the nature of real roots, along with the values of the real roots (if any).
- Write a program to input angles of a triangle and check whether triangle is valid or not. Also, validate the angles entered by the user. (Sum of the three angles of triangle is 180°)
- Write a program to input basic salary of an employee and calculate its Gross salary according to following:

Basic Salary	<=	10000	:	HRA	=	20%,	DA	=	80%
Basic Salary	<=	20000	:	HRA	=	25%,	DA	=	90%

 Basic Salary > 20000 : HRA = 30%, DA = 95%

Looping Control

- Write a Python program to print the sum of the series $1/2 + 1/3 + 1/4 + \dots + 1/N$. Where N is natural number.
- Write a Python program that prompts user to enter numbers. The process will repeat until user enters 0. Finally, the program prints sum of the numbers entered by the user.
- Write a Python program to print all the numbers from 1 to 1000 that are not divisible by 2, 3, 5, 7, 11, 13, 17 and 19.
- Write a Python program to find HCF (GCD) of two numbers.
- Write a Python program to check whether a number is Armstrong number or not.
- Write a Python program to swap first and last digits of a number.
- Write a Python program for printing prime numbers up to N. (N>100).
- Write a Python program to construct the following pattern, using a nested for loop.

```

*
*   *
*   *   *
*   *   *   *
*   *   *   *   *
```

```

*      *      *      *
*      *      *
*      *
*

```

23. Write a Python program to print following matrix.

```

1      0      1      0
0      1      0      1
1      0      1      0
0      1      0      1

```

Functions

24. Define a function to find sum of all odd numbers between 1 to n.
25. Define a function to check whether a number is palindrome or not.
26. Define a function to calculate the area of a circle using the formula.
27. Define a function to check whether number is perfect or not.
28. Define a function to print multiplication table of any number.
29. Define a function to print table of a number. Using this function display table of numbers from 1 to 10.
30. Define a recursive function to find power of a number.
31. Define a recursive function count number of digits in a number.
32. Write a recursive function to find a find $1^5 + 2^5 + \dots + n^5$.
33. Write a python program to find the factorial value of a number using recursion.
34. Write a python program to implement Tower of Hanoi using recursive function.
35. Write function for finding factors (n) and use factors function to check whether given number n is prime or not.
36. Write a python program for printing Fibonacci series
 - a. Write recursive approach implementation
 - b. Write iterative implementation

Files

37. Write a Python program to copy the content of one file to other file.
38. Write a Python program to number of words in the above txt file.
39. Write a Python program to number of characters without space in the above txt file.
40. Write a program that reads data from a file and print the no of vowels and constants in the file.
41. Write a python program that accept file Name as input from the user. Open the file and count the number of times a character appears in the file.

List, Tuples and Dictionary

42. Write a Python program to create a list of each digit is a element in a list from a number.
Example: Input: 5467, Output: [5,4,6,7]
43. Write a Python program to form a number from a given list of digits Example: Input: [5, 4, 6, 7], Output: 5467
44. Write a Python program to find the second smallest number and second largest in a list.
45. Write a python program to create dictionary of index is the key and corresponding prime number as value up to 100. Output: {1:2, 2:3, 3:5, 4:7, 5:11, 6:13, 7:17, 8:19 and soon }
46. Write a Python program to find the smallest value and largest value in a dictionary.
47. Example: Input: D1={1:200,2:3000,3:100,5:20} output: 20, 3000.
48. Write a Python script to generate and print a dictionary that contains a number (between 1 and n) in the form (x, x*x).

Sample Dictionary (n = 5) :

Expected Output : {1: 1, 2: 4, 3: 9, 4: 16, 5: 25}

49. Write a Python program to convert a list of characters into a string. Example: Input: ['s','t','r','i','n','g'], Output: string.
50. Write a Python program to combine two dictionary adding values for common keys.
d1 = {'a': 10, 'b': 20, 'c':30}
d2 = {'a': 30, 'b': 20, 'd':40}
Sample output: {'a': 40, 'b': 40, 'd': 40, 'c': 30}
51. Write a program to print index at which a particular value exists. If the value exists a multiple location in the list, then print all the indices. Also, count the number of times the value is repeated in the list.
52. Write a program to remove all duplicate elements in a list.
53. Write a program to create a list of numbers in the range 1 to 10. Then delete all the odd numbers from the list and print the final list.

Strings

54. Write a program that counts up the number of vowels contained in the string S. Valid vowels are: 'a', 'e', 'i', 'o', and 'u'. For example, if s = 'azcbobobegghakl', your program should print: number of vowels 5
55. Assume s is a string of lower-case characters. Write a program that prints the number of times the string 'bob' occurs in s. For example, if s = 'azcbobobegghakl', then your program should print Number of times bob occurs is 2.
56. Write a Python program that finds whether a given character is present in a string or not. In case if it is present then it prints the index at which it is present. Do not use built-in find functions to search the character.
57. Write a Python program that counts the occurrence of a character in a string. Do not use built-in function.
58. Write a python program for following:
 - a. Take a input string with spaces, split it into list of words
 - b. From the list of words, create dictionary with keys (only unique words) and values (length of the word)
59. Write a python program to count number of vowels, spaces and to find longest word in a given input string. (Take input string with spaces)
60. Write a python program to reverse a string. Do not use inbuilt function.

Searching and Sorting

61. Write a Python program for binary search algorithm.
62. Write a Python program for linear search algorithm.
63. Write a Python program to display the elements in an ascending order using bubble sort algorithm.
64. Write a Python program to display the elements in a descending order using selection sort algorithm.

Object Oriented Programming

65. Write a Python program to create a student class (id, Name, mid1_marks, mid2_marks, quiz_marks). Create a student objects and write a function marksList() to display student's result as given below:
ROLL NUMBER:
NAME:

MID1:

MID2:

QUIZ:

TOTAL: MID1+MID2+QUIZ

RESULT: A GRADE (IF TOTAL \geq 80), B GRADE (TOTAL $<$ 80 and TOTAL \geq 60), C GRADE (TOTAL \geq 50 and TOTAL $<$ 60)

(Assume that maximum marks for mid_term1 and mid2_marks is 25 each , and quiz_marks is 50).

66. Write a Python program to create a EMP class (id, Name, sal), create employee objects and write a function PaySlip(empobj) to display particular employee Pay Slip as given below:

EMP ID:

EMP NAME:

EMP BASIC: It is equal to sal.

EMP HRA:

EMP DA:

EMP TAX:

EMP GROSS SAL: BASIC (sal) +HRA (18% of sal) +DA (10% of sal)

EMP NET SAL: GROSS SAL-10% of GROSS SAL

67. Write a Python program to define rectangle class with field's length and breadth. Define color rectangle class which is inherited from rectangle class with additional field color. Create N color rectangle objects and print which color rectangle is having minimum area.
68. Write a Python program to define CAR class (model, speed, price) and Firing CAR class which inherits from CAR with additional field number of bullets and fire method ().
69. Write a Program in python using object-oriented concept to create a base class called Polygon and there are three derived classes Named as triangle, rectangle and square.
70. The base class consists of the input function for accepting sides length
71. The derived classes must have output function for displaying area of triangle, rectangle and square.

SEMESTER-IV

SEMESTER-IV

Course Code	Course Name	Course Category	Credits			
			L	T	P	C
ISES 202	Industry Specific Employability Skills-IV	SEC	3	0	0	1

UNIT I: QUANTS

Logarithms. Permutations and combinations. Probability. Progressions, Geometry and Mensuration, Geometry and Mensuration

UNIT II: REASONING

Statement and conclusions, Most logical choice, Inferred meaning, Data arrangements, Venn diagram, Flow charts and logical gates, Puzzles, Case lets, Ordering, Ranking, Grouping.

UNIT III: VERBAL

Classification of sentences, Logical sequence of words, Verbal reasoning Analyzing arguments, Verification of truth, Matching definitions, Theme detection, Idioms and phrases Antonyms Synonyms

UNIT IV: COMMUNICATION SKILLS

Conditionals, Tense Forms, Verb Forms.

UNIT V: VERBAL ABILITY

Extempore, JAM, Active listening, Email Etiquette, Self-image and self-presentation, FAQ's, Resume

CSE 233	Industry Standard Coding Practice - III	SEC	0	0	4	2

UNIT-I

Introduction to Python, Basic syntax, variables and data types, operators, Input and Output, conditional statements and loops, Problem solving on accessing strings, string operations, string slices, functions and methods, Introduction to lists, accessing list, working on Lists, Matrix data, Practice Problems.

UNIT-II

Introduction to tuple, accessing tuples, tuple operations, introduction to dictionaries, accessing values in dictionaries, properties and functions, importing modules, math module, random module, packages and composition, Problem solving through user defined functions and methods, implementing exception handling, except clause, try? finally clause, user defined exceptions, Advanced data types, examples, Practice problems.

UNIT-III

Problem Solving through Class and Instance Attributes - Properties vs. getters and setters - Implementing a Property Decorator, Descriptors, Inheritance, Multiple Inheritance, Multiple Inheritance Example, Magic Methods and Operator Overloading, Callable and Callable Instances, Inheritance, Python Class for Polynomial Functions.

Problem solving using STL Components: Algorithms - Containers: vector, list, dequeue, arrays, forward_list, - Container Adaptors: Queue, Priority_queue, Stack – Associative Containers: Set, Multiset, map, Multimap – Function Objects – Iterators.

Version control systems, Adding new files to the repository, Staging the environment, Commit, Examples, Practice problems.

UNIT-IV

Industry Standards of leveraging DBMS concepts: Implementing stored procedures, implementing functions, implementing triggers, implementing transactions, case studies, Question and answers.

UNIT-V

Industry Standards of leveraging DBMS concepts: Understanding Managed code, creating managed database objects, HTTP Endpoints and Implementation, case studies, Question and answers.

SEMESTER-IV

Course Code	Course Name	Course Category	Credits			
			L	T	P	C
CSE 208	Web Technology	CC	3	0	0	3

UNIT-I

Basics of Internet-Introduction to world wide web -Web servers-Browsers-Introduction to HTML5-Basic tags in HTML5 for text styling-Tags for handling images, videos and audio on a Web page-Client-side graphics with Canvas- Tables and hyperlinks in HTML5-Formers in HTML5-Introduction to cascading style sheets (CSS)-Web page designing using various CSS features-Background, padding, effects, animations

UNIT-II

Basics of client-side scripting-Introduction to JavaScript-Primitives, operations and expressions in JavaScript-Control statements, object creation and modification-Arrays, functions, Constructors in JavaScript-Pattern matching using Regular expressions in JavaScript

UNIT-III

Introduction to JavaScript libraries jQuery, ReactJS-Introduction to ReactJS-Basics in ReactJS - Internal component states-ES6 object Initializer-Interaction with forms and events-Lifecycle methods in ReactJS-Fetching data from API-Error Handling in ReactJS-Advanced React Components

UNIT-IV

Introduction to Server-side scripting-Overview of PHP-Features of PHP-Primitives, operations and expressions-Control statements and arrays in PHP-Functions and pattern matching in PHP-Form handling-Cookies, sessions, filters in PHP-Object oriented programming using PHP-Overview of other popular server-side scripting languages-Introduction to MySQL and features of MySQL-Connect MySQL with PHP-Querying a MySQL database with PHP-Variious operations on MySQL database using a structured query language (SQL) and PHP

UNIT-V

Introduction to NoSQL-Features of MongoDB and creation/handling of MongoDB databases-Web hosting services- Introduction to Node.js-Python-ASP.NET-JSP- Spring MVC Architecture-Backend Development Using Springboot Framework-ORM & Hibernate-REST APIs-Introduction to serverless web application development.

TEXTBOOKS

1. Learning PHP, MySQL & JavaScript: A Step-by-Step Guide to Creating Dynamic Websites (6th edition, Year-2021) by Robin Nixon, Publisher: O'Reilly Publication.
2. The Road to React by Robin Wieruch, Publisher: Zaccheus Entertainment
3. Web Development with MongoDB and Node by Bruno Joseph D'mello, Mithun Satheesh, Jason Krol, Publisher: Packt Publishing Limited; 3rd edition

REFERENCES

1. Programming World Wide Web (8th Edition, Year-2020) by Robert W. Sebesta, Pearson Publishers

SEMESTER-IV

Course Code	Course Name	Course Category	Credits			
			L	T	P	C
CSE 208L	Web Technology Lab	CC	3	0	0	3

LIST OF PRACTICAL EXPERIMENTS

Experiment No.	Experiment Name
1	<p>Familiarize all the basic HTML tags for</p> <ul style="list-style-type: none"> ● Heading styles ● Ordered and unordered lists ● Image ● Tables ● Forms ● Hyperlinks
2	<p>Practice CSS for web page development</p> <ul style="list-style-type: none"> ● The CSS element Selector ● CSS backgrounds and borders ● CSS fonts ● CSS effects, etc.
3	<p>Implement a website by using all the possible basic HTML and CSS tags with text formatting, tables, forms, images, hyperlinks, etc. [For example, each student can develop his/her own personal website]</p>
4	<p>Practice JavaScript coding:</p> <ul style="list-style-type: none"> ● Find the sum of all elements/numbers of a given array ● Reverse a given string ● Generate the first N prime numbers. ● Create an html page to change the background color for every click of a button using Java script. ● Read the age of a person through a textbox and display his age group (Child/Teenage/Young/Senior citizen) ● Create simple calculator with HTML and JavaScript with functions. Read the inputs through text boxes and keep four different buttons to perform the operations such as add, div, sub, mul, etc. ● Develop a webpage with HTML and Java Script to read name and marks of five subjects obtained for that particular student using forms. Further, it should compute the Grade and output the user.
5	<p>Implement the following using HTML, CSS and JavaScript</p> <ul style="list-style-type: none"> ● Create a registration form (Name, Age, Email ID, PIN code, Password, etc.) using HTML, CSS and perform the client validation of the details using JavaScript. The constraints on the user inputs are given below: <ul style="list-style-type: none"> ○ Name should contain alphabets or spaces. No any other characters allowed. ○ Age should be an inger between 18 and 60. ○ The email id should be valid.

	<ul style="list-style-type: none"> ○ The PIN code should contain 6 digits (spaces or any other characters are not allowed) ○ Password should have a minimum length of 8 characters, at least one lower case letter and one upper case letter must be there. In addition, at least one special character and one digit must be present.
6	Create an interactive web user interface using ReactJS (Example: A simple version of Social media application, messaging application, E-commerce application)
7	Practice server-side programming <ul style="list-style-type: none"> ● Write a PHP function that checks whether a string is all lowercase or not. ● Write a PHP script that checks whether a given string <i>S1</i> present another string <i>S2</i>. ● Write a PHP script to remove nonnumeric characters from the given string (Retain digits, comma and dot) ● Write a PHP script to remove all characters from a string except a-z A-Z 0-9 or " " ● Calculate the difference between two dates using object oriented concept in PHP ● Create Calculator class in PHP with required data and functions such a way that it will accept two values as arguments, then add them, subtract them, multiply them together, or divide them on request.
8	Practice SQL commands in MySQL like create table, update records, delete records, retrieve data from a given table, retrieve some specific data, aggregate functions, etc.
9	Connect MySQL with PHP. Create a simple webpage to store and retrieve details from a database. Example: A web application to handle billing process at super market.
10	Work on a full stack project using HTML, CSS, JavaScript, ReactJS, PHP with Database (MySQL/MongoDB)

Recommended Resources

1. Learning PHP, MySQL & JavaScript: A Step-by-Step Guide to Creating Dynamic Websites (6th edition, Year-2021) by Robin Nixon, Publisher: O'Reilly Publication
2. The Road to React by Robin Wieruch, Publisher: Zaccheus Entertainment
3. Programming World Wide Web (8th Edition, Year-2020) by Robert W. Sebesta, Pearson Publishers

SEMESTER-IV

Course Code	Course Name	Course Category	Credits			
			L	T	P	C
CSE 204	Computer Organization and Architecture	CC	3	0	0	3

UNIT I

Overview: Functional units of a computer, CPU, ALU, CU, Memory, and I/O. History of evolution of computers, Parallel computer architecture: SISD, SIMD, MISD, MIMD. Amdahl's Law. 8086 microprocessor bus structures. Instruction set architecture (ISA), Instruction formats, addressing modes. Assembly language programming for 8086 microprocessors. Binary Number system, 2's complement numbers, Fixed point and IEEE 754 Floating-point numbers and arithmetic.

UNIT II

Instruction cycle state diagram of fetch, decode, execute, interrupt operations. Execution of a complete instruction, Hardwired control design, Micro programmed control design, Nano programming, RISC vs. CISC computers, Performance evaluation of a computer, CPI, Execution time, MIPS, SPEC ratio, numerical examples.

UNIT III

Basic concepts of Pipeline Processing, performance of pipeline process (Execution Time, Efficiency, Throughput, Latency), Instruction pipeline, Arithmetic pipeline, pipeline stalls, data dependency, pipeline hazards, data hazards, control hazards and structural hazards. Techniques for handling hazards: Forwarding, bypassing, Compiler's technique of code reordering. Pipeline for MIPS computer examples.

UNIT IV

Semiconductor memory, SRAM, DRAM, ROM, speed, size, and cost comparison. Address space. Cache memory, Primary memory to cache memory mapping techniques, Direct Mapping, Fully Associative Mapping, and Set Associative mapping. Hit rate, miss rate, average memory access time (AMAT). Cache overhead. Virtual memory concepts, page table, Page Replacement Algorithms (FIFO, LRU, Optimal), TLB cache. Associative Memory, Secondary storage – magnetic disk, disk structure, Seek Time, Access Time, Rotational Time, Transfer Time, Transfer Rate.

UNIT V

I/ O devices and processor interaction, Standard I/O Interfaces. Interrupts: programmed interrupts, hardware interrupts. Data transfer between CPU and the I/O devices (Programmed I/O, Interrupt Initiated I/O, Direct Memory Access)

Recommended Resources

Text Books

1. Computer Organization and Architecture – Designing for Performance”, William Stallings, Ninth edition, Pearson publications.
2. David A. Patterson and John L. Hennessy, “Computer Organization and Design: The Hardware/Software interface
3. Computer Organization, Carl Hamacher, Zvonko Vranesic and Safwat Zaky, V Edition, McGraw-Hill publications

Reference Books

1. Computer System Architecture, Morris Mano, Third edition, Pearson publications.
2. Andrew S. Tanenbaum, “Structured Computer Organization”,
3. David A. Patterson and John L. Hennessy, “Computer Organization and Design: The Hardware/Software interface”
4. John P. Hayes, “Computer Architecture and Organization”, Third Edition, Tata McGraw Hill.
5. An Introduction to 8086/8088 Assembly Language Programming, Thomas P. Skinner, John Wiley & Sons, 198

SEMESTER-IV

Course Code	Course Name	Course Category	Credits			
			L	T	P	C
CSE 204 L	Computer Organization and Architecture Lab	CC	0	0	2	1

LIST OF PRACTICAL EXPERIMENTS

1. Write Assembly language program to print the numbers from 0 to 9.
2. Write Assembly language programs to find average of numbers stored in an array.
3. Write Assembly language programs to find the largest number in an array.
4. Write Assembly language programs to sort the numbers in ascending order.
5. Write Assembly language programs to find L.C.M of two numbers.
6. Write Assembly language programs to find G.C.D of two numbers.
7. Write Assembly language programs to display nth term Fibonacci number.
8. Write Assembly language programs to find the factorial of a number.
9. Programs for 16-bit Arithmetic Operations for 8086 (Using Microprocessor trainer kit 8086).
10. Program for String Manipulations for 8086 (Using Microprocessor trainer kit 8086).
11. Develop an assembler to convert the given assembly language program into machine language program by considering 8086/88 microprocessor.
12. Develop a simulator for 8086/88 microprocessor.

SEMESTER-IV

Course Code	Course Name	Course Category	Credits			
			L	T	P	C
CSE 207	Java Programming	C	3	0	0	3

UNIT I: INTRODUCTION TO JAVA

An Overview of Java - Data types, Variables and Arrays, operators, expressions, Control statements, Classes, Objects, Constructor, Methods, this reference, static keyword, and final keyword; String handling, Compiling using command line argument; Inheritance - Concept, Member access, Abstract Class, Interface, Creating Multilevel hierarchy- super uses, Packages-access specifiers, using final with inheritance; Polymorphism - Compile time Polymorphism, Method overloading, Constructor overloading; Run time polymorphism, Method overriding, Dynamic method dispatch.

UNIT II: EXCEPTION HANDLING & MULTITHREADING

Fundamentals of exception handling, Uncaught exceptions, using try and catch, multiple catch blocks, Exception types - Introduction to Object class, Exception class hierarchy, Termination or presumptive models, Built-in exceptions, User defined exceptions, Nested try statements, Throw, Throws, and Finally. Multithreading- Differences between thread-based multitasking and process-based multitasking, Java thread model, Thread life cycle, Creating threads – Thread class, Runnable interface, Thread priorities, Synchronizing threads, Inter-thread communication.

UNIT III: STREAM BASED I/O (JAVA.IO)

Java API, The Stream Classes-Byte streams and Character streams, reading console Input and Writing Console Output, File class, Reading and writing Files, Random access file operations, The Console class, Serialization, Enumerations, auto boxing, generics.

UNIT IV: THE COLLECTIONS FRAMEWORK (JAVA.UTIL) & JDBC

Collection's overview, Collection Interfaces, The Collection classes- Array List, Linked List, Hash Set, Tree Set, Priority Queue, Array Deque, and other utility classes. Accessing a Collection via an Iterator, using an Iterator, The For-Each alternative, Map Interfaces and Classes, Comparators, Collection algorithms, String Tokenizer. JDBC – What is database, Table, SQL Syntax-Create, Insert, Select, Drop, Alter, Update, Delete, what is JDBC, JDBC Architecture and Components, JDBC Driver Types, Connections, Statements, Result Set.

UNIT V: GUI PROGRAMMING WITH SWING

Introduction - AWT & Swings, MVC architecture, components, containers. Understanding Layout Managers, Flow Layout, Border Layout, Grid Layout, Card Layout, Grid Bag Layout. Event Handling- The Delegation event model- Events, Event sources, Event Listeners, Event classes, Handling mouse and keyboard events, Adapter classes, Inner classes, Anonymous Inner classes. A Simple Swing Application, Applets – Applets and HTML, Security Issues, Applets and Applications, passing parameters to applets. Creating a Swing Applet, painting in Swing, A Paint example, Exploring Swing Controls- J Label and Image Icon, J Text Field, The Swing Buttons- J Button, J Toggle Button, J Check Box, J Radio Button, J Tabbed Pane, J Scroll Pane, J List, J Combo Box, Swing Menus, Dialogs.

TEXTBOOKS

1. Java The complete reference, 11th edition, Herbert Schildt, McGraw Hill Education (India) Pvt. Ltd.

REFERENCES

1. Understanding Object-Oriented Programming with Java, updated edition, T. Budd, Pearson Education.
2. An Introduction to programming and OO design using Java, J. Nino and F.A. Hosch, John Wiley & sons.
3. Introduction to Java programming, Y. Daniel Liang, Pearson Education.
4. Object Oriented Programming through Java, P. Radha Krishna, and Universities Press.
5. Programming in Java, S. Malhotra, S. Chaudhary, 2nd edition, Oxford Univ. Press.
6. Java Programming and Object-Oriented Application Development, R. A. Johnson, Cengage Learning.

SEMESTER-IV

Course Code	Course Name	Course Category	Credits			
			L	T	P	C
CSE 207 L	Java Programming Lab	CC	0	0	2	1

LIST OF PRACTICAL EXPERIMENTS

1. Declare a class Named Teacher. The class will have all the data members as per your convenient. The class will have constructors. Write a function to read the values of the class variables. The values of the variable will be stored in a FILE (text file). The values will be stored in a structured format of your own choice.

Further, read the content of the FILE and display the content in an ordered form (First Name, Last Name).

Concept Learning:

1. FILE manipulation
 2. Use try catch blocks
 3. Use multiple try catch block
 4. Finally statement
- Try to have your own Exception

2. Create three classes Named Student, Teacher, Parents. Student and Teacher class inherits Thread class and Parent class implements Runnable interface. These three classes have run methods with statements. The task of the teacher class of the first assignment has to be synchronized. Similarly, the other two classes should have run methods with few valid statements under synchronized.

3. Create two classes Named Student and Teacher with required data members. Assume that the information about the Student and Teacher is stored in a text file. Read n and m number of Student and Teacher information from the File. Store the information in Array list of type Student and Teacher Array List<Student> and Array List<Teacher>. Print the information of Teacher who taught OOPS and Maths. Use Iterator and other functions of util in your program.

4. Watch any of the favorite movie of your choice (any language is fine, preferably English). Create a Text file to store at least 10 meaningful dialogs from the movie and store it in a text file. Process the file to remove the stop words (eg. the, is, was,) and create another file to have clean text (word).

5. Write a java program to create Hashtable to act as a dictionary for the word collection. The dictionary meaning of the words, including synonyms, etc., has to be displayed.

6. Declare two classes Student and Teacher. The classes will have the data members and constructors as per your convenience. Write a JAVA program, (i) where the Teacher will enter the marks of the all the students in the database. (ii) Once the marks are entered, the student can view the marks.

7. Create GUI for the above program to upload the dialog FILE, clean the FILE. The GUI should take input from the user for invoking the dictionary for displaying dictionary meaning.

8. Declare a class Named Teacher. The class will have all the data members as per your convenient. The class will have constructors. Develop a GUI to read the values of the class variables from the keyboard. Use text field to read the values. Use button to store it in a file one by one. The values will be stored in a structured format of your own choice.

Have an option in the GUI to search the Name of the students by roll number and display the content in the text field.

9. Create two classes Named Student and Teacher with required data members. Read the information about the student and teacher using text fields. Use checkbox to choose the option to feed either teacher information or student information. Store the information about the Student and Teacher in a text file. Read n and m number of Student and Teacher information from the File. Show in the GUI about a Teacher who taught two subjects to a section. Develop at least one of the applications (AWT problem) using swing package.

10. Create a Window based applications using various controls to handle subject registration for exams. Have a List Box to display the subject of semesters. Have one more List box having subject codes. Have a combo box to select the Semester, which will change the list of course and code in the list boxes. Display the subject registered for the examination on the right side of the window.

11. Declare a class Named Teacher. The class will have all the data members as per your convenient. The class will have constructors. Develop a GUI to read the values of the class variables from the keyboard. Use text field to read the values. Use button to store it in a file one by one. The values will be stored in a structured format of your own choice.

Have an option in the GUI to search the Name of the students by roll number and display the content in the text field. Develop at least one of the applications (AWT problem) using swing package.

12. Create a Window based application for displaying your photo album. Create a Frame and Canvas. Change the border, foreground and background colors of canvas and other controls. Have buttons to start the image show, pause the image show and end the image show. Explore the options to play background music.

13. Create a Window application with menu bar and menu. The frame will also have a text area with scroll bar. In the menu, have File related options. Open a file and its content has to be displayed in the text area.

14. Create a GUI using various controls: (i) to upload the marks of all the students presented in a marks.csv or marks.txt file into the database. (ii) to show the marks of the respective student after uploading the marks into the database. Note: Handle the exception, if the file is not present (or) if the marks are not uploaded in the database.

15. Individual Project. Every student should do a project to achieve all the course outcomes. Based on the course outcomes, the project will be evaluated.

SEMESTER-IV

Course Code	Course Name	Course Category	Credits			
			L	T	P	C
CSE 201	Design and Analysis of Algorithms	CC	3	0	0	3

UNIT I: INTRODUCTION

Algorithmic thinking & motivation with examples, Reinforcing the concepts of Data Structures with examples. Growth of Functions, Asymptotic notation, Standard notations and common functions: big O, omega, and theta notation, Analysis of Sorting and Searching Algorithms, Recursive and non-recursive algorithms.

UNIT II: SORTING ALGORITHMS

Divide and conquer: The maximum-subarray problem, Strassen's algorithm for matrix multiplication, The substitution method for solving recurrences, The recursion-tree method for solving recurrences, The master method for solving recurrences. Analysis of Merge sort, Analysis of Quicksort, Heapsort: Heaps, Maintaining the heap property, building a heap, The heapsort algorithm. Bucket Sort, Comparison of sorting algorithms.

UNIT III: DYNAMIC PROGRAMMING & GREEDY ALGORITHMS

Greedy method: An activity-selection problem, Elements of the greedy strategy, Huffman codes, Fractional Knapsack, Task-scheduling problem.

Dynamic Programming: Rod cutting, Matrix-chain multiplication, Elements of dynamic programming, 0/1 Knapsack, Coin Change Problem.

UNIT IV: GRAPH ALGORITHMS

Graph Traversal: Applications of BFS: distance, connectivity and connected components and cycles in undirected graphs. Applications of DFS: Topological sort, cycles in directed graphs, Biconnected Components and Strong Connectivity. Path algorithms: shortest path algorithms (along with analysis) SSSP: Bellman Ford. APSP: Floyd Warshall's, Maximum Flow: The Ford-Fulkerson method.

UNIT V: GENERAL PROBLEM-SOLVING TECHNIQUES

Backtracking: N-Queen's problem, Knight's tour,

Branch-and-bound: 15-puzzle problem, Travelling Salesman Problem (TSP),

Pattern matching algorithms: Brute-force, Boyer Moore, KMP algorithms.

NP-Completeness: Polynomial time, NP-completeness and reducibility, NP-completeness proof, 3-CNF satisfiability, NP-complete problems.

TEXTBOOKS

1. Cormen, Leiserson, Rivest, Stein, "Introduction to Algorithms", 3rd Edition, MIT press, 2009.
2. Parag Dave & Himanshu Dave, "Design and Analysis of Algorithms", Pearson Education, 2008.

REFERENCES

1. Michel Goodrich, Roberto Tamassia, "Algorithm design-foundation, analysis & internet examples", Wiley., 2006.
2. A V Aho, J E Hopcroft, J D Ullman, "Design and Analysis of Algorithms", Addison-Wesley Publishing.
3. Algorithm Design, by J. Kleinberg and E. Tardos, Addison-Wesley, 2005.
4. Algorithms, by S. Dasgupta, C. Papadimitriou, and U. Vazirani, McGraw-Hill, 2006.

SEMESTER-IV

Course Code	Course Name	Course Category	Credits			
			L	T	P	C
CSE 201 L	Design and Analysis of Algorithms Lab	CC	0	0	2	1

LIST OF PRACTICAL EXPERIMENTS

1. Programs for summation of series $1+X+X^2+X^3+\dots$ with different time complexities.
2. Implementation of Bucket Sort with time complexity analysis
3. Converting recursive programs to non-recursive programs. Towers of Hanoi Problem example.
4. Divide and conquer:
Implementation of
 - a. maximum-subarray problem
 - b. Strassen's algorithm for matrix multiplication
5. Greedy Approach
 - a. Implementation of Fractional Knapsack
 - b. Implementation of Task-scheduling problem
 - c. Implementation of Huffman Code.
6. Dynamic Programming: Implement 0/1 Knapsack problem
7. Graph traversals:
Implementation of
 - a. Find connected components and cycles in undirected graphs.
 - b. Topological sort
 - c. Cycles in directed graphs
 - d. Biconnected Components
 - e. Bellman Ford
 - f. Ford-Fulkerson method.
8. Branch and Bound:
 - a. Implementation of 8 Queens problem
 - b. Implementation of 15-puzzle problem.
9. Pattern matching:
 - a. Implementation of Boyer Moore algorithm
 - b. Implementation of KMP algorithm
10. Implementation of Approximation algorithms: TSP

SEMESTER-V

SEMESTER-V

Course Code	Course Name	Course Category	Credits			
			L	T	P	C
ISES 301	Industry Specific Employability Skills-V	SEC	3	0	0	1

UNIT I: QUANTS

Advanced Algebra, Advanced P & C and Probability, Advanced Time, Speed and Distance, Advanced Time and Work, Advanced Geometry and Mensuration.

UNIT II: COMMUNICATION SKILLS

Group discussion, Tell about yourself, Extempore, Mock interview, Video interview & Presentations

UNIT III: REASONING

Puzzle and Reasoning

TEXTBOOKS/REFERENCES

1. Mitchell S. Green – 2017, Know Thyself: The Value and Limits of Self-Knowledge.
2. Debbie Hindle, Marta Vaciago Smith - 2013 , Personality Development: A Psychoanalytic Perspective.
3. Lani Arredondo - 2000, Communicating Effectively.
4. Patsy McCarthy, Caroline Hatcher - 2002, Presentation Skills: The Essential Guide for Students.
5. Martha Davis, Elizabeth Robbins Eshelman, Matthew McKay - 2008, Time Management and Goal Setting: The Relaxation and Stress.
6. Arun Sharma – How to prepare for Quantitative Aptitude, Tata Mcgraw Hill.
7. RsAgarwal, A Modern Approach to Verbal and Non Verbal Reasoning, S.Chand Publications.
8. Verbal Ability and Reading comprehension-Sharma and Upadhyay.
9. Charles Harrington Elstor, Verbal Advantage: Ten Easy Steps to a Powerful Vocabulary, Large Print, September 2000.
10. GRE Word List 3861 – GRE Words for High Verbal Score, 2016 Edition.
11. The Official Guide to the GRE-General Revised Test, 2nd Edition, Mc Graw Hill Publication
12. English grammar and composition – S.C. Gupta.
13. R.S. Agarwal – Reasoning.
14. Reasoning for competitive exams – Agarwal.

SEMESTER-V

Course Code	Course Name	Course Category	Credits			
			L	T	P	C
IRH 301	Internationalization for Career Advancement - I	SEC	1	0	0	1

UNIT 1: Importance of Internationalization, Factors to be considered choosing a country to study abroad, When & what kind of preparation a student needs to study abroad, Benefits of Studying Abroad. Opportunities – Internationalization in Entrepreneurial Perspective.

UNIT 2: Higher Studies – National and International, Important competitive exams to crack How to crack, Vocabulary, Math and Analytical Skills.

VOCABULARY: Word Building Based on Prefixes, Suffixes, Mnemonics, Group of words, Synonyms, And Antonyms.
Verb, Nouns and tenses

UNIT 3: Logic-Based Reading Comprehension

UNIT 4: : Vocabulary And Basic Grammar

Unit 5: Importance of Global Immersion Programs

Why is it important? How it helps students to develop their adaptability arena to international arena. Student Exchange and Semester Abroad Programs, About International Internships - What are the International Internships & why is it imp? How to avail international Internships

SEMESTER-V

Course Code	Course Name	Course Category	Credits			
			L	T	P	C
ENTR300	Dream & Discover	SEC	1	1	1	1

Summary: ENTR300 is for the serious seekers who want to bring a change in the way the society is functioning or facing a challenge.

A structured 'Design Thinking' approach is applied to the identified problems where can be from any walk of life – either from the corporate, research institutes, the government, the industries and the society at large.

The solutions are taken for industry validation, and the feedback is taken till the point the optimum solution is designed. Mentoring is provided at each step of advancement.

The first version of solution which can be social in nature or technological or combining both.

UNIT I: Concept Ideation & Design Thinking

How an idea can impact the world, validating the idea with mentors and real time industry exposure. Need Analysis and working with secondary data.

UNIT II: Market Validation

Market validation of the idea, customer survey and modifying the idea with the feedback received, and refining the base concept.

UNIT III: Segmentation of the potential users/ customers

Understanding niche customer segment to be targeted and developing the solution as per the understanding of all the previous feedback and data.

UNIT IV: Industry Validation

Reaching the real customers and validating the product or the idea designed. Industry validation and mentoring.

UNIT IV: Solution Design

Designing a prototype of the product or the service which can actually work in the market scenario. In short it is like a 'major project' but with actual data, application and ready to pay customers.

TEXTBOOKS/REFERENCES

1. NA

SEMESTER-V

Course Code	Course Name	Course Category	Credits			
			L	T	P	C
CSE 332	Industry Standard Coding Practice -IV	SEC	0	0	4	2

UNIT-I

Greedy Strategy, Problem solving on greedy problems: Fractional Selection of inputs, fractional Knapsack, Sequencing problem solutions, Activity selection, Huffman Decoding, Scenario based problem solving implementing Greedy Methods, Examples, Practice problems.

UNIT-II

Problem solving implementing Dynamic programming, Coding solutions to form Sub structures, Problem solving on Dynamic Knapsack, Trip optimization problem, Finding the sub set sum, Scenario based problem solving using Dynamic Programming approaches, Coding solutions on Coin-change sub structure, Problem solving using Grid Memo, Problem solving on Longest Common Sub string, Longest Common subsequence, Minimum Edit Distance problems, Examples, Practice problems.

UNIT-III

Introduction to Graphs Problems, Types of graphs, Problem solving on graph traversals, Checking the degree sequence, DFS, BFS, Scenario based problem solving implementing graphs, Introduction to Graph Coloring, Introduction to DAG, Graph Check, DFS Spanning Tree, Strongly Connected point, Graph Reduction, Topological Sorting Examples, Practice problems.

UNIT-IV

Introduction to Backtracking, Differences between backtracking and brute force methods, State space diagram, N Queens problem, Finding the path & Grid based problems, iterative/loop free approaches, Graph coloring, examples Finding a way, Solving Grid based backtracking problems, Problem Solving with String Matching Patterns, KMP Algorithm, Trie data structure, Examples, Practice problems.

UNIT-V

Problem solving Methods and techniques: Complete, precise and consistent specification of the problem abstract, verification and analysis of the algorithm, Actions on the GitHub, Security standards of the access, creating branches, Branching and merging, Examples, Practice problems.

SEMESTER-V

Course Code	Course Name	Course Category	Credits			
			L	T	P	C
CSE 304	Database Management System	CC	3	0	0	3

UNIT I: INTRODUCTION TO DBMS AND RELATIONAL MODEL

File Processing System, Advantages of DBMS over File Processing System, Database System Applications DBMS Architecture: The three-schema architecture, Data Independence: Logical and Physical Data Models: Hierarchical, network and relation models, Introduction to relational model, concepts of domain, attribute, tuple, relation, importance of null values. Database constraints (Domain, Key constraints, integrity constraints) and their importance.

UNIT II: QUERY PROCESSING

Relational Algebra, Relational Calculus, Introduction to SQL: Database Objects- DDL Schema definitions. DML- Insert, select, update, delete. Views, exercise on SQL queries. Transaction support in SQL: Aggregate Functions, Null Values, Views, Complex Integrity Constraints in SQL, Assertions, Triggers.

UNIT III: CONCEPTUAL MODEL AND DATABASE DESIGN

Entity Relationship model Entity types, Entity Sets, Attributes, and Keys Relationships, Relationship types and constraints, Weak Entity types. Enhanced ER (EER) Modeling: Super/Sub Classes Specialization and Generalization. Constraints and characteristics of Specialization and Generalization. Example EER Schema. Basics of Normalization, Normal Forms: First Normal Form (1NF), Second Normal Form (2NF), Third Normal Form (3NF), BCNF, 4NF.

UNITIV: TRANSACTION PROCESSING, CONCURRENCY CONTROL AND RECOVERY

Introduction of transaction processing, advantages, and disadvantages of transaction processing system, Serializability and Recoverability of transaction, Concurrency Control, Lock based Protocols, Timestamp Based Protocols – Validation based Protocols - Multiple Granularity Locking, Recovery techniques.

UNIT V: OVERVIEW OF STORAGE AND INDEXING

Data on External Storage, File Organization, and Indexing - Clustered Indexes, Primary and Secondary Indexes.

Indexed Sequential Access Methods (ISAM) B+ Trees: Tree Structure, Search, Insert, Delete. Hash Based Indexing: Static Hashing, Extendable hashing, Linear Hashing, Extendable vs. Linear Hashing.

4. C.J. Date. 2003. An Introduction to Database Systems (8 ed.). Addison-Wesley Longman Publishing Co., Inc., Boston, MA, USA.

SEMESTER-V

Course Code	Course Name	Course Category	Credits			
			L	T	P	C
CSE 304 L	Database Management System Lab	CC	0	0	2	1

LIST OF PRACTICAL EXPERIMENTS

Exercise-I

Create a data file to store records of the students (fields: rollno, Name, branch,age). (ii) Sort the records of the file based on the rollno of the students. (iii) Perform external sorting procedure (based on the roll number) on two data files which store records of the students and store the result in to the third data file.

Exercise-II

Store student records (fields: rollno,Name,branch,age) in a data file and perform linear search in the data file by reading *rollno* as input and then display the student details and display the time required to do this operation.

Exercise-III

Store student records (fields: rollno,Name,branch,age) in a data file and build an index file by considering the *rollno* as the key.

- i.Perform linear search in the index file by reading *rollno* as input and then display the student details by reading from the data file and display the time required to do this operation.
- ii.Perform binary search in the index file (by sorting the index file based on the *rollno*) by reading *rollno* as input and then display the student details by reading from the data file and display the time required to do this operation.

Exercise-IV

Store student records (fields: rollno,Name,branch,age) in a data file and build an index file by using binary search tree (*rollno* is used as the key).

- i.Perform search in the index file by reading *rollno* as input and then display the student details by reading from the data file and display the time required to do this operation.
- ii.Add and delete the student records from the data file and then perform corresponding modifications in the index file.

Exercise-V

Store student records (fields: rollno,Name,branch,age) in a data file and build an index file by using hash table (*rollno* is used as the key here).

- iii. Perform search in the index file by reading *rollno* as input and then display the student details by reading from the data file and display the time required to do this operation.
- i. Add and delete the student records from the data file and then perform corresponding modifications in the index file.

Exercise-VI

Consider the following relations.

Suppliers (sid: integer, sName: string, address: string)

Parts (pid: integer, pName: string, color: string)

Catalog (sid: integer, pid: integer, cost: real)

The key fields are underlined, and the domain of each field is listed after the field Name.

Therefore, sid is the key for Suppliers, pid is the key for Parts, and sid and pid together form the key for Catalog. The Catalog relation lists the prices charged for parts supplied by Suppliers.

Write SQL statements for the following.

- a. Find the Names of suppliers who supply some **red color** part.
- b. Find the sids of suppliers who supply some **red color** part and having office located at 'Chennai'
- c. Find the average cost of **red color** parts supplied by various suppliers.
- d. Find the Names of the supplier who is supplying most number of parts.
- e. Find the sids of suppliers who supply every part.
- f. Find the sids of suppliers who supply every red color part.
- g. List the number of suppliers for each color of part.
- h. Find the supplier who supplies the **red color** part at a cheaper rate.
- i. For each color part, display the details of the suppliers who supply that part at a cheaper rate.
- j. Display the Names of the suppliers along with the number of parts supplied by them.
- k. Find the details of the supplier who supplies the costliest part.
- l. Display the Names of the suppliers who are selling at least two parts.

Exercise-VII

A) Consider the COMPANY database schema shown in the figure.

EMPLOYEE

Fname	Minit	Lname	<u>Ssn</u>	Bdate	Address	Sex	Salary	Super_ssn	Dno
-------	-------	-------	------------	-------	---------	-----	--------	-----------	-----

DEPARTMENT

Dname	<u>Dnumber</u>	Mgr_ssn	Mgr_start_date
-------	----------------	---------	----------------

DEPT_LOCATIONS

<u>Dnumber</u>	<u>Dlocation</u>
----------------	------------------

PROJECT

Pname	<u>Pnumber</u>	Plocation	Dnum
-------	----------------	-----------	------

WORKS_ON

<u>Essn</u>	<u>Pno</u>	Hours
-------------	------------	-------

DEPENDENT

<u>Essn</u>	<u>Dependent_name</u>	Sex	Bdate	Relationship
-------------	-----------------------	-----	-------	--------------

Figure 5.5
Schema diagram for
the COMPANY
relational database
schema.

- i. Create a view that has department Name, manager Name and manager salary for every department.

- ii. Create a view that has project Name, controlling depart Name, number of employees, and total hours worked per week on the project for each project with more than one employee working on it.
- iii. Create an updateable view for the relation DEPARTMENT

B) Create a materialized view for finding average salary of employees, average salary of managers, average salary for each department and department(s) which spend more money on salary for the employees.

C) Assume that Dno of EMPLOYEE relation has got NOT NULL constraint. Write a transaction which inserts tuples in to the relations EMPLOYEE and DEPARTMENT without affecting integrity constraints specified in the schema.

Exercise-VIII

A) Consider the following relations:

instructor(ID, Name, dept_Name, salary)

section(course_id, sec_id, semester, year, building, room_number, time_slot_id)

teaches(ID, course_id, sec_id, semester, year)

Write assertions for the following:

- i. An instructor cannot teach in two different classrooms in a semester in the same slot
- ii. An instructor cannot teach more than one course for the same semester

B) Consider the following relations.

product(maker, model, type)

pc(model, speed, ram, hd, price)

laptop(model, speed, ram, hd, screen , price)

printer(model, color, type, price)

Write triggers for the following:

- (a) When updating the price of a PC, check that there is no lower priced PC with the same speed.
- (b) When inserting a new printer, check that the model number exists in product.
- (c) When making any modification to the Laptop relation, check that the average price of laptops for each manufacturer is at least Rs 1500.

C) Consider the following relations.

Emp (eno, eName, eage, salary, departno, supereno), dep(depno, depName, depage, eno),

depart(departno, departName, location)

Write stored procedures

- i. to find the average salary of employees who have got more than two dependents
- ii. to find the Names of employees (age is greater than 50) and their dependents (average age is less than 10).

Exercise-IX

Write java programs (using JDBC)

- a. to create the following relations emp (eno, eName, eage, salary, departno, supereno), dep(depno, depName, depage, eno), depart(departno, departName, location) and insert at least 20 tuples for each relation.
- b. (i) to find average age of employee's department wise (ii) to list department(s) (location wise) which pay less salary to the employees.

Exercise-X

Store student records (fields: rollno, Name, branch, age) in a data file and build an index file by using B+ tree (rollno is used as the key here).

- a. Perform search in the index file by reading roll no as input and then display the student details by reading from the data file and display the time required to do this operation.
- b. Add and delete the student records from the data file and then perform corresponding modifications in the index file

SEMESTER-V

Course Code	Course Name	Course Category	Credits			
			L	T	P	C
CSE 303	Computer Networks	CC	3	0	0	3

UNIT I: OVERVIEW OF THE INTERNET (PHYSICAL LAYER AND DATA LINK LAYER)

Basic Computer Network concepts, Protocol, Layering Scenario. Layer Architecture: OSI Model, TCP/IP model. Internet history standards and administration; Comparison of the OSI and TCP/IP reference model. Guided transmission media, wireless transmission media. Different LAN topologies: BUS, RING and STAR topology. Data Link layer design issues: Error detection techniques. Error Correction Techniques, Flow control. Sliding Window protocols. Go back N and selective Repeat protocols. Difference between single bit sliding window and n-bit sliding window protocols.

UNIT II: MEDIUM ACCESS CONTROL

Static and Dynamic channel Allocations. Shared channel Access: Pure ALOHA and slotted ALOHA. Persistent CSMA protocols: 1, P and Non-persistent CSMA protocols. CSMA with collision detection. Comparison of different CSMA protocols. Collision free protocols: Bit-map protocol, Token Ring and Binary Count down protocols. Limited Contention protocols: Adaptive tree walk protocol. Shared medium for wireless networks: CSMA/CA or MACA. Interconnecting LANs: HUBS, Repeaters and Switches and bridges. Spanning tree algorithm for bridges.

UNIT III: NETWORK LAYER

Overview: Connection oriented and connection less services. Comparison of packet switched, and circuit switched networks. Routing: proactive routing and reactive routing protocols, static and dynamic routing protocols. Dijkstra Algorithm, Distance vector routing and Link state routing protocols. Routing in wireless networks: AODV and DSR routing protocols. Overview of IP header and IP addressing. Classful IP addressing: Class A, B, C, D and E. Limitations of classful Addressing, Introduction to Subnet. Overview of Congestion: Warning Bit, Choke packets, Load Shedding, RED (Random Early Detection).

UNIT IV: INTERNETWORKING AND TRANSPORT LAYER

IP Encapsulation and Tunneling. IP packet fragmentation, ICMP, ARP. ICMP, DHCP, Introduction to Transport layer. Different end-to-end transport layer protocols: TCP and UDP. Brief explanation of TCP protocol. Packet formats for TCP and UDP protocol.

UNIT V: TRANSPORT AND APPLICATION PROTOCOLS

TCP Connection Management Modeling. TCP Sliding Window. TCP congestion control. Introduction to application layer paradigms. Client Server model. Introduction and overview of HTTP protocol. Overview of FTP protocol. Operation of Electronic Mail. Introduction to peer-to-peer communication models. Introduction and overview of TELNET. Importance of Security in computer Networks.

TEXTBOOKS

1. Computer Networks - Andrew S Tanenbaum, 4th Edition, Pearson Education.
2. Data Communications and Networking - Behrouz A. Forouzan, Fifth Edition TMH, 2013.

REFERENCES

1. Computer Networking: A Top-Down Approach Featuring the Internet, James F. Kurose, K. W. Ross, 3rd Edition, Pearson Education.

SEMESTER-V

Course Code	Course Name	Course Category	Credits			
			L	T	P	C
CSE 303 L	Computer Networks Lab	C	0	0	2	1

LIST OF PRACTICAL EXPERIMENTS

1.	Explain about wire shark and display how to send packets or packets from one layer to another.
2.	Write a Java program to implement Error Detection Technique using CRC Algorithm.
3.	Write a Java program to implement Error Correction Technique using Hamming code.
4.	Write a Java program to implement TCP Client Server programming.
5.	Write a Java program to implement UDP Client Server Programming.
6.	Write a Java program to implement 1-bit Stop and Wait Protocol at data link layer.
7.	Write a Java program to implement N-bit Sliding Window Protocol at data link layer.
8.	Write a Java program to implement Dijkstra Shortest path routing protocol.
9.	Write a Java program to implement Distance Vector Routing.
10.	Write a Java program to implement echo command in client server socket programming.
11.	Write a Java program to implement Trace-route command.
12.	Write a Java program to implement Ping command.
13.	Write a Java program to display the class of IP address, network mask and generate the subnet IP address based on the subnet bits entered from the keyboard.
14.	Write a Java program to implement sliding window protocol at the transport layer.
15.	Write a Java program to transfer file using TCP?

SEMESTER-V

Course Code	Course Name	Course Category	Credits			
			L	T	P	C
CSE 301	Operating Systems	CC	3	0	0	3

UNIT I: OPERATING SYSTEMS OVERVIEW

Operating system overview-objectives and functions, Evolution of Operating System- Computer System Organization- Operating System Structure and Operations- System Calls, System Programs, OS Generation and System Boot.

UNIT II: PROCESS SCHEDULING

Processes-Process Concept, Process Scheduling, Operations on Processes, Inter process Communication; CPU Scheduling algorithms; OS – examples.

UNIT III: PROCESS SYNCHRONIZATION AND DEADLOCKS

Threads- Overview, Multithreading Models; Process Synchronization – Critical Section Problem, Mutex Locks, Semaphores, Monitors; Deadlocks- OS examples.

UNIT IV: STORAGE MANAGEMENT

Main Memory-Contiguous Memory Allocation, Segmentation, Paging, Virtual Memory-Demand Paging, Page Replacement, Allocation, Thrashing; OS examples.

UNIT V: STORAGE MANAGEMENT

I/O SYSTEMS: Mass Storage Structure- Overview, Disk Scheduling and Management; File System Storage-File Concepts, Directory and Disk Structure, Sharing and Protection; File System Implementation- File System Structure, Directory Structure, Allocation Methods, Free Space Management- OS examples.

			L	T	P	C
CSE 301 L	Operating Systems Lab	CC	0	0	2	1

LIST OF PRACTICAL EXPERIMENTS

Shell Programs

1. Write a script to find the greatest of three numbers (numbers passed as command line parameters).
2. Write a script to check whether the given no. is even/odd.
3. Write a script to calculate the average of n numbers.
4. Write a script to check whether the given number is prime or not.
5. Write a script to check whether the given input is a number or a string.
6. Write a script to compute no. of characters and words in each line of given file.
7. Write a script to print the Fibonacci series up to n terms.
8. Write a script to calculate the factorial of a given number.
9. Write a script to calculate the sum of digits of the given number.
10. Write a script to check whether the given string is a palindrome.
11. Write a shell script that accepts a string from the terminal and echo a suitable message if it doesn't have at least 5 characters including the other symbols.
12. Write a shell script to echo the string length of the given string as argument.
13. Write a shell script that accepts two directory Names as arguments and deletes those files in the first directory which are similarly Named in the second directly. Note: Contents should also match inside the files.
14. Write a shell script to display the processes running on the system for every 30 seconds, but only for 3 times.
15. Write a shell script that displays the last modification time of any file.
16. Write a shell script to check the spellings of any text document given as an argument.
17. Write a shell script to encrypt any text file.
18. Combine the above commands in a shell script so that you have a small program for extracting a wordlist.
19. Write a shell script which reads the contents in a text file and removes all the blank spaces in them and redirects the output to a file.
20. Write a shell script that changes the Name of the files passed as arguments to lowercase.
21. Write a shell script to translate all the characters to lower case in a given text file.
22. Write a shell script to combine any three text files into a single file (append them in the order as they appear in the arguments) and display the word count.
23. Write a shell script that, given a file Name as the argument will write the even numbered line to a file with Name evenfile and odd numbered lines to a file called oddfile.
24. Write a shell script which deletes all the even numbered lines in a text file.
25. Write a script called hello which outputs the following: • your userName • the time and date • who is logged on • also output a line of asterices (*****) after each section.
26. Write a script that will count the number of files in each of your subdirectories.
27. Write a shell script like a more command. It asks the user Name, the Name of the file on command prompt and displays only the 15 lines of the file at a time on the screen. Further, next 15 lines will be displayed only when the user presses the enter key / any other key.
28. Write a shell script that counts English language articles (a, an, the) in a given text file.
29. Write the shell script which will replace each occurrence of character c with the characters chr in a string s. It should also display the number of replacements.

30. Write a shell program to concatenate two strings given as input and display the resultant string along with its string length. Write a shell program to simulate a simple calculator.
- 90) Write a shell program to count the following in a text file. • Number of vowels in a given text file. • Number of blank spaces. • Number of characters. • Number of symbols. • Number of lines

CPU scheduling algorithms

- First Come First Serve
- Shortest Job First
- Priority
- Round Robin

Semaphore and Deadlock

- Write a C program to implement the Producer & consumer Problem using Semaphore.
- Write a C program to simulate Bankers algorithm for the purpose of deadlock avoidance.

Page Replacement Algorithms

- First In First Out
- Least Recently Used
- Optimal
- Least Frequently Used
- Second Chance

SEMESTER V

Course Code	Course Name	Course Category	Credits			
			L	T	P	C
CSE 340	UROP	RDIP	0	0	6	3

Department of Computer Science and Engineering, UROP Guidelines

1. Tentative date of commencement of Research Project is along with 6th semester each year.
2. The duration of the Project is 12 weeks or end by the 6th semester.
3. Maximum of 5 students form a team
4. Each faculty co-ordinates maximum 5 teams
5. The title of the research work, scope, methodology and expected outcomes need to be approved by the Faculty mentor/guide.
6. Grading has to be completed by the concerned faculty by the end of 6th semester.
7. Number of Credits for CSE340 is 3.

General Guidelines for UROP project report and Research work.

These guidelines explain briefly the mechanics of writing a research paper in Computer Science and Engineering. These guidelines are generic and can be customized to fit most of the research works

The writing can start with the abstract, which can be approximately one page 10–20 sentences. The abstract will be refined and updated as a continuous process. The abstract can concisely (1) identify the research topic, (2) identify the benefits and advantages that result (3) and if there is novelty, describe the novelty of the presented work.

Section 1: Introduction (Motivation)

Although the title of the starting section is “Introduction” it should really be Motivation. In one or two paragraphs, the topic has to be introduced. This is followed with useful of the work, including possible applications of the work. Possible points to mention include:

1. Does the research work describe the state-of-the-art in that research domain?
2. What is the relevance of this work in filling any research gap?
3. Who will potentially benefit from the work?
4. Does the presented work provide a new technique of some sort?
5. Does this research work provide any new insight in some way?
6. Is it a review work which gives an insight to the current research in a particular domain?

Words like, contribute, benefit, advantageous, and possibly novel are used in this list. The presented work often builds on a previous system or algorithm. If so, your work may inherit benefits from the previous work. Those inherited advantages may also be listed. The introduction section then concludes with how the rest of the research paper is organized.

Section 2: Related Works: Presents review of the previous work on this topic.

The related work section demonstrates to the reader that you have done your homework (research), reviewed the previous literature, and now are ready to present your contribution based what has been previously published. The review is confined to relevant and recent research works in the domain of the proposed research. One of the difficult aspects of the related work section is

choosing the proper scope. There is some subjectivity in choosing which books or papers to refer to and also importantly, which previous literature not to refer to. This is something an advisor is able to help with.

Section 3: Presents the proposed work/experimental/simulation specifications.

Section 4: Presents any algorithms or procedures used.

Next section: Can represent an evaluation of the results and the

Last section: May present conclusions and future work.

Citations

Any figure, image, or equation that is taken from another source must be cited. Content and terminology from other sources must also be cited. For more information about citations and their use, see:

<http://www.plagiarism.org/>. Click on the “How to cite sources” link.

References should be accurate and complete, i.e., with page numbers etc. A paper without complete and correct references can leave a bad impression on the reader and detract from a paper’s credibility.

Mark Distribution: (As per the Original Plan. May be reviewed)

- | | |
|--|----------|
| 1. Internal evaluation by Guide: | 50 marks |
| 2. External evaluation by a Committee:
(Project Report, Demonstration and Presentation) | 50 marks |

SEMESTER-VI

Course Code	Course Name	Course Category	Credits			
			L	T	P	C
ENTR301	Disrupt & Innovate	SEC	1	1	1	1

Summary: ENTR301 is the extension of ENTR300.

This course is open for only serious students who have the vision of translating/ converting their prototypes/ solutions in a patent/ business model and solutions which can be used or can be implemented by the society.

Here at this stage the student is equipped with the knowledge of a business and financial plan, the market mapping, investor pitch and ultimately designing the final prototype.

At this stage a seed funding of Rs.5,00,000 is also provided in case a student is willing to take the project forward and want to devote more time. Technical and non-technical facilities and support is provided, along with academic credits, special permissions and a buffer placement cushion 24 months, post-graduation.

UNIT I: Business Model and Technology

Putting the missing pieces of the puzzle, designing a business model after market and industry validation.

UNIT II: Revenue Model

What is value of your idea or concept? Why someone will pay for it and what are the unique points that can make your idea outstanding.

UNIT III: Operational Model and Resource Requirement

Resources and team required to make the prototype into a real business. Need analysis with real time data and real industry application.

UNIT IV: Financial Statement, Business Plan and Pitching

The pre-launch preparation, drawing the financial implications, need and requirements to start from the scratch. What are the fundings available in the market along with the complete support system.

UNIT IV: Seed Funding Pitch and Beyond

Pitching in front of the panel for seed fund, participating in national and international contests.

SEMESTER-VI

Course Code	Course Name	Course Category	Credits			
			L	T	P	C
CSE 307	Automata and Compiler Design	CC	3	0	0	3

UNIT – 1

Introduction to Formal Languages, Chomsky Hierarchy, Structure of Compiler, Finite Automata – DFA, Design of NFA, Conversion of NFA to DFA, Regular expression, Conversion of regular expression to NFA, Minimization of DFA, Applications of Finite Automata to lexical analysis, Applications of Finite Automata to lexical analysis.

UNIT – 2

Context free grammars, Design of Context free grammars, Design of Context free grammars, Applications of CFG to parsing, Left Recursion, Left Factorization, Recursive Descent parsing, Computation of FIRST, Computation of FIRST, LL(1) parsing.

UNIT – 3

Bottom-up parsing: Handle pruning, Shift reduce parsing, LR parsing algorithm, Construction of LR(0) items, SLR table construction, Construction of LR(1) items, CLR, LALR, Introduction to YACC.

UNIT – 4

Semantic Analysis: Syntax directed translation, S-attributed and L-attributed grammars, S-attributed and L-attributed grammars, S-attributed and L-attributed grammars, overloading of functions and operations., Intermediate code generation, Intermediate code generation, Three address code for control flow statements, Run time storage management.

UNIT – 5

Code Optimization, Principal sources of optimization , optimization of basic blocks., Construction of flow graphs, Common sub expression elimination, Copy propagation, dead code elimination, constant folding, operator strength reduction, Data flow analysis of flow graphs, Code generation, A simple code generation algorithm, A simple code generation algorithm.

SEMESTER-VI

Course Code	Course Name	Course Category	Credits			
			L	T	P	C
CSE 307 L	Automata and Compiler Design Lab	CC	0	0	2	1

1. Language recognizer
2. Conversion of NFA to DFA
3. Explore Regular expression libraries in various programming languages and use them in some case studies
4. Implementation of Lexical analyzer using C
5. Symbol table implementation
6. Introduction to LEX tool
7. Implementation of lexical analyzer using LEX
8. Recursive Descent Parser
9. Predictive Parser
10. LALR Parser (YACC/Bison tool)
11. Intermediate code generation
12. Code optimization
13. Code Generation

SEMESTER-VII

SEMESTER-VII

Course Code	Course Name	Course Category	Credits			
			L	T	P	C
HVE 100	Human Values and Ethics	FC	2	0	0	2

UNIT-I: Course Introduction - Need, Basic Guidelines, Content and Process for Value Education

Understanding the need, basic guidelines, content and process for Value Education, Self-Exploration—what is it? - its content and process; ‘Natural Acceptance’ and Experiential Validation- as the mechanism for self-exploration. Continuous Happiness and Prosperity- A look at basic Human Aspirations. Right understanding, Relationship and Physical Facilities- the basic requirements for fulfillment of aspirations of every human being with their correct priority. Understanding Happiness and Prosperity correctly- A critical appraisal of the current scenario. Method to fulfill the above human aspirations: understanding and living in harmony at various levels

UNIT-II: Understanding Harmony in the Human Being - Harmony in Myself

Understanding human being as a co-existence of the sentient ‘I’ and the material ‘Body’. Understanding the needs of Self (‘I’) and ‘Body’ - Sukh and Suvidha. Understanding the Body as an instrument of ‘I’ (I being the doer, seer and enjoyer). Understanding the characteristics and activities of ‘I’ and harmony in ‘I’. Understanding the harmony of I with the Body: Sanyam and Swasthya; correct appraisal of Physical needs, meaning of Prosperity in detail. Programs to ensure Sanyam and Swasthya.

UNIT-III: Understanding Harmony in the Family and Society- Harmony in Human-Human Relationship

Understanding harmony in the Family- the basic unit of human interaction. Understanding values in human-human relationship; meaning of Nyaya and program for its fulfillment to ensure Ubhay-tripti; Trust (Vishwas) and Respect (Samman) as the foundational values of relationship. Understanding the harmony in the society (society being an extension of family): Samadhan, Samridhi, Abhay, Sah-astitva as comprehensive Human Goals. Visualizing a universal harmonious order in society- Undivided Society (AkhandSamaj), Universal Order (SarvabhaumVyawastha)- from family to world family!

UNIT-IV: Understanding Harmony in the Nature and Existence - Whole existence as Co-existence

Understanding the harmony in the Nature. Interconnectedness and mutual fulfillment among the four orders of nature- recyclability and self-regulation in nature. Understanding Existence as Co-existence (Sah-astitva) of mutually interacting units in all-pervasive space. Holistic perception of harmony at all levels of existence.

UNIT-V: Implications of the above Holistic Understanding of Harmony on Professional Ethics

Natural acceptance of human values. Definitiveness of Ethical Human Conduct. Basis for Humanistic Education, Humanistic Constitution and Humanistic Universal Order. Competence in Professional Ethics. Ability to utilize the professional competence for augmenting universal human order, Ability to identify the scope and characteristics of people-friendly and eco-friendly production systems, technologies and management models, Case studies of typical holistic technologies, management models and production systems, Strategy for transition from the

present state to Universal Human Order, At the level of individual: as socially and ecologically responsible engineers, technologists and managers, At the level of society: as mutually enriching institutions and organizations.

SEMESTER-VIII

SEMESTER-VIII

Course Code	Course Name	Course Category	Credits			
			L	T	P	C
CSE 463	Capstone Project	RDIP	0	0	24	12

Capstone Project Guidelines

Introduction

These guidelines are conceived as a set of procedures stating broad expectations from both students and mentors of the Capstone project which is part of the B.Tech CSE curriculum. These guidelines are intended to make the project work evaluation process easier, formal and more authentic. The Capstone project has to be sufficiently complex and feasible so as to be considered for 12 Credits. The evaluation of the project is done by a review panel comprising department faculty members and the review process is continuous. In the first review by the constituted panel, the project may be accepted or rejected or major/minor changes can be suggested.

Project Selection

Capstone project may be an in-campus project or can be mapped with internship carried out in the industry or the research internship carried out in the other premier Universities in India/Abroad.

In campus project: The idea for student's Project may be a proposal from a faculty member or student's own, or perhaps a combination of the two. The project has to be sufficiently complex and feasible. Students are advised to choose a project that involves a combination of sound background research, a solid implementation, or piece of theoretical work, and a thorough evaluation of the Project's output. Interdisciplinary Project proposals and innovative Projects are encouraged and more appreciable.

Mapping with any Internship:

- Any type of internships can be carried out by the students in the 7th and 8th semester after getting the due approval from the Project coordinator and the Head of the department.
- The internship period has to be a minimum of 10 weeks of duration in each semester and the students could have carried out the practical work for at least 180 hrs during this period.
- The internship has to involve some Software/Hardware design and implementation component and/or research component and the complexity of this work is expected to match the requirements of Capstone Project work.

Mentor allocation process: Students can form a batch of 4 (5 may be allowed in exceptional cases on the discretion of the project coordinators) and select their mentor provided the Faculty member accepts them and the faculty member has less than the specified number projects under his/her mentorship.

Project Equipment: In case of deserving projects for limited financing of equipment, the students can approach the concerned university authorities following due procedure.

Meetings with Your Supervisor:

Instructions to students: You must make sure that you arrange regular meetings with your Mentor. The meetings may be brief once your project is under way, but your Mentor needs to know that your work is progressing. You are also expected to be contactable throughout the project. You should inform the Mentor your contact details and keep these updated if these change.

Instructions to Mentors: Mentors are advised to maintain a project dairy depicting attendance of student and progress of project.

Legal and Ethical Considerations: If a student wants to do some project with some company where their relatives or friends work, the details need to be disclosed to their mentor. The mentor has to report the same to the project coordinators for permission. Again, if a student doing internship with a company, the data, procedures/algorithms and software developed may be classified and may not be allowed to submit in the report. The students need to consider that before requesting mapping.

Project Report format: Format of the report is similar to the format of standard Journal papers published. (Abstract-Literature Survey – Methodology – Algorithms – Simulation – Results - explanation of results - Future work etc)

Project milestones and Assessment

Starting date of the project to be taken as the commencement date of the semester as per academic calendar. The students are expected to plan from the beginning for at least one research publication in a reputed journal.

Stage 1: Title, Scope of the project and Literature survey to be submitted within 2 weeks from the commencement of the project. In the first review by the constituted panel, the project may be accepted or rejected or major/minor changes can be suggested.

Stage 2: Methodology, Requirement analysis and Deliverables to be submitted within 4 weeks from the commencement of the project.

Stage 3: Algorithms, project design and implementation plan have to be submitted within 6 weeks of the commencement of the semester. Internal review will be conducted by the Mentor and this review has a weightage of 50%.

Stage 4: Project implementation to be done and demonstrate that the project meets the requirements and expectations.

Stage 5: The results need to be analyzed and if any fine tuning required is to be done.

Final evaluation by expert committee at the end of the semester.
and this evaluation has a weightage of 50%.

SPECIALIZATION STREAMS

SPECIALIZATION STREAMS

Artificial Intelligence and Machine Learning Stream

Course Code	Course Name	Course Category	Credits			
			L	T	P	C
CSE 413	Artificial Intelligence	SE	3	0	0	3

UNIT I: INTRODUCTION

What is Artificial Intelligence, Foundations and History of Artificial Intelligence, Applications of Artificial Intelligence, Intelligent Agents, Structure of Intelligent Agents.

UNIT II: SEARCH

Introduction to Search, Searching for solutions, Uniformed search strategies, Informed search strategies, Local search algorithms and optimistic problems, Adversarial Search, current-best-hypothesis search, least commitment search.

UNIT III: KNOWLEDGE REPRESENTATION AND REASONING

Inference, Propositional Logic, Predicate Logic (first order logic), Logical Reasoning, Forward & Backward Chaining, Resolution; AI languages and tools - Lisp, Prolog, CLIPS.

UNIT IV: PROBLEM SOLVING

Formulating problems, problem types, Solving Problems by Searching, heuristic search techniques, constraint satisfaction problems, stochastic search methods.

UNIT V: LEARNING

Overview of different forms of learning, decision trees, rule-based learning, neural networks, reinforcement learning.

Game playing: Perfect decision game, imperfect decision game, evaluation function, minimax, alpha-beta pruning.

TEXTBOOKS

1. Stuart Russell, Peter Norvig, "Artificial Intelligence – A Modern Approach", Pearson Education, Third Edition, Pearson Education, 2008.

REFERENCES

1. Elaine Rich and Kevin Knight, "Artificial Intelligence", McGraw-Hill, 3rd edition, 2017.
2. E Charniak and D McDermott, "Introduction to Artificial Intelligence", Pearson.

Course Code	Course Name	Course Category	Credits			
			L	T	P	C
CSE 413 L	Artificial Intelligence Lab	SE	0	0	2	1

LIST OF PRACTICAL EXPERIMENTS

1. Week 1: Artificial Intelligence Problem identification and PEAS description.
2. Week 2: Introduction to AI programming Language PROLOG.
3. Week 3: Study of facts, objects, predicates and variables in PROLOG.
4. Week 4: Study of arithmetic operators, simple input/output and compound goals in PROLOG.
5. Week 5: Study of string operations in PROLOG. Implement string operations like substring,
6. string position, palindrome etc.
7. Week 6: Write a prolog program to implement all set operations (Union, intersection,
8. complement etc.
9. Week 7: Write a program for Usage of rules in Prolog.
Create a family tree program to include following rules 1. M is the mother of P *if* she is a parent of P and is female 2. F is the father of P *if* he is a parent of P and is male 3. X is a sibling of Y *if* they both have the same parent. 4. Then add rules for grandparents, uncle-aunt, sister and brother. Based on the facts, define goals to answer questions related to
10. Week 8: Write programs for studying Usage of arithmetic operators in Prolog.
Accept Name of the student, roll no, his/her subject Name, maximum marks and obtained marks in the subject. (Take marks of at least 6 subjects). Compute the percentage of a student. Display his result with other information.
Accept department, designation, Name, age, basic salary, house rent allowance (HRA) of an employee. Compute dearness allowance (DA) which is 15% of basic salary. Determine the gross salary (basic salary+HRA+DA) of the employee. Display all information of the employee (Generate Payslip).
11. Week 9: Implement a program for recursion and list in PROLOG.
12. Week 10: WAP for studying usage of compound object and list in Prolog.
Write a program to maintain inventory items using a compound object:
(i) Accept from user the details of at least 10 objects. (ii) Display from user the details of objects entered by user (2) Find and display odd and even numbers from a given input list.
13. Week 11: Write a prolog program to solve “Water Jug Problem”.
14. Week 12: Write a program to implement a monkey banana problem.
15. Week 13: Write a program to implement 8 Queens Problem.
16. Week 14: Write a program to solve traveling salesman problem.
17. Week 15: Write a program to solve water jug problem using LISP.

Course Code	Course Name	Course Category	Credits			
			L	T	P	C
CSE 336	Machine Learning	SE	3	0	0	3

UNIT I

Introduction: Introduction to Machine Learning: Introduction. Different types of learning, Hypothesis space and inductive bias, Evaluation. Training and test sets, cross validation, Concept of over fitting, under fitting, Bias and Variance

Linear Regression: Introduction, Linear regression, Simple and Multiple Linear regression, Polynomial regression, evaluating regression fit.

UNIT II

Decision tree learning: Introduction, Decision tree representation, appropriate problems for decision tree learning, the basic decision tree algorithm, hypothesis space search in decision tree learning, inductive bias in decision tree learning, issues in decision tree learning, over fitting in decision tree and methods to avoid over fitting.

Instance based Learning: K nearest neighbour, the Curse of Dimensionality, Feature Selection: univariate, multivariate feature selection approach, missing values ratio, high correlation filter, low variance filter, feature selection using decision tree, Feature reduction Techniques: Principal Component Analysis, Linear Discriminate Analysis

Recommender System: Content based system, Collaborative filtering based

UNIT III

Probability and Bayes Learning: Bayesian Learning, Naïve Bayes, Python exercise on Naïve Bayes, Logistic Regression

Support Vector Machine: Introduction, the Dual formulation, Maximum margin with noise, nonlinear SVM and Kernel function, solution to dual problem

UNIT IV

Artificial Neural Networks: Introduction, Biological motivation, ANN representation, appropriate problem for ANN learning, Perceptron, multilayer networks and the back propagation algorithm

UNIT V

Ensembles: Introduction, Bagging and boosting, Random forest, Discussion on some research papers.

Clustering: Introduction, K-mean clustering, agglomerative hierarchical clustering, Python exercise on k-mean clustering.

Course Code	Course Name	Course Category	Credits			
			L	T	P	C
CSE 314	Digital Image Processing	SE	3	0	0	3

UNIT I

Introduction: Digital Image fundamentals: Image sampling and quantization, relationship between pixels, Image acquisition and Pre-processing: Intensity transformations and spatial filtering, some basic intensity transformation functions, Histogram processing, spatial filters for smoothing and sharpening.

UNIT II

Filtering in the Frequency Domain: basic filtering in the frequency domain, image smoothing and sharpening Image Restoration: Image restoration/degradation model, noise models, restoration in the presence of noise only, estimating the degradation function.

UNIT III

Image segmentation: Fundamentals, point, line detection, basic edge detection techniques, Hough transform, Thresholding, basic global thresholding, optimal thresholding using Otsu's method, multi-spectral thresholding, Region based segmentation, region growing, region splitting and merging.

UNIT IV

Color Image Processing: color models, Color transformation Image Compression: Fundamentals, Some basic compression methods Morphological Image Processing: Erosion and Dilation, opening and closing, thinning, skeletonisation.

UNIT V

Image Representation: Shape features (Region-based representation and descriptors), area, Euler's number, eccentricity, elongatedness, rectangularity, direction, compactness, moments, convex hull, texture features, color features. Object and Pattern Recognition: Pattern and pattern classes, Matching, minimum distance or nearest neighbor classifier, matching by correlation, Optimum statistical classifier, Neural network classifier.

CSE 314 L	Digital Image Processing Lab	SE	0	0	2	1

LIST OF PRACTICAL EXPERIMENTS

1. Perform the following operations using library functions
 - a. Read, Display and write any color image in other formats.
 - b. Find RED, GREEN and BLUE plane of the color image.
 - c. Convert color image into gray scale image and binary image.
 - d. Resize the image by one half and one quarter.
 - e. Image rotates by 45, 90 and 180 degrees.
2. Create black and white images (A) of size 1024x1024. Which consists of alternative horizontal lines of black and white? Each line is of size 128.
 Create black and white images (B) of size 1024x1024. Which consists of alternative vertical lines of black and white? Each line is of size 128. Perform the following operations on Image A and Image B.
 - a. Image addition of A and B
 - b. Subtraction of A and B
 - c. Multiplying Images of A and B
 - a. Create a grayscale image of size 256x1024. Intensity of image should vary sinusoidal.
 - b. Create a white image of size 256x256, with black box of size 58x58 at centre.
3. Develop programs for following intensity transformation operation on a gray scale image. Collect any gray scale image from any source. Process that image using these operations.
 - a. Image negative
 - b. Log transformation and inverse log transform: $s = c \log(1+r)$, c is a const, $r \geq 0$. s is pixel intensity of output image, r is the pixel intensity of input image. Study the effect of constant c on the quality of output image.
 - c. Power law transformation: Study the effect of different values of Gamma used in this transformation.
 - d. Contrast stretching
 - e. Gray level slicing
4. Develop programs for following spatial filtering operations on a gray scale image.
 - a. Averaging: Implement averaging filtering operations for different window sizes and study their effect on the quality of output image. Write your observations on output image quality.
 - b. Weighted averaging: Implement weighted averaging filtering operations for different window sizes and study their effect on the quality of output image. Write your observations on output image quality.
 - c. Median filtering: Implement weighted averaging filtering operations for different window sizes and study their effect on the quality of output image. Write your observations on output image quality.
 - d. Max filtering
 - e. Min filtering
5. Take a gray scale image and add salt and pepper noise. Write programs for following operations and observe their outputs
 - a. Linear smoothing or Image averaging
 - b. Weighted averaging

- c. Median filtering. Compare the output quality among Image averaging and median filtering.
 - d. Max filtering
 - e. Min filtering
6. Write programs to perform following sharpening operations on a gray scale image
 - a. Laplacian filter
 - b. Filtering using composite mask
 - c. Unsharp masking
 - d. High boost filtering
 - e. Filtering using first order derivative operators such as sobel and prewitt mask.
7. Write a program to improve contrast of an image using histogram equalization. The prototype of the function is as below:

```
histogram_equalisation(input_Image, no_of_bins);
```

 The function should return the enhanced image. Consider two low contrast input images. Study the nature of the output image quality in each case by varying the number of bins.
8. Take a low contrast gray scale image (A) and a high contrast gray scale image (B). Write a program to improve the contrast of A with the help of image B using histogram specification or matching. The prototype of the function is as below:

```
Histogram_sp(input_Image, specified_Iage, no_of_bins);
```

 The function should return the enhanced image.
9. Develop programs to implement frequency domain smoothing filters (Ideal, Butterworth and Gaussian) and apply these filters on a gray scale image.
 - a. Compare/comment on the output of Ideal, Butterworth and Gaussian Low pass Filters having the same radii (cutoff frequency) value.
 - b. Consider a suitable gray scale image and demonstrate the ringing effect on the output of Ideal low pass frequency domain filter.
 - c. Compare the output of Butterworth low pass filters (order $n=2$) for different cut-off frequencies (5, 15, 30, 90, 120).
 - d. Compare the output of Gaussian low pass filters for different cut-off frequencies (5, 15, 30, 90, and 120).
10. Develop programs to implement frequency domain sharpening/High pass filters (Ideal, Butterworth and Gaussian) and apply these filters on a gray scale image.
 - a. Compare/comment on the output of Ideal, Butterworth and Gaussian High pass Filters having the same radii (cutoff frequency) value.
 - b. Consider a suitable gray scale image and demonstrate the ringing effect on the output of Ideal high pass frequency domain filter.
 - c. Compare the output of Butterworth high pass filters (order $n=2$) for different cut-off frequencies (5, 15, 30, 90, 120).
 - d. Compare the output of Gaussian high pass filters for different cut-off frequencies (5, 15, 30, 90, and 120).
11. Develop program to add different types of noise in a gray scale image and write functions to implement following filters for image restoration in presence of these noises.
 - a. Remove Salt and Pepper Noise
 - b. Minimize Gaussian noise
 - c. Median filter and Weiner filter
12. Write and execute program for image morphological operations erosion and dilation.
13. Implement Morphological smoothing using opening and closing
14. Develop program to implement point and line detection masks. Detect points and lines using these masks for a given gray scale image.
15. Develop programs for edge detection using different edge detection mask.

16. Develop programs to achieve image segmentation using
17. Basic Global thresholding
18. Optimal global thresholding or Otsu's thresholding
19. Given a set of coordinates as boundary pixels in an image. Write a program to implement Hough Transform for joining the points using different lines.
20. Given a MXN image. Write a program to find the Co-occurrence matrix for a given angle and distance. Compute the Co-occurrence matrix features.
21. Given a MXN image. Write a program to find the Local Binary Pattern profile of the given image.

1. Write a program take text file as an input and print word, character count and ascii value of each characters as output. (Hint: Use open(), read() and split()).
2. Write a encryption program: Input: computerscienceengineeringrsmuniversity Output: gsqtxivwgmirgiirkmriivmrkwvqyrmzivwmxc Hint: key =4 (play with ascii value).
3. Raju send an encrypted message (cipher text) “PHHW PH DIWHU WKH WRJD SDUWB” to Rani. Can you build decryption process and find out what is the message (plain text) send to Rani? Hint: try all keys.
4. Raju send encrypted message “ZICVTWQNGKZEIIGASXSTSLVWLA” to Rani. Can you build decryption process and find out what is the message send to Rani. Hint: try all keys for each character.
5. Kohli have plain text “wewishtoreplaceplayer”. Can you build encryption process and find out what is the cipher text he needs send to BCCI. Help him out by using monoalphabetic cipher. Hint: use any one-to-one mapping between alphabets.

One to one

mapping

A	B	C	D	E	F	G	H	I	J	K	L	M	N	O	P	Q	R	S	T	U	V	W	X	Y	Z
A	N	D	R	E	W	I	C	K	S	O	H	T	B	F	G	J	L	M	P	Q	U	V	X	Y	Z

6. Kohli sent encrypted message (Cipher text) “SEEMSEAOMEDSAMHL” to Anushka. Can you build decryption process and find out what is the message (plain text) send to Anushka. Hint: use above one to one mapping between alphabets.
7. Raju want to build encrypted and decryption algorithms of Playfair Cipher. Help him to build a key matrix using the key “srmapuniversity”
8. By using key matrix Raju want to send message “we are discovered save yourself” to Rani. Can you build encryption process and find out what is the cipher text message send to Rani by using palyfaircipher.

s	r	m	a	p
u	n	i/j	v	e
t	y	b	c	d
f	g	h	k	l
o	q	w	x	z

9. By using key “CBDE” Raju would like send message (plain text)“HELLO WORLD” to Rani. Can you build encryption process and find out what is the encrypted message (cipher text) to Raju by using Hill Cipher.Also Can you build decryption process and find out what is the decrypted message (plain text) of cipher text "SLHZYATGZT" by using Hill Cipher.
10. Implementation of Encryption and Decryption of Vigenère Cipher
keyword *deceptive*
key: deceptivedeceptivedeceptive
plaintext: wearediscoveredsaveyourself
ciphertext: ZICVTWQNGRZGVTVWAVZHCQYGLMGJ
11. Implement the Encryption and Decryption of Row Transposition.

Key: 4 3 1 2 5 6 7

Plaintext: a t t a c k p

o s t p o n e
d u n t i l t
w o a m x y z

Ciphertext: TTNAAPTMTSUOAODWCOIXKNLYPETZ

12. Implement the Euclidean Algorithm for integers and polynomials.
13. Implement AES Key Expansion.
14. Implementation of AES encryption and decryption
15. Implementation of Simplified DES Encryption and decryption
16. Implementation of RC4
17. Implementation of RSA algorithm
18. Implementation of Diffie-Helman key exchanges
19. Implementation of elliptic-curve cryptography
20. Implementation of Hash functions

Course Code	Course Name	Course Category	Credits			
			L	T	P	C
CSES 315	Network Security	SE	3	0	0	3

UNIT I: NEED FOR SECURITY

Need for Security: Security Attack, Security Services, Information Security, Methods of Protection.

Network Concepts: Basic Concepts of Computer Networks

Threats in Networks: Threat Precursors, Threats in Transit, Protocol Flaws, Message Confidentiality Threats, Nonexistent and Well-Known Authentication, Spoofing, DoS, DDoS

Network Security Controls: Segmentation, Redundancy, Single Points of Failure, Encryption, Link and End-to-End Encryption, Virtual Private Networks, VPN & Firewall, PKI and Certificates, SSL and SSH Encryption, Kerberos, Onion Routing

UNIT II: AUTHENTICATION

Message Authentication Codes (MAC): Message Authentication Requirements, Message Authentication Functions, Security of MACs, MACs Based on Hash Functions: HMAC.

Digital Signature: Digital Signatures, Elgamal Digital Signature Scheme, Schnorr Digital Signature Scheme, NIST Digital Signature Algorithm, Elliptic Curve Digital Signature Algorithm, RSA-PSS Digital Signature Algorithm.

Overview of Authentication Systems: Password-Based Authentication, Address-Based Authentication, Cryptographic Authentication Protocols, Trusted Intermediaries, KDCs, Certification Authorities (CAs), Session Key Establishment.

Security Handshake Pitfalls: Login, Mutual Authentication, Integrity/Encryption for Data, Two-Way Public Key Based Authentication, One-Way Public Key Based Authentication, Mediated Authentication (with KDC), Needham-Schroeder, Expanded Needham-Schroeder, Otway-Rees, Nonce Types.

Strong Password Protocols: Lamport's Hash, Strong Password Protocols, Strong Password Credentials Download Protocols.

UNIT III: IPSEC

IPSec: Overview of IP Security (IPSec), IP Security Architecture, Modes of Operation, Security Associations (SA), Authentication Header (AH), Encapsulating Security Payload (ESP), Comparison of Encodings.

Internet Key Exchange (IKE): Photuris, SKIP, History of IKE, IKE Phases, Phase 1 IKE - Aggressive Mode and Main Mode, Phase 2/Quick Mode, Traffic Selectors, The IKE Phase 1 Protocols, Phase-2 IKE: Setting up IPsec SAs, ISAKMP/IKE Encoding - Fixed Header, Payload Portion of ISAKMP Messages, SA Payload, SA Payload Fields.

UNIT IV: WEB SECURITY

Web Security Requirements: Web Security threats, Web traffic Security Approaches.

SSL/TLS: Secure Socket Layer (SSL), Transport Layer Security (TLS), TLS Architecture, TLS record protocol, change cipher spec protocol, Alert Protocol, Handshake Protocol, Https, SSH.

Secure Electronic Transaction (SET): SET functionalities, Dual Signature, Roles & Operations, Purchase Request Generation, Purchase Request Validation, Payment Authorization and Payment Capture.

SNMP: Basic concepts of SNMP, SNMP basic components and their functionalities, Basic commands of SNMP, SNMPv1 Community facility and SNMPv3. Intruders, Viruses and related threats.

UNIT V: FIREWALL & EMAIL SECURITY

Firewalls: Need for Firewalls, Firewall Characteristics, Types of Firewalls, Firewall Basing, Firewall Location and Configurations.

Electronic Mail Security: Pretty Good Privacy, S/MIME, DNSSEC, Domain Keys Identified Mail.

TEXTBOOKS

1. Perlman, Radia, Charlie Kaufman, and Mike Speciner. Network security: private communication in a public world. Pearson Education India, 2016.
2. Cryptography and Network Security – Principles and Practice: William Stallings, Pearson Education, 6th Edition.

REFERENCES

1. Network Security and Cryptography, Bernard Menezes, CENGAGE Learning.
2. Introduction to Network Security: Neal Krawetz, CENGAGE Learning.
3. Cryptography and Network Security: Atul Kahate, Mc Graw Hill, 3rd Edition.

Course Code	Course Name	Course Category	Credits			
			L	T	P	C
CSES 315 L	Network Security Lab	SE	0	0	2	1

LIST OF PRACTICAL EXPERIMENTS

1. packet assembler/analyzer: Wireshark.
2. packet assembler/analyzer: hPing3.
3. Encrypted communication over socket using AES.
4. Message Authentication Code: MAC.
5. MAC Based on Hash Function: HMAC.
6. Session Key establishment using RSA.
7. Handcraft a TCP handshake.
8. Diffie-Hellman Algorithm.
9. DH Key exchange.
10. Network Mapper: Nmap Basics.
11. Penetration Testing: Metasploit Basics.
12. Key tool & OpenSSL.
13. One Way SSL to a Web App.
14. SNMP: net SNMP – MIB.
15. Firewall with UFW.

Course Code	Course Name	Course Category	Credits			
			L	T	P	C
CSE 410	Mobile and Wireless Security	SE	3	0	0	3

UNIT I: INTRODUCTION TO MOBILE AND WIRELESS NETWORKS

IEEE wireless networks, WLAN: IEEE 802.11 (a:n), WPAN: IEEE 802.15 (Bluetooth & Zigbee), WMAN: IEEE 802.16 (WiMAX), WMAN mobile: IEEE 802.20 (MBWA), IEEE 802.21 framework (MIH), Cellular Networks, Cellular networks: VoIP, IMS, 4G Security

UNIT II: HOW EXISTING WIRELESS NETWORKS ARE SECURED

Attacks on wireless networks, WEP, WEP Shortcomings, IEEE 802.11i, Bluetooth, Authentication in wireless networks, GSM Authentication, UTMS Authentication, SS7 Protocol Stack

UNIT III: NEXT GENERATION WIRELESS NETWORKS

Mobility & Internet, Mobility with MIPv6, Mobility with Mobile IPv4, IP mobility with HIP and NetLMM, Ad Hoc Networks: Protocols, Security in Ad Hoc Networks, Key Management in Ad Hoc Networks, Wireless Sensor Network Security, Key Management in WSN

UNIT IV: PREVENTING MALICIOUS BEHAVIOR

Naming and Addressing, Establishing Security Association: Key Establishment in Sensor Network,

Establishing Security Association: Utilizing Mobility, Wormhole Attack, Privacy in RFID System, Location Privacy in Vehicular Network, Privacy Preserving Routing in Ad-hoc Networks

UNIT V: MOBILE APPLICATION SECURITY

Brief Introduction to Android – I, Brief Introduction to Android – II, Android Security Model Permission, Package Management, User Management, Cryptographic Providers, Network Security and PKI, Credential Storage, Discovering Vulnerabilities using Static Analysis, Tools Fuzzing on Android.

TEXTBOOKS

1. Nouredine Boudriga, Security of Mobile Communications, 2010.
2. Levente Buttyán and Jean-Pierre Hubaux, Security and Cooperation in Wireless Networks, 2008. [Available Online]

REFERENCES

1. James Kempf, Wireless Internet Security: Architectures and Protocols, 2008.

Course Code	Course Name	Course Category	Credits			
			L	T	P	C
CSE 410 L	Mobile and Wireless Security Lab	SE	0	0	2	1

LIST OF PRACTICAL EXPERIMENTS

1. Understanding IEEE 802.11 with Wireshark.
2. Medium Access Control for Wirelessly Connected Stations.
3. Wireless Security – I (Wireless Security Basics).
4. Wireless Security – II (Wireless Threats).
5. Bluetooth Security.
6. Wireless Security Pen Testing (WEP, WPA/WPA2).
7. Mobility & Load and Congestion Window Size.
8. server mobility on the network performance: Load (bits/sec) , Congestion Window Size. (bytes) , and Traffic Received (bytes).
9. Queuing Disciplines and VoIP.
10. Network Security and Virtual Private Networks.
11. Network Application Performance Analysis.
12. Connection-Oriented, Cell-Switching Technology.
13. Developing Android App.
14. Reverse Engineering using Apktool and dex2jar.
15. Analyzing Vulnerabilities using Static Analyzer and Fuzzer.

Course Code	Course Name	Course Category	Credits			
			L	T	P	C
CSE 414	Internet Protocols and Networking	SE	3	0	0	3

UNIT I

Network Models: Layered Tasks, The OSI Model, Layers in OSI Model, TCP/IP Protocol suite, Addressing. Connecting devices: Passive Hubs, Repeaters, Active Hubs, Bridges, Two Layer Switches, Routers, Three Layer Switches, Gateway, Backbone Networks.

UNIT II

Principles of Internetworking, Connectionless Interconnection, Application-Level Interconnection, Network Level Interconnection, Properties of the Internet, Internet Architecture, Interconnection through IP Routers TCP, UDP & IP: TCP Services, TCP Features, Segment, A TCP Connection, Flow Control, Error Control, Congestion Control, Process to Process Communication, User Datagram, Checksum, UDP Operation, IP Datagram, Fragmentation, Options, IP Addressing: Classful Addressing, IPV6.

UNIT III

Transport layer Protocols: Transport Layer Services, UDP and TCP protocols, Flow control and Error control in Transport layer, Flow control mechanisms in Transport layer.

UNIT IV

Data Traffic, Congestion, Congestion Control, Congestion Control in TCP, Congestion Control in Frame Relay, Source Based Congestion Avoidance, DEC Bit Scheme, Quality of Service, Techniques to Improve QOS: Scheduling, Traffic Shaping, Admission Control, Resource Reservation, Integrated Services and Differentiated Services.

UNIT V

Concepts of Buffer Management, Drop Tail, Drop Front, Random Drop, Passive Buffer Management Schemes, Drawbacks of PQM, Active Queue Management: Early Random Drop, RED Algorithm.

TEXTBOOKS/REFERENCES

1. Douglas. E. Comer, "Internetworking with TCP/IP ", Volume I PHI.
2. Behrouz A Forouzan, "TCP/IP Protocol Suite", TMH, 3rd Edition.
3. B.A. Forouzan, "Data communication & Networking", TMH, 4th Edition.

Course Code	Course Name	Course Category	Credits			
			L	T	P	C
CSE 414 L	Internet Protocols and Networking Lab	SE	0	0	2	1

LIST OF PRACTICAL EXPERIMENTS

1. Install and Configure Wired and Wireless NIC and transfer files between systems in LAN and Wireless LAN.
2. Study basic network command and network configuration commands.
3. Configure Host IP, Subnet Mask and Default Gateway in a System in LAN (TCP/IP Configuration).
4. Establish Peer to Peer network connection using two systems using Switch and Router in a LAN.
5. Configure a Network topology using Packet Trace.
6. Configure Internet connection and use IPCONFIG, PING / Tracer and Net stat utilities to debug the network issues.
7. Transfer files between systems in LAN using FTP Configuration, install Print server in a LAN and share the printer in a network.
8. Set up a network that utilizes TCP as its end-to-end transmission protocol, and analyse the size of the congestion window with different mechanisms.
9. Implement flow control so that a fast sender will not overrun a slow receivers' buffer.
10. Implement RED algorithm DEC Bit scheme in TCP.
11. Implement the Drop Tail Buffer Management Policies.
12. Implement the Drop Front Buffer Management Policies.
13. Implement the Random Drop Buffer Management Policies.
14. Implement the Early Random Drop Buffer Management Policies.
15. Implement RED algorithm.

Big Data and Analytics Stream

Course Code	Course Name	Course Category	Credits			
			L	T	P	C
CSE 310	Data Warehousing and Mining	SE	3	0	0	3

UNIT I

Data warehousing and Online Analytical Processing: Basic concepts of Data Warehouse – Data Warehouse Modelling – Data Warehouse Design and Usage – Data Warehouse Implementation – Data Generalization by Attribute-oriented Induction.

UNIT II

Data Mining: Knowledge Discovery from Data – Types of Data - Data Mining Functionalities – Data Preprocessing – Data Cleaning – Data Integration – Data Reduction – Data Transformation and Data Discretization. Association Rule Mining – Frequent Itemset Mining methods – Pattern Evaluation Methods.

UNIT III

Classification – Basic Concepts – Decision Tree Induction – Bayes Classification Methods – Rule based Classification – Model Evaluation and Selection – Techniques to improve Classification Accuracy

UNIT IV

Clustering – Cluster Analysis – Partitioning Methods – Hierarchical Methods – Density-Based Methods – Grid Based Methods – Evaluation of Clustering.

UNIT V

Data Mining Trends and Research Frontiers - Mining Complex Data types – Other Methodologies of Data Mining – Data Mining Applications – Data Mining and Society – Data Mining trends.

CSE 310 L	Data Warehousing and Data Mining Lab	SE	0	0	2	1

LIST OF PRACTICAL EXPERIMENTS

1. **Week 1:** Implementation of OLAP operations.
2. **Week 2:** Data pre-processing techniques.
3. **Week 3:** Write a program in any programming language to generate at least 10,000 transactions in a text file with at least three items.
4. **Week 4 & 5:** Write a program to implement the APRIORI algorithm.
5. **Week 6 & 7:** Write a program for FP-Growth algorithm.
6. **Week 8 & 9:** Write a program to implement Decision tree-based classification.
7. **Week 10 & 11:** Write a program to implement Bayesian classification.
8. **Week 12:** Write a program to implement K-means clustering.
9. **Week 13:** Write a program to implement Divisive clustering.
10. **Week 14:** Write a program to implement Agglomerative clustering.
11. **Week 15:** Write a program to implement DBSCAN clustering.

Course Code	Course Name	Course Category	Credits			
			L	T	P	C
CSE 338	Applied Data Science	SE	3	0	0	3

UNIT I: INTRODUCTION

Introduction to Data Science, Data vs. Big Data, Statistical Inference - Populations and samples, Statistical modeling, probability distributions, fitting a model. Data Science Process, Exploratory Data Analysis, Basic tools - plots, graphs and summary statistics of EDA.

Statistical Learning: f estimate. Trade-Off between prediction accuracy and model interpretability. Supervised Vs. Unsupervised Learning. Assessing Model Accuracy. Measuring the Quality of Fit. The Bias-Variance Trade-Off. Introduction to R. Basic Commands. Graphics. Indexing Data. Loading Data. Additional Graphical and Numerical Summaries

UNIT II

Basic Machine Learning Algorithms - Linear Regression - K-Nearest Neighbors (K-NN) - K-means, K-Medoids, Naive Bayes. Case Study: Real Direct (online real estate firm), Filtering Spam - Linear Regression and K-NN and Naive Bayes for Filtering Spam. Data Wrangling: APIs and other tools for scrapping the Web - Feature Generation and Feature Selection (Extracting Meaning from Data) - Motivating Application and Case Study: User (customer) retention - Feature Generation - Feature Selection algorithms – Filters; Wrappers; Decision Trees; Random Forests.

UNIT III

Recommendation Systems: Building a User-Facing Data Product - Algorithmic ingredients of a Recommendation Engine - Dimensionality Reduction - Singular Value Decomposition - Principal Component Analysis.

UNIT IV

Mining Social-Network Graphs - Social networks as graphs - Clustering of graphs - Direct discovery of communities in graphs - Partitioning of graphs - Neighborhood properties in graphs.

UNIT V

Data Visualization - Basic principles, ideas and tools for data visualization – Case Study 1 on industry projects – Case Study 2: Create Complex visualization dataset - Data Science and Ethical Issues - Discussions on privacy, security, ethics - Next-generation data scientists.

CSE 338 L	Applied Data Science Lab	SE	0	0	2	1

LIST OF PRACTICAL EXPERIMENTS

1. Write a python program to apply datafication concepts of friendship network of your face book account.
2. Write python program to calculate the central tendency of any popular data set. The inbuilt functions in the python should not be used.
3. Write R – Programming to plot various charts and graphs. You have to consider minimum two popular data sets and draw all the statistical observations.
4. Write a python Program to apply EDA on any two popular data sets and provided your analysis and interpretations. Use matplotlib library of python along with other libraries for the analysis and interpretation.
5. Write Python program to implement Linear Regression using inbuilt python Library. Also, write your own program to implement Linear Regression without using the inbuilt function. Compare and contrast the results.
6. Write Python program to implement K-Nearest Neighbors using inbuilt python Library. Also, write your own program to implement K-Nearest Neighbors without using the inbuilt function. Compare and contrast the results.
7. Write Python program to implement K-Means using inbuilt python Library. Also, write your own program to implement K-Means without using the inbuilt function. Compare and contrast the results.
8. Write a python program to implement a Spam Filter using Linear Regression and K-NN. Use a popular dataset.
9. Write a Python Program to Scrapping the Web using suitable API. Create a usable dataset for classification and clustering purpose.
10. Write a python program to generate the features from the data set created by you for exercise 9.
11. Write a Python Program to implement Filter and Wrappers.
12. Write a Python Program to implement Decision Trees, Random Forests – The inbuilt functions should not be used for the implementation.
13. Write a python Program to implement Singular Value Decomposition and Principal Component Analysis. Use any popular data set.
14. Write a python Program to extract the friendship details of your face book account as Social network Graph and represent in various visual forms.
15. Write a python program to extend the above exercise to discover the communities in the graph, partition the graph and extracting the neighborhood properties of the graphs.
16. Write Python Program using Bokeh 2.1.1 realize the all the basic principles of data visualization.
17. Consider any popular dataset and present complex visualization principle using Bokeh 2.1.1.

Course Code	Course Name	Course Category	Credits			
			L	T	P	C
CSE 417	Principles of Big Data Management	SE	3	0	0	3

UNIT I

Understanding Big Data – Concepts and Terminology – Big Data Characteristics – Different types of Data – Big Data Storage concepts – Clusters – File systems and distributed file systems – NoSQL – Sharding – Replication – CAP theorem – BASE - Hadoop Distributed File System (HDFS) Architecture - HDFS commands for loading/getting data - Accessing HDFS through Java program.

UNIT II

Big Data Processing Concepts – Parallel Data Processing – Distributed Data Processing – Hadoop – Processing workloads – Batch processing with MapReduce – Map and Reduce Tasks – MapReduce Example

UNIT III

Hadoop ecosystem and its components– Flume - Sqoop - Pig - Spark - Hbase.

UNIT IV

Querying big data with Hive: Introduction to Hive QL - Hive QL: data definition- data manipulation – Hive QL Queries.

UNIT V

Data Analytics using R: Introduction to R, Creating a dataset, Getting started with graphs, Basic data management, Advanced data management.

TEXTBOOKS/REFERENCES

1. Big Data Fundamentals: concepts, Drivers and Techniques: Person Education, 2016
2. Hadoop The Definitive Guide, IV edition, O'Reilly publications
3. Hadoop in Action, Chuck lam, Manning publications
4. Programming, Hive, O'Reilly publications,
5. Apache Hive Cookbook, PACKT publications
6. R in Action, Robert I. Kabacoff, Manning publications
7. Practical Data Science with R, Nina Zumel John Mount, Manning publications.

Course Code	Course Name	Course Category	Credits			
			L	T	P	C
CSE 417 L	Principles of Big Data Management Lab	SE	0	0	2	1

LIST OF PRACTICAL EXPERIMENTS

- 1.a. Hadoop Installation
 - b. Hadoop Shell Commands
- 2.a. Writing a file from local file system to Hadoop Distributed file system (HDFS)
 - b. Reading a file from HDFS to the local file system.
- 3.a. Implementation of Word Count program using MapReduce without combiner logic.
 - b. Implementation of Word Count program using MapReduce with combiner logic.
4. Weather data analysis for analyzing hot and cold days using MapReduce.
5. Implementation of MapReduce algorithm for Matrix Multiplication.
6. Implement a MapReduce program to identify “common friends” among all pairs of users.
7. Transfer data between Hadoop and relational database servers using Sqoop.
8. Read a text file from HDFS into RDD using Spark.
9. Use HiveQL to analyze the stock exchange dataset and calculate the covariance between the stocks for each month. This will help a stock-broker in recommending the stocks to his customers.
10. Implement JOINS using HIVE
 - a. Inner Join
 - b. Left outer join
 - c. Right outer Join
 - d. Full outer join
11. Write a R program to create a student record using the Vector concept.
12. Write a R program to create medical patients status using data frame
 - i) Patient age ii) Gender iii) Symptoms iv) Patient Status
13. Write a R program to visualize student marks of various subjects using Bar-chart and Scatter plot

Course Code	Course Name	Course Category	Credits			
			L	T	P	C
CSE 419	Information Retrieval	SE	3	0	0	3

UNIT I

Introduction to information retrieval, IR problem, IR system, The Web, Search interface, Visualizing search interface, Inverted index and boolean queries, Tokenization, Stemming, Stop words, Phrases, Phrases queries, Index construction, Index compression, k-gram indexes

UNIT II

Retrieval models: Boolean, Vector space model, TF-IDF, The cosine measure, Document length normalization, Probabilistic models, Binary Independence Model, Okapi, Language modeling, Evaluating IR system: User happiness, Precision, Recall, F-measure, Normalized recall, Evaluation problems

UNIT III

Relevance feedback and Query expansion: Explicit relevance feedback, Explicit relevance feedback through clicks, Implicit feedback through local analysis, Implicit feedback through global analysis

Document format, Markup language, Text properties, Document processing, Document organization, Text compression, Query languages, Query properties

UNIT IV

Text/Document classification, Clustering and LSI: Introduction to classification, Naive Bayes models, Rocchio classification, k-Nearest Neighbors, Support vector machine classifiers, Decision trees, Bagging, Boosting, Choosing right classifier

Introduction to clustering, Evaluation of clustering, k-means clustering, Hierarchical agglomerative clustering, Divisive clustering; Low-rank approximations, Latent semantic indexing

UNIT V

Web IR: Hypertext, Web crawling, Indexes, Search engines, Ranking, Link analysis, Page Rank, HITS

TEXTBOOKS & REFERENCES

			L	T	P	C
CSE 419 L	Information Retrieval Lab	SE	0	0	2	1

LIST OF PRACTICAL EXPERIMENTS

1. Tokenization, Stemming, Stop words removal, Inverted index construction - Token sequence, Sort, Dictionary & Postings, Implementation of Boolean queries.
2. Ranked retrieval - Implementation of TF-IDF, Vector space model, Cosine similarity.
3. Ranked retrieval - Implementation of Binary Independence Model, Okapi BM25.
4. Implementation of Text/Document classification algorithms - Naive Bayes models, Rocchio classification, k-Nearest Neighbors, Support vector machine classifiers, Decision trees, Bagging, Boosting.
5. Implementation of Text/Document clustering algorithms - k-means clustering, Hierarchical agglomerative clustering, Divisive clustering.
6. Implementation of Low-rank approximations, Latent semantic indexing.
7. Sort-based index construction.
8. Implementation of External memory indexing - BSBI, SPIMI.
9. Implementations of Dynamic indexing - Logarithmic merge.
10. Dictionary compression - Implementation of Blocking, Posting Compression - Implementation of Gamma codes.
11. Development of a Web Crawler and a small-scale web search engine - Ranking, PageRank, HITS.

Distributed and Cloud Computing

Course Code	Course Name	Course Category	Credits			
			L	T	P	C
CSE 316	Distributed Systems	SE	3	0	0	3

UNIT I: INTRODUCTION AND ARCHITECTURES

Introduction: Definition of a distributed system, Goals, types of distributed systems
Architectures: Architecture styles, System architectures, Architectures versus middleware, Self-management in distributed systems.

UNIT II: PROCESSES AND COMMUNICATION

Processes: Threads, Virtualization, Clients, Servers, Code Migration. Communication: Fundamentals, Remote Procedure Call, Message and Stream oriented communication, Multicast communication.

UNIT III: NAMING AND SYNCHRONIZATION

Naming: Flat naming, Structured naming, Attribute-based naming. Synchronization: Clock synchronization, Logical clocks, Mutual exclusion, Election algorithms.

UNIT IV: CONSISTENCY AND REPLICATION

Replication as Scaling Technique, Data-Centric Consistency Models: Continuous Consistency, Data-Centric Consistency Models: Consistent Ordering of Operations, Data-Centric Consistency Models: Consistent Ordering Of Operations, Replica-Server Placement, Replica-Server Placement, Content Distribution, Continuous Consistency, Primary-Based Protocols, Replicated-Write Protocols, Cache-Coherence Protocols.

UNIT V: FAULT TOLERANCE AND SECURITY

Fault tolerance: Introduction, Process Resilience, Reliable client server communication, Reliable group communication, Distributed Commit, Recovery. Security: Secure channels, Access control, Security Management.

LIST OF PRACTICAL EXPERIMENTS

1. Experiment-1: Implement concurrent echo client-server application.
2. Experiment -2: Implement concurrent day-time client-server application.
3. Experiment-3: Configure following options on server socket and tests them:
SO_KEEPALIVE, SO_LINGER, SO_SNDBUF, SO_RCVBUF, TCP_NODELAY
4. Experiment -4: Simulate the functioning of Lamport's Logical Clock in C.
5. Experiment -5: Simulate the Distributed Mutual Exclusion in C.
6. Experiment -6: Implement Java RMI mechanism for accessing methods of remote systems.
7. Experiment -7: Simulate Balanced Sliding Window Protocol in C.
8. Experiment -8: Incrementing a counter in shared memory.
9. Experiment -9: Create CORBA based server-client application.
10. Experiment -10: Design XML Schema and XML instance document.
11. Experiment -11: SOAP based: Implement Arithmetic Service that implements add and subtract operations /Java based: Implement Trigonometric Service that implements sin, and cos operations.

Course Code	Course Name	Course Category	Credits			
			L	T	P	C
CSE 318	Cloud Computing	SE	3	0	0	3

UNIT I

Distributed system models: Scalable computing over the internet, Technologies for network-based systems, System models and software environments for distributed and cloud computing, performance, security and Energy Efficiency Computer clusters for Scalable parallel computing: Clustering for Massive parallelism, Computer clusters and MPP Architectures, Design principles of computer clusters, Cluster job and resource management.

UNIT II

Virtual Machines and Virtualization of Data Centres: Implementation levels of virtualization, Virtualization structures, tools and mechanisms, Virtualization of CPU, Memory and I/O devices, Virtual clusters and resource management, Virtualization for Data center automation.

UNIT III: NAMING AND SYNCHRONIZATION

Cloud computing and service models, Data center design and interconnection networks, Architectural design of Compute and storage clouds, Public cloud platforms, Inter-cloud resource management, Cloud security and trust management.

UNIT IV: CONSISTENCY AND REPLICATION

Services and service-oriented architecture, Message oriented middleware, Portals and science gateways, Discovery, Registries, Meta data and databases. Workflow in service-oriented architectures,

UNIT V: FAULT TOLERANCE AND SECURITY

Features of cloud and Grid platforms, Parallel and distributed programming paradigms, Programming support for Google application engine, Programming on Amazon AWS and Microsoft Azure, Emerging cloud software environments.

TEXTBOOKS

1. Cloud Computing, Theory and Practice, Dan C Marinescu, MK Elsevier.
2. Cloud Computing: Principles and Paradigms, Rajkumar Buyya, James Broberg, Andrzej M. Goscinski, Wiley.

REFERENCES

1. Distributed and Cloud Computing. Kal Hwang. Geoffeiy C. Fox. Jack J. Dongarra. Elsevier. 2012.
2. Cloud computing, Black book. Deven Shah, Kailash Jayaswal, Donald J. Houde, Jagannath Kallakurchi.
3. Cloud Computing: Concepts, Technology & Architecture (The Prentice Hall Service Technology Series from Thomas Erl) 1st Edition, Thomas Erl (Author), Ricardo Puttini , Zaigham Mahmood.

Course Code	Course Name	Course Category	Credits			
			L	T	P	C
CSE 318 L	Cloud Computing Lab	SE	0	0	2	1

LIST OF PRACTICAL EXPERIMENTS

1. Basics of Virtualization: VMM, Example of VMM (virtualbox), Creation of a VM, Networking and communication between VMs.
2. Introduction to CloudSim: Installation and Execution, Cloud Datacenter, Network Topology.
3. Simulation of a Cloud Framework: Creating a DC, Creation of Tasks, Creation of VMs, Defining task and VM characteristics, execution of tasks on VMs.
4. Scalable and dynamic Cloud systems: Creation of scalable cloud entities, creation of dynamic entities.
5. Resource Allocation in Cloud Datacenter: Experimenting and understanding various resource allocation policies, Changing the resource allocation policy, effects of resource allocation policies.
6. Power Management in Cloud Datacenters: Creation of a power datacenter, understanding various power saving techniques.
7. Understanding Commercial Cloud Frameworks: Amazon AWS, Elastic Cloud, Amazon Load Balancer, creating VMs, Allocation of Resources.

Course Code	Course Name	Course Category	Credits			
			L	T	P	C
CSE 416	Cloud Data Management	SE	3	0	0	3

Unit-I: Introduction to Distributed File Systems and Cloud: Introduction to Distributed File Systems, Cloud Computing, Cloud Data Management and its Goals & Challenges, Models of Cloud Data Management, Cloud Data Management Basics, Cloud Data Storage, Reasons to Use Cloud Data Management.

UNIT II: Cloud Data Management & its Applications: Large data processing using Map-Reduce; big data technologies and tools; data modelling, storage, indexing, and query processing for big data; key-value storage systems, columnar databases, NoSQL systems; big data applications. Multi-tenant database systems: Multitenancy, Scalable, Consistent, database elasticity in the cloud.

UNIT III: Azure database service platform: Understanding the Service, Designing SQL Database, Migrating an Existing Database, Using SQL Database, Scaling SQL Database, Governing SQL Database. MySQL and PostgreSQL.

UNIT IV: Cloud Data Management Techniques: Hybrid cloud features, migrate databases to Azure IaaS, Run SQL Server on Microsoft Azure Virtual Machines, Considerations on High Availability and Disaster Recovery Options with SQL Server on Hybrid Cloud and Azure IaaS, Working with NoSQL Alternatives.

Unit V: Cloud Data Security and Privacy: Aspects of Data Security, Defining Organizational Cloud Security Responsibilities, Assessing Risk in the Cloud, Existing Security Tools, Building a Security Strategy.

TEXTBOOKS

1. Faithe Wempen. Cloud Data Management For Dummies®, Druva Special Edition. John Wiley & Sons, Inc., 2017.
2. Lawrence Miller. Cloud Security & Compliance For Dummies®, Palo Alto Networks® Special Edition. John Wiley & Sons, Inc., 2019.
3. Data management in the cloud: challenges and opportunities: Divyakant Agrawal, Sudipto das, AmrEI Abbadi, 2013.
4. Cloud data design, Orchestration and Management using Microsoft Azure, Francesco Diaz Roberto Freato, Apress, Springer publications, 2018.

REFERENCES

1. Andrew S. Tanenbaul, Maarten Van Steen, Distributed Systems, Principles and Paradigms, Pearson publications, 2nd edition.
2. Cloud database development and Management, Lee chao, CRC Press, Taylor and Francis group. 2014.
3. Cloud data management, Liang Zhao, Sherif Sakr, Anna Liu, Athman Bouguettaya, Springer publications, 2014.

Course Code	Course Name	Course Category	Credits			
			L	T	P	C
CSE 416 L	Cloud Data Management Lab	SE	0	0	2	1

LIST OF PRACTICALS EXPERIMENTS

1. **Week 1: Designing SQL Database in Azure**
Using Database Projects (or other similar tools) to create and manage the development of the database.
Connection modes:
 - outside Azure
 - inside Azure
2. **Week 2: SQL Database Options**
Analyze the various SQL database options: Single Database with a Single Schema, Single Database with Different Schemas and other
3. **Week 3: Indexes**
Index creation, Index evaluation, Index management for a table
Automatic Tuning
4. **Week 4: Migration**
Migrate an existing SQL Server database to Azure SQL Database.
 - a. Preparing the Database
 - b. Moving the Database
 - c. Exporting the DB
5. **Week 5: Scaling**
Dynamically scale database resources with minimal downtime
6. **Week 6: Governing SQL Database**
Value-added services of SQL Database
 - a. Authentication
 - b. Firewall
 - c. Encryption
7. **Week 7: Encryption**
Apply different database encryption methods to a database.
 - a. Transparent Data Encryption
 - b. Always Encrypted
 - c. Dynamic Data Masking
 Explore different backup and monitoring options of Azure Databases
8. **Week 8: SQL Server 2017**
Connect to SQL Server instance
 - a. Create a database
 - b. Create tables under the database
9. **Week 9: Azure Storage**
Create a Storage Account in Azure portal
Add a managed data disk to a SQL Server virtual machine
10. **Week 10: Backup on Azure**
Create SQL Server Backup to URL.
11. **Week 11: Backup on Azure**
Create a SQL Server Managed Backup to Microsoft Azure.

Take snapshots of data and log files that are placed into Azure Storage using File-Snapshots Backups.

12. **Week 12: Restore**

Create a SQL Server Managed Backup to Microsoft Azure feature.

Access backup data from Azure Storage taken using SQL Server Managed Backup and Restore it.

13. **Week 13:**

Use Azure Storage to host SQL Server Database Files and Use Azure Snapshots

14. **Week 14:**

Migrate a Database Using the Data-Tier Application Framework

15. **Week 15:**

Use Azure Storage to host SQL Server Database Files and Use Azure Snapshots

Explore the High Availability and Disaster Recovery Options with SQL Server On Hybrid Cloud and Azure IaaS

Course Code	Course Name	Course Category	Credits			
			L	T	P	C
CSE 418	Service Oriented Computing	SE	3	0	0	3

UNIT I: WEB SERVICE FUNDAMENTALS

Introduction to Web Services - fundamental of web services, basic operational model of web services, Business motivations for web services, B2B, B2C, Technical motivations, basic steps of implementing web services, benefits and challenges of using web services, tools and technologies enabling web services, Web services Architecture and its characteristics, web services communication models, core building blocks of web services, web services technology stack. Orchestration, Choreography. Service layer Abstraction - Application Service Layer, Business Service Layer, Orchestration Service Layer.

UNIT II: SERVICE ORIENTED ARCHITECTURE

Service-oriented Architecture (SOA), implementation view, logical view, process view, deployment view, composition of web services, from application server to peer to peer, life in the runtime. Characteristics of SOA, Comparing SOA to client-server and distributed internet architectures, Anatomy of SOA, How components in an SOA interrelate. Fundamentals of SOAP-SOAP Message Structure, SOAP encoding, Encoding of different data types, SOAP communication and messaging, SOAP message exchange models, limitations of SOAP. REST Protocol, SOAP vs REST.

UNIT III: SERVICE ORIENTED PLATFORMS

WSDL, Anatomy of WSDL, manipulating WSDL, web service policy, UDDI, Anatomy of UDDI, UDDI- UDDI registries, uses of UDDI Registry, UDDI data structures, Programming with UDDI, Publishing, searching and deleting information in a UDDI Registry, Publishing API, limitations of UDDI, Discovering Web Services, service discovery mechanisms, role of service discovery in a SOA, Service Selection. SOA support in J2EE: Java API for XML based web services (JAX-WS), Java architecture for XML binding (JAXB), Java API for XML Registries (JAXR), Java API for XML based RPC (JAXRPC), Web Services Interoperability Technologies (WSIT). SOA support in .NET: Common Language Runtime, ASP.NET web forms, ASP.NET web services, Web Services Enhancements (WSE).

UNIT IV: APPLICATION DEVELOPMENT USING OPEN STACK

Understanding Open stack eco system: Open stack Heat, Open stack Database As A Service: Trove, Designate: Dns As A Service, Magnum, Murano: Application As A Service, Ceilometer: Telemetry As A Service, Application development and deployment in Open stack: Building applications from the scratch, converting legacy applications into Open stack applications. Event Driven Programs with Cloud.

UNIT V: MONITORING AND METERING

Monitoring and metering, Updating and patching. Kubernetes: Concepts, Cluster Architecture, Containers and Dockers, Workloads, Services, Load Balancing, and Networking, Policies, Scheduling and Eviction, Cluster Administration. Apigee Edge, API development lifecycle.

TEXTBOOKS

1. Service-Oriented Architecture: Concepts, Technology, and Design By Thomas Erl, Pearson Education India.

2. OpenStack Cloud Application Development by Scott Adkins, John Belamaric, Vincent Giersch, Denys Makogon, Jason E. Robinson, Wrox.
3. Mastering kubernetes: Sayfan, Gigi, Packt Publishing Ltd.

REFERENCES

1. Service Oriented Computing: Semantics, Processes, Agents: Munindar Singh & Michael Huhns, Wiley Publication.
2. Enterprise SOA Designing IT for Business Innovation: Dan Woods and Thomas Mattern , O'REILLY.
3. Service-oriented Architecture for Enterprise Applications: Shankar Kambhampaty, John Wiley & Sons.
4. SOA using Java™ Web Services: Mark D Hansen, Prentice Hall Publication.

Course Code	Course Name	Course Category	Credits			
			L	T	P	C
CSE 418 L	Service Oriented Computing Lab	SE	0	0	2	1

LIST OF PRACTICAL EXPERIMENTS

1. Develop Java Based Program using JAXP or XML API in reading XML file for Students Information and Display HTML Table.
2. Develop Java Based web Service using REST and SOAP Based web service in Netbeans for University Course List and Search Course based Course Title and Course ID.
3. Create web calculator service in .NET Beans and create Java client to consume this web service.
4. Develop same web service using JX-WS.
5. Create web calculator service in .NET and Create java client to consume web service. developed using Apache AXIS.
6. Using WS –GEN and WS-Import develop the java web service & call it by Java Client.
7. Open stack Heat.
8. Opens tack Database As A Service: Trove.
9. Designate: DNS As A Service.
10. Magnum.
11. Murano: Application As A Service.
12. Building applications from the scratch.
13. converting legacy applications into Open stack applications.
14. Kubernetes: Containers and Dockers.
15. Kubernetes: Load Balancing, Scheduling.

Internet of Things (IoT) Stream

Course Code	Course Name	Course Category	Credits			
			L	T	P	C
CSES 337	Cryptography	SE	3	0	0	3

UNIT I

History and overview of cryptography, Classical Encryption Techniques: Symmetric Cipher Model, Substitution Techniques, Transposition Techniques, Rotor Machines, And Steganography

UNIT II

Stream Ciphers and Block Ciphers, Attacks on block ciphers, Block Cipher Principles, The Data Encryption Standard (DES), Block Cipher Design Principles, Group, Rings, Field, Polynomial Arithmetic, The Euclidean Algorithm, Finite Fields of the Form $GF(2^n)$

UNIT III

Advanced Encryption Standard (AES), Stream Ciphers, RC4, The Chinese Remainder Theorem, Public Key Cryptography and RSA Algorithm, Diffie-Hellman Key Exchange, Elliptic Curve Cryptography.

UNIT IV

Cryptographic Hash Functions: Applications of Cryptographic Hash Functions, Two Simple Hash Functions, Requirements and Security, Secure Hash Algorithm (SHA), SHA-3.

UNIT V

Introduction to Block Chain, Bitcoin basics, Smart Contracts, Blockchain development platforms and APIs, Blockchain Ecosystems, Ethereum, Distributed Consensus, Blockchain Applications

TEXTBOOKS/REFERENCES

- 1) Stallings, William. Cryptography and network security, Principle and Practice. Pearson Education India, 2017.
- 2) R. Stinson Cryptography, Theory and Practice (Fourth Edition Edition)
- 3) Handbook of Applied Cryptography by A. Menezes, P. Van Oorschot, S. Vanstone.
- 4) Melanie Swan, Blockchain, Blueprint for a new Economy, O'Reilly

Course Code	Course Name	Course Category	Credits			
			L	T	P	C
CSE 337 L	Cryptography Lab	SE	0	0	2	1

LIST OF PRACTICAL EXPERIMENTS

1. Write a program take text file as an input and print word, character count and ascii value of each characters as output. (Hint: Use open(), read() and split()).
2. Write a encryption program: Input: computerscienceengineeringssrmuniversity Output: gsqtyxivwgmirgiirkmriivmrkwvqyrmzivwmxc Hint: key =4 (play with ascii value).
3. Raju send an encrypted message (cipher text) “PHHW PH DIWHU WKH WRJD SDUWB” to Rani. Can you build decryption process and find out what is the message (plain text) send to Rani? Hint: try all keys.
4. Raju send encrypted message “ZICVTWQNGKZEIIGASXSTSLVWLA” to Rani. Can you build decryption process and find out what is the message send to Rani. Hint: try all keys for each character.
5. Kohli have plain text “wewishtoreplaceplayer”. Can you build encryption process and find out what is the cipher text he needs send to BCCI. Help him out by using monoalphabetic cipher. Hint: use any one-to-one mapping between alphabets.

One to one

	A	B	C	D	E	F	G	H	I	J	K	L	M	N	O	P	Q	R	S	T	U	V	W	X	Y	Z
mapping	A	N	D	R	E	W	I	C	K	S	O	H	T	B	F	G	J	L	M	P	Q	U	V	X	Y	Z

6. Kohli sent encrypted message (Cipher text) “SEEMSEAOMEDSAMHL” to Anushka. Can you build decryption process and find out what is the message (plain text) send to Anushka. Hint: use above one to one mapping between alphabets.
7. Raju want to build encrypted and decryption algorithms of Playfair Cipher. Help him to build a key matrix using the key “srmapuniversity”
8. By using key matrix Raju want to send message “we are discovered save yourself” to Rani. Can you build encryption process and find out what is the cipher text message send to Rani by using playfaircipher.

s	r	m	a	p
u	n	i/j	v	e
t	y	b	c	d
f	g	h	k	l
o	q	w	x	z

9. By using key “CBDE” Raju would like send message (plain text)“HELLO WORLD” to Rani. Can you build encryption process and find out what is the encrypted message (cipher text) to Raju by using Hill Cipher.Also Can you build decryption process and find out what is the decrypted message (plain text) of cipher text "SLHZYATGZT" by using Hill Cipher.
10. Implementation of Encryption and Decryption of Vigenère Cipher
keyword *deceptive*
key: deceptivedeceptivedeceptive
plaintext: wearediscoveredsaveyourself
ciphertext: ZICVTWQNGRZGVTWAVZHCQYGLMGJ
11. Implement the Encryption and Decryption of Row Transposition.

Key: 4 3 1 2 5 6 7

Plaintext: a t t a c k p

o s t p o n e

d u n t i l t

w o a m x y z

Ciphertext: TTNAAPTMTSUOAODWCOIXKNLYPETZ

12. Implement the Euclidean Algorithm for integers and polynomials.
13. Implement AES Key Expansion.
14. Implementation of AES encryption and decryption
15. Implementation of Simplified DES Encryption and decryption
16. Implementation of RC4
17. Implementation of RSA algorithm
18. Implementation of Diffie-Helman key exchanges
19. Implementation of elliptic-curve cryptography
20. Implementation of Hash functions

Course Code	Course Name	Course Category	Credits			
			L	T	P	C
CSE 318	Cloud Computing	SE	3	0	0	3

UNIT I

Distributed system models: Scalable computing over the internet, Technologies for network-based systems, System models and software environments for distributed and cloud computing, performance, security and Energy Efficiency Computer clusters for Scalable parallel computing: Clustering for Massive parallelism, Computer clusters and MPP Architectures, Design principles of computer clusters, Cluster job and resource management.

UNIT II: PROCESSES AND COMMUNICATION

Virtual Machines and Virtualization of Data Centres: Implementation levels of virtualization, Virtualization structures, tools and mechanisms, Virtualization of CPU, Memory and I/O devices, Virtual clusters and resource management, Virtualization for Data center automation.

UNIT III: NAMING AND SYNCHRONIZATION

Cloud computing and service models, Data center design and interconnection networks, Architectural design of Compute and storage clouds, Public cloud platforms, Inter-cloud resource management, Cloud security and trust management.

UNIT IV: CONSISTENCY AND REPLICATION

Services and service-oriented architecture, Message oriented middleware, Portals and science gateways, Discovery, Registries, Meta data and databases. Workflow in service-oriented architectures.

UNIT V: FAULT TOLERANCE AND SECURITY

Features of cloud and Grid platforms, Parallel and distributed programming paradigms, Programming support for Google application engine, Programming on Amazon AWS and Microsoft Azure, Emerging cloud software environments.

LIST OF PRACTICAL EXPERIMENTS

1. Basics of Virtualization: VMM, Example of VMM (virtual box), Creation of a VM, Networking and communication between VMs.
2. Introduction to Cloud Sim: Installation and Execution, Cloud Data centre, Network Topology,
3. Simulation of a Cloud Framework: Creating a DC, Creation of Tasks, Creation of VMs, Defining task and VM characteristics, execution of tasks on VMs.
4. Scalable and dynamic Cloud systems: Creation of scalable cloud entities, creation of dynamic entities.
5. Resource Allocation in Cloud Data centre: Experimenting and understanding various resource allocation policies, Changing the resource allocation policy, effects of resource allocation policies.
6. Power Management in Cloud Data centres: Creation of a power data centre, understanding various power saving techniques.
7. Understanding Commercial Cloud Frameworks: Amazon AWS, Elastic Cloud, Amazon Load Balancer, creating VMs, Allocation of Resources.

Course Code	Course Name	Course Category	Credits			
			L	T	P	C
CSE 317	Embedded Systems	SE	3	0	0	3

UNIT I: INTRODUCTION TO EMBEDDED SYSTEMS

Introduction, characteristics of embedding computing applications, concept of real time systems, designing of hardware and software components, challenges in embedded system design, Safety and Security of an Embedded System, Performance of Embedded Systems.

UNIT II: INSTRUCTION SET OF PROCESSORS

Overview of various features of Computer Architecture, Instruction-set of ARM family of processors, Instruction-set of PIC family of Processors, Digital Signal Processor, Instruction set of TI C55X DSP. Programmed I/O, Interrupts (supported by Arm, PIC , TI C55x family of processors), Supervisor mode, exceptions, traps, co-processors, memory system, CPU power management.

UNIT III: INPUT-OUTPUT SUB-SYSTEM

I/O sub-system: busy-wait I/O, DMA, interrupt driven I/O, co-processors and hardware accelerators, Timers and counters, watchdog timers, interrupt controllers, DMA controllers, A/D and D/A converters. Component interfacing, interfacing protocols, Firewire, USB, IrDA. Sensors and Actuators.

UNIT IV: PROGRAM DESIGN AND ANALYSIS

State machine, circular buffer, stream-oriented programming, data flow graph (DFG), control flow graph (CFG), Compilation techniques, performance analysis, performance optimization, power analysis and power optimization, program validation and testing.

UNIT V: OPERATING SYSTEMS

Basic features of an operating system, Kernel features, polled loops system, co-routines, interrupt-driven system, multi-rate system, processes and threads, context switching, scheduling, task assignment, inter-process communication, Real-time Memory Management: Process stack management, dynamic allocation, synchronous and asynchronous I/O, Interrupt handling, device drivers, example real-time OS: VxWorks, RT-Linux, PSOS.

TEXTBOOKS

Course Code	Course Name	Course Category	Credits			
			L	T	P	C
CSE 317 L	Embedded Systems Lab	SE	0	0	2	1

LIST OF PRACTICAL EXPERIMENTS

1. Introduction to Software tool (preferably kiel MDK Microcontroller Development Kit) used in the lab. (2 hrs)
2. Interfacing of 8-bit ADC 0809 with 8051 Microcontroller. (1 hour)
3. Interfacing of 8-bit DAC 0800 with 8051 Microcontroller. (1 hour)
4. Implementation of Serial Communication by using 8051 serial ports. (1 hour)
5. Interfacing of individual LEDs and program them to blink after a fixed time interval. (1 hour)
6. Interfacing of 16*2 LCD panel with 8051 Microcontroller. (1 hour)
7. Interfacing of stepper motor with 8051 Microcontroller. (1 Hour)
8. A minor project is given to student to implement (7 hrs)

Course Code	Course Name	Course Category	Credits			
			L	T	P	C
CSE 319	IoT Design Protocols	SE	3	0	0	3

UNIT I: OVERVIEW

IoT-An Architectural Overview– Building an architecture, Main design principles and needed capabilities, An IoT architecture outline, standards considerations. M2M and IoT Technology Fundamentals- Devices and gateways, Local and wide area networking, Data management, Business processes in IoT, Everything as a Service (XaaS), M2M and IoT Analytics, Knowledge Management.

UNIT II: REFERENCE ARCHITECTURE

IoT Architecture-State of the Art – Introduction, State of the art, Reference Model and architecture, IoT reference Model - IoT Reference Architecture- Introduction, Functional View, Information View, Deployment and Operational View, Other Relevant architectural views. Real-World Design Constraints- Introduction, Technical Design constraints-hardware is popular again, Data representation and visualization, Interaction and remote control.

UNIT III: IOT DATA LINK LAYER & NETWORK LAYER PROTOCOLS

PHY/MAC Layer (3GPP MTC, IEEE 802.11, IEEE 802.15), Wireless HART, Z-Wave, Bluetooth Low Energy, Zigbee Smart Energy, DASH7 - Network Layer-IPv4, IPv6, 6LoWPAN, 6TiSCH, ND, DHCP, ICMP, RPL, CORPL, CARP

UNIT IV: TRANSPORT & SESSION LAYER PROTOCOLS

Layer (TCP, MPTCP, UDP, DCCP, SCTP)-(TLS, DTLS) – Session Layer-HTTP, Co AP, XMPP, AMQP, MQTT.

UNIT V: SERVICE LAYER PROTOCOLS & SECURITY

Service Layer -oneM2M, ETSI M2M, OMA, BBF – Security in IoT Protocols – MAC 802.15.4, 6LoWPAN, RPL, Application Layer.

CSE 319 L	IoT Design Protocols Lab	SE	0	0	2	1

LIST OF PRACTICAL EXPERIMENTS

Week1:

1. Study and Install IDE of Arduino and different types of Arduino Boards like Arduino uno, Arduino NG REV-C , Arduino NANO .

Week 2:

2. Write program using Arduino IDE for Blink LED.

Hardware Requirements:

1x Breadboard

1x Arduino Uno R3

1x RGB LED

1x 330Ω Resistor

2x Jumper Wires

Blinking the RGB LED:

With a simple modification of the breadboard, we could attach the LED to an output pin of the Arduino. Move the red jumper wire from the Arduino 5V connector to D13.

Week 3:

3. Develop a program using Arduino IDE and Arduino Board for RGB Led.

Hardware Requirements:

1x Breadboard

1x Arduino Uno R3

1x LED

1x 330Ω Resistor

2x Jumper Wires

Blinking the LED

With a simple modification of the breadboard, we could attach the LED to an output pin of the Arduino. Move the red jumper wire from the Arduino 5V connector to D13.

Week 4:

4. Study the temperature Sensors and write a program using Arduino IDE and Arduino Board for Temperature Sensor.

Weeks 5:

5. Study and Implement RFID, NFC using Arduino.

Hardware Requirements:

1 x Arduino UNO or 1 x Starter Kit for Raspberry Pi + Raspberry Pi

1 x Communication Shield

1 x RFID 13.56 MHz / NFC Module for Arduino and Raspberry Pi

1 x Mifare tag (card/keyring/sticker)

1 x PC

Weeks 6:

6. Write programs using Arduino IDE and Arduino Board for MQTT Protocol.

Weeks 7:

7. Write a program to Study and Configure Raspberry Pi.

Weeks 8

8. WAP for LED blink using Raspberry Pi.

Hardware Requirements:

1x Breadboard

1x Raspberry Pi

1x RGB LED

1x 330Ω Resistor

2x Jumper Wires

Weeks 9:

9. Study and Implement Zigbee Protocol using Raspberry Pi.

Week 10:

10. Study and implement 6LoWPAN Border Router Implementation for IoT Devices on Raspberry Pi.

Week 11:

11. Study and implement DTLS protocol for IoT devices using Raspberry Pi.

Week 12:

12. Study and implement CoAP protocol for IoT devices using Raspberry Pi.

Week 13:

13. Study and implement RPL protocol for IoT devices using Raspberry Pi.

Week 14

14. Study and implement MQTT protocol for IoT devices using Raspberry Pi.

Week 15:

15. Study and implement AMQP protocol for IoT devices using Raspberry Pi.

TECHNICAL ELECTIVES

TECHNICAL ELECTIVES

1.

Course Code	Course Name	Course Category	Credits			
			L	T	P	C
CSE 321	Human Computer Interaction	TE	3	0	0	3

UNIT I: FOUNDATIONS OF HCI

The Human: I/O channels – Memory – Reasoning and problem solving - The computer: Devices – Memory – Processing and networks - Interaction: Models – frameworks – Ergonomics – styles – elements – Interactivity- Paradigms.

UNIT II: DESIGN AND SOFTWARE PROCESS

Interactive design basics – Process – Scenarios – Navigation – Screen design – Iteration and prototyping - HCI in software process – Software life cycle – Usability engineering – Prototyping in practice – design rationale. Design rules – principles, standards, guidelines, rules. Evaluation Techniques – Universal Design.

UNIT III: MODELS AND THEORIES

Cognitive models –Socio-Organizational issues and stake holder requirements –Communication and collaboration Models-Hypertext, Multimedia and WWW.

UNIT IV: MOBILE HCI

Mobile Ecosystem: Platforms, Application frameworks- Types of Mobile Applications: Widgets, Applications, Games- Mobile Information Architecture, Mobile 2.0, Mobile Design: Elements of Mobile Design, Tools.

UNIT V: WEB INTERFACE DESIGN

Designing Web Interfaces – Drag and Drop, Direct Selection, Contextual Tools, Overlays, Inlays and Virtual Pages, Process Flow. Case Studies.

TEXTBOOKS

1. Alan Dix, Janet Finlay, Gregory Abowd, Russell Beale, “Human Computer Interaction”, Pearson Education.
2. Brian Fling, “Mobile Design and Development”, O’Reilly Media Inc. Bill Scott and Theresa Neil, “Designing Web Interfaces”, O’Reilly.

Course Code	Course Name	Course Category	Credits			
			L	T	P	C
CSE 322	Advanced Computer Architecture	TE	3	0	0	3

UNIT I: INSTRUCTION LEVEL PARALLELISM

ILP – Concepts and challenges – Hardware and software approaches – Dynamic scheduling – Speculation - Compiler techniques for exposing ILP – Branch prediction.

UNIT II: MULTIPLE ISSUE PROCESSORS

VLIW & EPIC – Advanced compiler support – Hardware support for exposing parallelism– Hardware versus software speculation mechanisms – IA 64 and Itanium processors–Limits on ILP.

UNIT III: MULTIPROCESSORS AND THREAD LEVEL PARALLELISM

Symmetric and distributed shared memory architectures – Performance issues – Synchronization – Models of memory consistency – Introduction to Multithreading.

UNIT IV: MEMORY AND I/O

Cache performance – Reducing cache miss penalty and miss rate – Reducing hit time – Main memory and performance – Memory technology. Types of storage devices – Buses – RAID – Reliability, availability and dependability – I/O performance measures – Designing an I/O system.

UNIT V: MULTI-CORE ARCHITECTURES

Software and hardware multithreading – SMT and CMP architectures – Design issues – Case studies – Intel Multi-core architecture – SUN CMP architecture - heterogeneous multi-core processors – case study: IBM Cell Processor.

TEXTBOOKS

Course Code	Course Name	Course Category	Credits			
			L	T	P	C
CSE 323	Natural Language Processing	TE	3	0	0	3

UNIT I: INTRODUCTION

Natural Language Processing tasks in syntax, semantics, and pragmatics – Issues – Applications – The role of machine learning – Probability Basics – Information theory – Collocations -N-gram Language Models – Estimating parameters and smoothing – Evaluating language models.

UNIT II: WORD LEVEL AND SYNTACTIC ANALYSIS

Word Level Analysis: Regular Expressions-Finite-State Automata-Morphological Parsing-Spelling Error Detection and Correction-Words and Word Classes-Part-of Speech Tagging. Syntactic Analysis: Context-free Grammar-Constituency- Parsing-Probabilistic Parsing.

UNIT III: SEMANTIC ANALYSIS AND DISCOURSE PROCESSING

Semantic Analysis: Meaning Representation-Lexical Semantics- Ambiguity-Word Sense Disambiguation. Discourse Processing: Cohesion-Reference Resolution- Discourse Coherence and Structure.

UNIT IV: NATURAL LANGUAGE GENERATION AND MACHINE TRANSLATION

Natural Language Generation: Architecture of NLG Systems- Generation Tasks and Representations- Application of NLG. Machine Translation: Problems in Machine Translation- Characteristics of Indian Languages- Machine Translation Approaches-Translation involving Indian Languages.

UNIT V: INFORMATION RETRIEVAL AND LEXICAL RESOURCES

Information Retrieval: Design features of Information Retrieval Systems-Classical, Non-classical, Alternative Models of Information Retrieval – valuation Lexical Resources: WorldNet-Frame Net-Stemmers-POS Tagger- Research Corpora.

Course Code	Course Name	Course Category	Credits			
			L	T	P	C
CSE 324	Computer Graphics	TE	3	0	0	3

UNIT I: INTRODUCTION

Application areas of Computer Graphics, overview of graphics systems, video-display devices, raster-scan systems, random scan systems, graphics monitors, and workstations and input devices

Output primitives: Points and lines, line drawing algorithms, mid-point circle and ellipse algorithms.

Filled area primitives: Scan line polygon fill algorithm, boundary-fill, and flood-fill algorithms.

UNIT II: 2-D GEOMETRICAL TRANSFORMS

Translation, scaling, rotation, reflection and shear transformations, matrix representations and homogeneous coordinates, composite transforms, transformations between coordinate systems.

2-D Viewing: The viewing pipeline, viewing coordinate reference frame, window to view-port coordinate transformation, viewing functions, Cohen-Sutherland and Cyrus-beck line clipping algorithms, Sutherland –Hodgeman polygon clipping algorithm.

UNIT III: 3-D OBJECT REPRESENTATION

Polygon surfaces, quadric surfaces, spline representation, Hermite curve, Bezier curve and B-spline curves, Bezier and B-spline surfaces. Basic illumination models, polygon rendering methods.

3-D Geometric transformations: Translation, rotation, scaling, reflection and shear transformations, composite transformations, 3-D viewing: Viewing pipeline, viewing coordinates, view volume and general projection transforms and clipping.

UNIT IV: VISIBLE SURFACE DETECTION METHODS

Classification, back-face detection, depth-buffer, scan-line, depth sorting, BSP-tree methods, area subdivision and octree methods.

UNIT V: COMPUTER ANIMATION

Design of animation sequence, general computer animation functions, raster animation, computer animation languages, key frame systems, motion specifications

TEXTBOOKS

1. Computer Graphics with Virtual Reality System, Rajesh K. Maurya, Wiley Dreamtech.
2. Computer Graphics, D. Hearn and M.P. Baker (C Version), Pearson Education

REFERENCES

Course Code	Course Name	Course Category	Credits			
			L	T	P	C
CSE 325	Advanced Data Structures and Algorithms	TE	3	0	0	3

UNIT I: ADVANCED DATA STRUCTURES

Strategies for choosing the appropriate data structures-Heaps, AVL Trees (Search, Insertion, Deletion), Red-Black Trees (Search, Insertion and Deletion), Splay Trees (Search, Insertion and Deletion), B-trees, B+ Trees (Search, Insertion and Deletion), Fibonacci heaps, Data Structures for Disjoint Sets, Augmented Data Structures.

UNIT II: GRAPHS & ALGORITHMS

Cut-sets, Connectivity and Separability, Planar Graphs, Isomorphism, Graph Coloring, Covering and Partitioning, Topological sort, Max flow: Ford Fulkerson algorithm, max flow – min cut, Dynamic Graphs, Few Algorithms for Dynamic Graphs, Union-Find Algorithms.

UNIT III: GEOMETRIC ALGORITHMS

Point location, Convex hulls and Voronoi diagrams, Arrangements, graph connectivity, Network Flow and Matching: Flow Algorithms - Maximum Flow – Cuts - Maximum Bipartite Matching - Graph partitioning via multi-commodity flow, Karger's Min Cut Algorithm, String matching and document processing algorithms.

UNIT IV: APPROXIMATION ALGORITHMS

Approximation algorithms for known NP hard problems - Analysis of Approximation Algorithms. Use of Linear programming and primal dual, Local search heuristics. Parallel algorithms: Basic techniques for sorting, searching, merging, list ranking in PRAMs and Interconnection.

UNIT V: RANDOMIZED ALGORITHMS

Introduction, Type of Randomized Algorithms, Min- Cut, 2-SAT, Game Theoretic Techniques, Random Walks. Online Algorithms: Introduction, Online Paging Problem, Adversary Models, k-server Problem

TEXTBOOKS

Course Code	Course Name	Course Category	Credits			
			L	T	P	C
CSE 326	Distributed Operating Systems	TE	3	0	0	3

UNIT I: FUNDAMENTALS

What is distributed operating system, issues in designing distributed operating system, Computer networks: Lan, WAN technologies, communication protocols, internetworking, Message passing: Issues in IPC by message passing, synchronization, buffering group communication, case study.

UNIT II: REMOTE PROCEDURE CALLS

The RPC model, Implementing RPC, RPCs in heterogeneous environment, lightweight RPC, case study. Distributed shared memory: General architecture of DSM systems, Design and implementation issues of DSM, Consistency models, Replacement strategies, Advantages of DSM.

UNIT III: PROCESS MANAGEMENT

Introduction, Process migration, Threads. Synchronization: Clock synchronization, event ordering, Mutual exclusion, deadlock, Election Algorithms. Resource management: Global scheduling algorithm, Task assignment, Load sharing and balancing approaches.

UNIT IV: DISTRIBUTED FILE SYSTEM

Desirable features of a good DFS, file models, file accessing models, file sharing semantics, file caching schemes, file replication, fault tolerance, atomic transactions, Design principles, Case study: Google DFS and Hadoop DFS.

UNIT V: NAMING

Desirable features of a good naming system, system-oriented Names, object locating mechanisms, human oriented Names, Name caches, naming and security. Security: potential attacks, cryptography, authentication, access control, digital signatures, design principles.

Course Code	Course Name	Course Category	Credits			
			L	T	P	C
CSE 420	Data and Web Mining	TE	3	0	0	3

UNIT I: INTRODUCTION TO DATA MINING

What is data mining? Related technologies - Machine Learning, DBMS, OLAP, Statistics. Data Mining Goals. Stages of the Data Mining Process, Data Mining Techniques, Knowledge Representation Methods. Data Warehouse and OLAP: Data Warehouse and DBMS, Multidimensional data model, OLAP operations .

UNIT II: DATA PRE-PROCESSING

Data cleaning. Data transformation, Data reduction. Data mining knowledge representation, Attribute-oriented analysis. Data mining algorithms: Association rules: Motivation and terminology, Basic idea: item sets, generating item sets and rules efficiently, Correlation analysis.

UNIT III: DATA MINING ALGORITHMS

Classification, Basic learning/mining tasks, inferring rudimentary rules: 1R algorithm, Decision trees, Covering rules. Data mining algorithms: Prediction, The prediction task, Statistical (Bayesian) classification, Bayesian networks, Instance-based methods (nearest neighbour), Linear models.

UNIT IV: WEB CRAWLING

Basic crawler algorithm, Focused crawlers, Topical crawlers, Web search: Web page pre-processing, Inverted index, HITS algorithm, Page ranking algorithm, Leadership algorithm.

UNIT V: SOCIAL NETWORK ANALYSIS

Co-citation and bibliographic coupling, Community discovery. Web usage mining: Recommender systems. Mining Twitter, Mining Face book, Mining Instagram.

Course Code	Course Name	Course Category	Credits			
			L	T	P	C
CSE 421	Complexity Theory	TE	3	0	0	3

UNIT I: COMPUTABILITY

A recap of automata theory and the Church-Turing Thesis Computational models: Lambda calculus, Turing machine Decidability Reducibility. The PCP problem & Mapping reducibility The Recursion Theorem Definition of Information.

UNIT II: TIME COMPLEXITY

Measuring Complexity, Big-O and small-o notation, Analyzing algorithms. Complexity relationships among computational models The Class-P, Examples The Class-NP, Examples The P versus NP question NP-completeness The Cook-Levin Theorem Additional NP-completeness Problems.

UNIT III: SPACE COMPLEXITY

Space complexity. Savitch's Theorem and NL. NL-completeness and log-space reductions. From P-completeness to PSPACE-completeness. The Classes L and NL NL completeness, NL equals coNL.

UNIT IV: INTERACTABILITY

Hierarchy Theorems Relativization Circuit Complexity.

UNIT V: ADVANCED TOPICS IN COMPLEXITY THEORY

Approximation Algorithms Probabilistic Algorithms Alternation Interactive Proof Systems.

TEXTBOOKS

1. Introduction to the Theory of Computation - Michael Sipser (Primary Textbook)
2. Computational Complexity - Arora Barak (Reference)

Course Code	Course Name	Course Category	Credits			
			L	T	P	C
CSE 422	Software Project Management	TE	3	0	0	3

UNIT I: SOFTWARE MANAGEMENT & ECONOMICS

SDLC -waterfall model Conventional Software Management Performance Evolution of Software Economics – Software economics Pragmatic software cost estimation Reducing software product size Improving software processes Improving team effectiveness Improving automation through software environment.

UNIT II: THE OLD AND THE NEW WAY OF PROJECT MANAGEMENT

The principles of conventional software engineering Principles of modern software management, Transitioning to an iterative process Basics of Software estimation – Effort and Cost estimation techniques COSMIC Full function points COCOMO-I COCOMO II A Parametric Productivity Model - Staffing Pattern.

UNIT III: SOFTWARE MANAGEMENT PROCESS FRAMEWORK

Life cycle phases: Engineering and production stages, inception, Elaboration, construction, transition phases. Artifacts of the process: The artifact sets, Management artifacts, Engineering artifacts, programmatic artifacts Model based software architectures: A Management perspective. Model based software architectures: Technical perspective Work Flows of the process: Software process workflows Iteration workflows Checkpoints of the process: Major milestones, Minor Milestones, Periodic status assessment.

UNIT IV: PROJECT ORGANIZATION AND PLANNING

Work breakdown structures Planning guidelines. The cost and schedule estimating process The iteration planning process Pragmatic planning Line-of-Business organizations Project organizations, Evolution of organizations Process automation - Automation building Blocks The project environment.

UNIT V: PROJECT CONTROL AND PROCESS INSTRUMENTATION

The Seven-Core metrics: Management indicators The Seven-Core metrics: Quality indicators Life-Cycle expectations, Pragmatic software metrics, Metrics automation Modern project profiles Next generation software economics Modern process transitions.

CSE 424	Deep Learning	TE	3	0	0	3

UNIT I: INTRODUCTION

Overview of machine learning, linear classifiers, loss functions.

Introduction to Tensor Flow: Computational Graph, Key highlights, creating a Graph, Regression example, Gradient Descent, Tensor Board, Modularity, Sharing Variables, Keras.

UNIT II: Activation Functions

Sigmoid, ReLU, Hyperbolic Fns, Softmax Perceptrons: What is a Perceptron, XOR Gate.

Artificial Neural Networks: Introduction, Perceptron Training Rule, Gradient Descent Rule, vanishing gradient problem and solution.

UNIT-III: Convolutional Neural Networks

Introduction to CNNs, Kernel filter, Principles behind CNNs, Multiple Filters, problem, and solution of under fitting and over fitting.

UNIT IV: Recurrent Neural Networks

Introduction to RNNs, Unfolded RNNs, Seq2Seq RNNs, LSTM, GRU, Encoder Decoder architectures.

UNIT V: Deep Learning applications

Image segmentation, Self-Driving Cars, News Aggregation and Fraud News Detection Natural Language Processing, Virtual Assistants, Entertainment, Visual Recognition Fraud Detection, Healthcare.

UNIT I

Overview of the DBMS Introduction to DBMS implementation using Megatron 2000 database system
Data storage using main memory and hard disks Disk failures Recovery from disk crashes
Representing data elements: Record, Representing block and record address Variable length data and records
Record modifications.

UNIT II

Index structures: Indexes on sequential files Secondary indexes B-Trees Hash tables Multidimensional indexes: Hash and tree like structures for multidimensional data Bitmap indexes.

UNIT III

Query execution: Algebra for queries Introduction to Physical-Query-Plan Operators One-Pass Algorithms for Database Operations Nested-Loop Joins Two-Pass Algorithms Based on Sorting Two-Pass Algorithms Based on Hashing Index-Based Algorithms Buffer Management Algorithms Using More Than Two Passes Parallel Algorithms for Relational Operations.

UNIT IV

The query compiler: Parsing Algebraic Laws for Improving Query Plans from Parse Trees to Logical Query Plans Estimating the Cost of Operations Introduction to Cost-Based Plan Selection Choosing an Order for Joins Completing the Physical-Query-Plan Selection.

UNIT V

Concurrency control: Conflict-Serializability View serializability Enforcing Serializability by Locks Locking Systems with Several Lock Modes. An Architecture for a Locking Scheduler Concurrency control by timestamps and validation Transactions that Read Uncommitted Data Coping with system failures: Undo/Redo logging Protecting media failures

COURSE CODE	COURSE NAME	CORE/ ELECTIVE	CREDITS			
			L	T	P	C
CSE 327	Social Network Analysis	E	3	0	0	3

Unit – 1: Fundamentals of Network Science

Introduction

Networks in the real world: Social networks, Information networks, Technological networks, Biological networks

The large-scale structure of networks: Components, Shortest paths and small-world effect, Degree distributions, Power laws and scale-free networks, Six degrees of separation, Random graphs models of network formation.

Mathematics of networks: Networks and their representation, Types of networks: Weighted, directed and hypergraphs, The adjacency, Laplacian, and incidence matrices, Degree, paths, components, independent paths, connectivity, and cut sets.

UNIT -II: Centrality measures

Degree centrality, Closeness centrality, Homophily, Transitivity and Preferential attachment, Clustering coefficient and Assortative mixing, Eigenvector centrality, Katz centrality, Betweenness centrality, Page rank, Hubs and Authorities

UNIT – III: Community Detection in Social Networks

Detecting communities in social networks, Definition of community, Applications of community detection.

Algorithms for community detection: The Kernighan-Lin Algorithm, Agglomerative/Divisive Algorithms, Markov Clustering, Multi-level Graph Partitioning, Spectral Algorithms, Modularity Maximization, Other Approaches, Evaluating communities

UNIT- III: Predictive Analytics in Social Networks

Link prediction problem, Link prediction measures, Feature based Link Prediction, Evaluation Node classification problem

Node classification: Problem definition and applications; Iterative classification methods; Label propagation method; Graph regularization method; Evaluation

Motif analysis: Definition of network motifs; Triangle counting and enumeration algorithms; Applications of network motifs

UNIT V: Current Research in Social Networks

Social Influence Analysis, Influence propagation models, privacy in social networks, integrating sensors and social networks, multimedia information networks in social media and social tagging and applications.

COURSE CODE	COURSE NAME	CORE/ ELECTIVE	CREDITS			
			L	T	P	C
CSE 328	Recommender Systems	E	3	0	0	3

UNIT 1: Introduction

Introduction to Recommender Systems, Applications of Recommender Systems, Goals of Recommender Systems, Basic Models of Recommender Systems, Domain-Specific Challenges in Recommender Systems.

UNIT 2: Neighborhood-Based Recommender Systems

Introduction, Key Properties of Ratings Matrices, Predicting Ratings with Neighborhood-Based Methods: User-Based Neighborhood Models, Item-Based Neighborhood Models, Strengths and Weaknesses of Neighborhood-Based Methods, Dimensionality Reduction and Neighborhood Methods, A Regression Modelling View of Neighborhood Methods, Graph Models for Neighborhood-Based Methods

UNIT 3: Model-Based Collaborative Filtering

Latent Factor Models: Geometric Intuition for Latent Factor Models, Low-Rank Intuition for Latent Factor Models, Basic Matrix Factorization Principles, Unconstrained Matrix Factorization, Singular Value Decomposition, Non-negative Matrix Factorization, Understanding the Matrix Factorization Family

UNIT 4: Content-based Recommender Systems

Basic Components of Content-Based Systems, Feature Extraction: Example of Product Recommendation, Web Page Recommendation, Music Recommendation, Feature Representation and Cleaning, Learning User Profiles and Filtering, Hybrid recommender systems, Social Recommender Systems, Search Engine recommendation.

UNIT 5: Evaluating Recommender Systems

General goals of evaluation design: accuracy, coverage, confidence and trust, novelty, serendipity, diversity and scalability, Design Issues in Offline Recommender Evaluation, Accuracy Metrics: RMSE, MAE, Evaluating Ranking via Correlation, Evaluating Ranking via Utility, Evaluating Ranking via Receiver Operating Characteristic, Limitations of Evaluation Measures.

Course Code	Course Name	Course Category	Credits			
			L	T	P	C
CSE 329	Computational and Complexity Theory	E	3	0	0	3

UNIT I: CONTEXT FREE GRAMMARS

Ambiguity in context free grammars. Minimisation of Context Free Grammars. Chomsky normal form, Greiback normal form, Pumping Lemma for Context Free Languages. Enumeration of properties of CFL (proofs omitted). Push Down Automata: Push down automata, definition, model, acceptance of CFL, Acceptance by final state and acceptance by empty state and its equivalence. Equivalence of CFL and PDA, interconversion. (Proofs not required). Introduction to DCFL and DPDA

UNIT II: TURING MACHINE

Turing Machine, definition, model, design of TM, Computable functions, recursively enumerable languages. Church's hypothesis, counter machine, types of Turing machines (proofs not required). Universal Turing Machine, linear bounded automata and context sensitive language. Church-Turing Thesis Computational models: Lambda calculus, Turing machine

UNIT III: COMPUTABILITY THEORY

Decidability Reducibility. The PCP problem & Mapping reducibility The Recursion Theorem Definition of Information. Chomsky hierarchy of languages, decidability of, problems, undecidability of posts. Correspondence problem, Turing reducibility,

UNIT IV: TIME COMPLEXITY

Measuring Complexity, Big-O and small-o notation, Analyzing algorithms. Complexity relationships among computational models The Class-P, Examples The Class-NP, Examples The P versus NP question NP-completeness The Cook-Levin Theorem Additional NP-completeness Problems.

UNIT V: SPACE COMPLEXITY

Space complexity. Savitch's Theorem and NL. NL-completeness and log-space reductions. From P-completeness to PSPACE-completeness. The Classes L and NL NL completeness, NL equals coNL. Hierarchy Theorems Relativization Circuit Complexity.

TEXTBOOKS

1. Introduction to the Theory of Computation - Michael Sipser (Primary Textbook)
2. Computational Complexity - Arora Barak (Reference)
3. "Introduction to Automata Theory Languages and Computation". Hopcroft H.E. and Ullman J. D. Pearson Education
