

CSE Syllabus For General Aptitude	
Topics	Sub-topics
Verbal Aptitude	<ul style="list-style-type: none"> • English grammar • Vocabularies • Reading and comprehension • Narrative sequencing
Quantitative Aptitude	<ul style="list-style-type: none"> • Data interpretation • 2 & 3-dimensional plots • Maps & tables • Numerical computation & estimation that includes ratios, percentages, powers, exponents & logarithms • Permutations & combinations • Mensuration & geometry • Elementary statistics & probability
Analytical Aptitude	<ul style="list-style-type: none"> • Logic: Deduction & induction Analogy • Numerical relations & reasoning
Spatial Aptitude	<ul style="list-style-type: none"> • Transformation of shapes like translation, mirroring , rotation & scaling • Assembling & grouping • Paper folding, cutting, and patterns (2 & 3 dimensions)

CSE Syllabus For Core Subjects	
Subject	Syllabus
Digital Logic	<ul style="list-style-type: none"> • Boolean algebra • Combinational and sequential circuits • Minimization • Number representations and computer arithmetic (fixed and floating-point)
Computer Organization and Architecture	<ul style="list-style-type: none"> • machine instructions and addressing modes • ALU, data- path and control unit • Instruction pipelining, pipeline hazards • Memory hierarchy: cache, main memory and secondary storage • I/O interface (interrupt and DMA mode)

Programming and Data Structures	<ul style="list-style-type: none"> • Programming in C • Recursion • Arrays • Stacks • Queues • Linked lists • Trees • Binary search trees • Binary heaps • Graphs
Algorithms	<ul style="list-style-type: none"> • Searching • Sorting • Hashing • Asymptotic worst-case time and space complexity • Algorithm design techniques: greedy, dynamic programming and divide- and- conquer • Graph traversals • Minimum spanning trees • Shortest paths
Theory of Computation	<ul style="list-style-type: none"> • Regular expressions and finite automata • Context-free grammars and push-down automata • Regular and context-free languages • Pumping lemma • Turing machines and undecidability.
Compiler Design	<ul style="list-style-type: none"> • Lexical analysis • Parsing • Syntax-directed translation • Runtime environments • Intermediate code generation • Local optimization • Data flow analyses: constant propagation, liveness analysis, common subexpression elimination
Operating System	<ul style="list-style-type: none"> • System calls, processes, threads • Inter- process communication • Concurrency and synchronization • Deadlock • CPU and I/O scheduling • Memory management and virtual memory • File systems
Databases	<ul style="list-style-type: none"> • ER- model • Relational model: relational algebra, tuple calculus, SQL. • Integrity constraints, normal forms. • File organization, indexing (e.g., B and B+ trees). • Transactions and concurrency control

<p>Computer Networks</p>	<ul style="list-style-type: none">• Concept of layering: OSI and TCP/IP Protocol Stacks• Basics of packet, circuit and virtual circuit-switching• Data link layer: framing, error detection, Medium Access Control, Ethernet bridging• Routing protocols: shortest path, flooding, distance vector and link-state routing• Fragmentation and IP addressing• IPv4, CIDR notation,• Basics of IP support protocols (ARP, DHCP, ICMP), Network Address Translation (NAT)• Transport layer: flow control and congestion control, UDP, TCP, sockets• Application layer protocols: DNS, SMTP, HTTP, FTP, Email
--------------------------	--
