# **Department of Computer Science Engineering**

# B.Sc. (Hons.) Computer Science Curriculum and Syllabus (Applicable to the students admitted from AY 2023-24)

School of Engineering and Sciences SRM University-AP, Andhra Pradesh

#### **Vision Statement**

To create technology innovators and leaders who can shape the future of society through technical, research, and entrepreneurial skills with a strong emphasis on interdisciplinary learning and collaborations.

#### **Mission Statements**

- Use effective teaching and learning pedagogies to enhance technical competency with a focus on computer science and engineering fundamentals.
- Encourage interdisciplinary education and research by promoting the exchange of ideas among a varied community of researchers, educators, and learners.
- Develop a substantial body of knowledge for industrial applications.
- Create an outstanding interdisciplinary research atmosphere.
- Instil students with effective managerial skills, fostering their development into competitive and visionary entrepreneurs.

#### **Program Educational Objectives (PEO)**

**PEO 1:** To enhance student's foundational knowledge and computer science concepts by improving analytical and computational approaches by understanding societal and technological challenges.

**PEO 2:** To promote a strongly interdisciplinary approach that integrates the study of multiple academic disciplines which can develop skills required to build careers in various emerging fields of Science.

**PEO 3:** To engage in the understanding of emergent computing technologies to identify and communicate innovative solution for significant problems across a broad range of application areas.

Mission of the Department to Program Educational Objectives (PEO) Mapping

	PEO 1	PEO 2	PEO 3
<b>Mission Statement 1</b>	3	3	2
<b>Mission Statement 2</b>	2	2	1
<b>Mission Statement 3</b>	1	3	1
<b>Mission Statement 4</b>	2	2	2
Mission Statement 5	3	3	3

#### **Program Specific Outcomes (PSO)**

**PSO 1:** Apply their knowledge of computing system, algorithmic principles and mathematical foundations to develop innovative solutions to current and emerging computing problems.

**PSO 2:** Design, implement, and evaluate a computer-based system to meet realistic requirements.

**PSO 3:** Adapt new technologies, tools and methodologies to remain at the leading edge of computer science developments and practice in the profession and in the academic field.

### SRM University – AP, Andhra Pradesh

Neerukonda, Mangalagiri Mandal Guntur District, Mangalagiri, Andhra Pradesh 522240

### The Art of Listening, Speaking and Reading Skills

Course Code	AEC 101	Course Category	L-T/D-P/Pr- C	1	0	1 2
Pre-Requisite Course(s)		Co-Requisite Course(s)	Progressive Course(s)			
Course Offering Literature and Languages		Professional / Licensing Standards				

#### **Course Objectives**

- 1. To develop and enhance students' proficiency in listening, speaking, and reading skills,
- 2. To help the participants understand the purpose and differentiate various types of audience.
- 3. To prepare the students to produce Language in various contexts be it Oral or Written form.

#### **Course Outcomes / Course Learning Outcomes (CLOs)**

	At the end of the course the learner will be able to	Bloom's Level	Expected Proficiency Percentage	
Outcome 1	Develop advanced listening skills, to comprehend and respond to a wide range of spoken language varieties, accents, and contexts with increased accuracy and fluency.	2	90%	90%
Outcome 2	Articulate ideas and thoughts clearly and effectively in both informal and formal settings, utilizing appropriate vocabulary, grammar, and speech delivery techniques.	3	90%	90%
Outcome 3	Enhance their reading comprehension and critical analysis abilities, enabling them to understand complex texts, extract key information, and critically evaluate the content within various genres and subjects.	3	70%	70%
Outcome 4	Engage in effective and meaningful conversations, demonstrating improved listening skills, oral communication abilities, and comprehension of written texts, thereby enhancing their overall language proficiency and communication competence	2	60%	60%

## Course Articulation Matrix (CLO) to (PLO)

		Program Learning Outcomes (PLO)													
CLOs	Scientific and Disciplinary Knowledge	Analytical Reasoning and Problem Solving	Critical and Reflective Thinking	Scientific Reasoning and Design Thinking	Research Related Skills	Modern Tools and ICT Usage	Environment and Sustainability	Moral, Multicultural and Ethical Awareness	Individual and Teamwork Skills	Communication Skills	Leadership Readiness Skills	Self-Directed and Life Long Learning	PSO 1	PSO 2	PSO 3
Outcome 1					1	1		3	2	3		3			
Outcome 2					1	1			1	3		3			
Outcome 3					1	1			1	3		2			
Outcome 4					1	1			1	3	3	3			
Course Average					1	1		3	1	3	3	3			

### **Course Unitization Plan**

Unit No.	Unit Name	Require d Contact Hours	CLOs Addressed	References Used
Unit 1	Augmenting Listening skills	12		
	Course introduction and objectives: Importance of LSRW	2	1-4	
	Listening - Barriers to active listening and steps to Overcome	3	1-4	
	Listening Comprehension How to take/ make notes (different ways)	3	1-4	
	Listening practice: Identifying main ideas, supporting details, and inferences and summarizing key points	2	1-4	
	Practice sessions: memory games, Chinese whisper	2	1-4	
Unit 2	Developing Speaking Skills	12		
	Strategies for good speech, Basics of grammatically correct speech	3	1-4	
	Basics of phonetics and intonation	3	1-4	
	Oral presentations: do's and don'ts	2	1-4	

	Speaking Practice: Just a minute/ Impromptu, Story-telling/ Story starters Group discussions,	4	1-4	
Unit 3	Communication and Persuasion	12		
	Verbal Communication and Nonverbal Communication	3	1-4	
	The art of persuasive communication (Ethos, pathos, Logos)	3	1-4	
	Practice sessions (Convince the other Role plays, Self introduction, Pitching, extempore, public speaking)	6	1-4	
Unit 4	Reading	9		
	Reading strategies (Skimming and scanning, extensive and intensive)	2	1-4	
	Reading and analyzing various texts, including articles, essays, and academic papers	3	1-4	
	Reading Comprehension Practice	4	1-4	
Unit 5	Integrated Skills and Real-World Application	15		
	Engaging in discussions and debates on current issues	4	1-4	
	Real-world application of language skills (e.g., job interviews, social interactions)	5	1-4	
	Pitching Presentation	6	1-4	
	<b>Total Contact Hours</b>		60

Board of Studies Approval Date		Academic Council Approval Date			

#### **Course Objectives / Course Learning Rationales (CLRs)**

**Objective 1:** To categorize, apply and use thought process to distinguish between concepts of quantitative methods.

Objective 2: To prepare and explain the fundamentals related to various possibilities.

**Objective 3:** To critically evaluate numerous possibilities related to puzzles.

Objective 4: Explore and apply key concepts in logical thinking to business problems.

**Course Outcomes / Course Learning Outcomes (CLOs)** 

	At the end of the course the learner will be able to	Bloom's Level	Expected Proficiency Percentage	Expected Attainment Percentage
Outcome 1	Use logical thinking and analytical abilities to solve quantitative aptitude questions from company specific and other competitive tests.	1	70%	60%
Outcome 2	Solve questions related to Time and Distance and Time and work from company specific and other competitive tests.	3	80%	70%
Outcome 3	Understand and solve puzzle questions from specific and other competitive tests	1	70%	60%
Outcome 4	Make sound arguments based on mathematical reasoning and careful analysis of data.	1	90%	80%

### **Course Unitization Plan - Theory**

Unit No.	Unit Name	Require d Contact Hours	CLOs Addresse d	Referenc es Used
Unit 1	Quantum Computing and Quantum Communications			

1.1	Quantum Computer and early ideas, classical and quantum computing approaches, superposition, entanglement, and interference in quantum computing.	1	1	1
1.2	QUBITS and their types; representation of data in quantum mechanics.	1	1	1
1.3	Shor's Algorithm, Grover's search algorithm.	1	1	1
1.4	Quantum programming languages; Obstacles in building quantum computers.	1	1	1
1.5	Applications of quantum computers; Opportunities in the field of quantum computing.	1	1	1
1.6	Introduction of quantum communication pillers, quantum network, Heisenberg's uncertainty principle and QKD.	1	1	1
1.7	Challenges in QKD, National Quantum Mission, Future perspectives.	1	1	1
Unit 2	Unit 2: Nanotechnology and Green Hydrogen			
2.1	Introduction to the nanometer scale. history of nanomaterials	1	2	2
2.2	Synthesis of nanomaterials: Bottom-up and Top-down approach	1	2	2
2.3	tools & techniques to characterize nanomaterials. Applications of nanomaterials.	1	2	2
2.4	Green Technology: Definition, types of Green Technologies, Green Hydrogen production.	1	2	2
2.5	Challenges involved in the storage of Green Hydrogen produced from PEM based electrolysis.	1	2	2
2.6	Applications of Green Hydrogen.	1	2	2
Unit 3	3D Printing and Applications			
3.1	Introduction to 3D printing and additive manufacturing	1	3	3
3.2	Capabilities of 3D printing	1	3	3
3.3	Applications of 3D printing	1	3	3
3.4	Classification based on ASTM	1	3	3

Unit 4	UAVs, Drones and Applications			
4.1	Introduction to the evolution of drones	1	4	4
4.2	Classification of drones	1	4	4
4.3	Basic components of drones	1	4	4
4.4	Principles of flight	1	4	4
4.5	Applications of drones	1	4	4
4.6	Drones rules in India, Challenges and future scope.	1	4	4
Unit 5	Introduction to Artificial Intelligence and Machine Learning			
5.1	Introduction to Artificial Intelligence, Machine Learning and Deep learning	1	5	5
5.2	Supervised (Classification and regression) learning	1	5	5
5.3	Unsupervised (Clustering) learning	1	5	5
5.4	Reinforcement learning (Decision making)	1	5	5
5.5	Features and Applications of AI and ML	1	5	5
5.6	Threats of AI: Lack of Regulation.	1	5	5

#### FIC 111 Chemical Basis of Life

Course Code	FIC 111	Course Category	Core Course (CC)	L-T-P/Pr-C	3	0	0	3
Pre-Requisite Course(s)		Co-Requisite Course(s)		Progressive Course(s)				
Course Offering Department	Biological Sciences/ Chemistrty	Professional / Licensing Standards			1			

#### **Course Objectives / Course Learning Rationales (CLRs)**

**Objective 1:** To learn the origin and composition of complex biomolecules and primitive cells, focusing on the chemical basis of life with an emphasis on the importance of carbon

**Objective 2:** To develop a comprehensive understanding of chemical bonding, including the definition and importance of bonding

**Objective 3:** To explore the cellular structures of prokaryotes and eukaryotes, the life cycles of viruses, bacterial gene transfer mechanisms, cell cycle processes, and the organization of DNA with insights into the central dogma.

**Objective 4:** To gain foundational knowledge in chemical thermodynamics, covering the basic principles of energy, work, and heat, and understanding the first and second laws of thermodynamics, entropy, spontaneity, reversibility, disorder, and the calculation of Gibbs free energy.

**Objective 5:** To understand enzymes and their equilibrium constants  $(K_{eq})$ , energy harvesting reactions such as chemotrophic and phototrophic processes.

#### **Course Outcomes / Course Learning Outcomes (CLOs)**

	At the end of the course, the learner will be able to	Bloom's Level	Expected Proficienc y Percentag e	Expected Attainment Percentage
Outcome 1	List and describe biomolecules and cellular structures	2	70%	65%

Outcome 2	Compare different chemical bonding concepts	2	70%	65%
Outcome 3	Analyze and explain cellular processes and structures	4	50%	50%
Outcome 4	Apply thermodynamic principles to chemical systems	3	70%	65%
Outcome 5	Interpret and evaluate energy harvesting reactions in life	6	50%	50%

### **Course Unitization Plan**

Unit No.	Unit Name	Require d Contact Hours	CLOs Addresse d	Referenc es Used
Unit 1	Life: Origin, composition, and chemistry	9		
	Origin of complex biomolecules and primitive cells	1.5	1	1, 2, 3
	Chemical basis of life- Importance of carbon & water	1.5	1	1, 2, 3
	Synthesis by polymerization; importance of self-assembly; Selectively permeable membranes	1.5	1	1, 2, 3
	Concepts of acids, bases, and buffers	1.5	1	1, 2, 3
	Concepts and numerical problems on pH, Ka, Kb, Kw	1.5		
	Henderson-Hasselbalch equation	1.5	1	1, 2, 3
Unit 2	Chemical bonding	9		
	Definition and importance; Valence electrons and their role in bond formation	1.5	2	1, 2, 3
	Introduction of Lewis dot structure; Covalent bonds- single, double, and triple bonds	1.5		
	Electronegativity and polarity in covalent bonds; Ionic bonds- transfer of electrons, cations and anions	1.5	2	1, 2, 3
	An elementary idea of lattice structure	1.5		
	Weak intermolecular associations. Coordinate bonds.	1.5	2	1, 2, 3
	Comparison of bond strengths of different bonds with special relation to biological systems.	1.5	2	1, 2, 3
Unit 3	Life forms and processes	9		
	Prokaryotes and eukaryotes (cell structures and organelles); Virus- lysogenic and lytic cycles	1.5	3	1, 2, 3
	Bacteria- typical bacterial cells, bacterial gene transfer- conjugation, transformation, and transduction	1.5	3	1, 2, 3

	Antibiotic resistance- an emerging threat; Microbiome; Cell cycle- mitosis and meiosis	1.5	3	1, 2, 3
	Structure of DNA and organization of chromosomes	1.5	3	1, 2, 3
	Central dogma- replication in prokaryotes	1.5	3	1, 2, 3
	Central dogma- transcription, and translation in prokaryotes	1.5	3	1, 2, 3
Unit 4	Chemical thermodynamics	9		
	Introduction to energy, work and heat in chemical systems; Differentiating between open, closed, and isolated systems	1.5	4	
	First law of thermodynamics: conservation of energy, calculation of internal energy changes, concept of enthalpy	1.5	4	1, 2, 3
	Second law of thermodynamics: definition, concept of entropy, calculation and interpretation of entropy changes	1.5	4	
	Spontaneity, reversibility, and disorder	1.5	4	1, 2, 3
	Gibbs free energy: calculation, predicting feasibility of reaction	1.5	4	
	Concept of chemical equilibrium	1.5	4	1, 2, 3
Unit 5	Energy harvesting reactions by life forms	9		
	Biological reactions: Enzymes	1.5	5	1, 2, 3
	Equilibrium constants (K <sub>eq</sub> ) of enzymes	1.5	5	
	Metabolism: Glycolysis	1.5	5	
	Anaerobic respiration	1.5	5	
	Aerobic cellular respiration	1.5	5	1, 2, 3
	Fate of food in cellular energy cycle.	1.5	5	1, 2, 3
	Total Contact Hours		45	<u> </u>

UNIT II	INTRODUCTION TO PROBLEM SOLVING	10		
	Problem solving: Algorithm / Pseudo code, flowchart, program development steps	2	1	1,2
	Computer languages: Machine, symbolic and high-level langua Level languages	2	1	1,2
	Creating and Running Programs: Writing, editing (any ling (gcc)	1	1	1,2
	linking, and executing in Linux environment	1	1	1,2
	Lab Experiment 1: GCC Compiler using Linux, various Linux commands used to edit, compile and executing	2	1	1,2
	Lab Experiment 2: a) Calculation of the area of the triangle.			
	b) Swap two numbers without using a temporary variable.	2	1	1,2
	c) Find the roots of a quadratic equation			
UNIT III	C PROGRAMMING BASICS	15		
	Structure of a C program, identifiers Basic data types and sizes. Constants, Variables	1	1	1,2
	Sizesi Constants, variables			
	Arithmetic, relational and logical operators, increment and decrement operator's	1	1	1,2
	Arithmetic, relational and logical operators, increment and	1	1	1,2
	Arithmetic, relational and logical operators, increment and decrement operator's  Conditional operator, assignment operator, expressions Type			
	Arithmetic, relational and logical operators, increment and decrement operator's  Conditional operator, assignment operator, expressions Type conversi Type Conversions,  Conditional Expressions Precedence and order of evaluation,	1	1	1,2
	Arithmetic, relational and logical operators, increment and decrement operator's  Conditional operator, assignment operator, expressions Type conversi Type Conversions,  Conditional Expressions Precedence and order of evaluation, Sample Programs.  SELECTION & DECISION MAKING: if-else, null else, nested if, examples, multi-way selection: switch, else-if,	1	1	1,2

	<ul><li>Lab Experiment 3: a) Find the sum of individual digits of a positive integer and find the reverse of the given number.</li><li>b) Generate the first n terms of Fibonacci sequence.</li><li>c) Generate all the prime numbers between 1 and n, where n is a value supplied by the user.</li></ul>	2	1, 2	1,2
	<ul><li>Lab Experiment 4: a) Print the multiplication table of a given number n up to a given value, where n is entered by the user.</li><li>b) Decimal number to binary conversion.</li><li>c) Check whether a given number is the Armstrong number or</li></ul>	2	1, 2	1,2
	*       *         ***       *         ****       *         *****       *         ******       *         *******       *         *******       *         I       II	2	1, 2	1,2
UNIT IV	FUNCTIONS AND ARRAYS	19		
	User defined functions, standard library functions	1	2,3	1,2
	Passing 1-D arrays, 2-D arrays to functions.	1	2,3	1,2
	Recursive functions - Recursive solutions for Fibonacci series, towers of Hanoi.	2	2,3	1,2
	C Pre-processor and header files	1	2,3	1,2
	Concepts, declaration, definition, storing and accessing elements	1	2,3	1,2

	one dimensional, two dimensional and multidimensional arrays	2	2,3	1,2
	array operations and examples, Character arrays and string manipulations	2	2,3	1,2
	Lab Experiment 6:  a) (nCr) and (nPr) of the given numbers b) 1+x+x <sup>2</sup> \2+x <sup>3</sup> \3!+x <sup>4</sup> \4!+X <sup>n</sup> \n!	2	2,3	1,2
	<ul><li>Lab Experiment 7: a) Interchange the largest and smallest numbers in the array.</li><li>b) Searching an element in an array</li><li>c) Sorting array elements.</li></ul>	2	2,3	1,2
	Lab Experiment 8:  a. Transpose of a matrix. b. Addition and multiplication of 2 matrices.	2	2,3	1,2
	<ul> <li>a. Function to find both the largest and smallest number of an array of integers.</li> <li>b. Liner search.</li> <li>c. Replace a character of string either from beginning or ending or at a specified location.</li> </ul>	2	2,3	1,2
	Lab Experiment 10:  Pre-processor directives  a. If Def b. Undef c. Pragma	1	2,3	1,2
UNIT V	POINTERS	14		
	Concepts, initialization of pointer variables	1	3,4	1,2
	pointers as function arguments, passing by address, dangling memory, address arithmetic	2	3,4	1,2
	character pointers and functions, pointers to pointers	2	3,4	1,2
	pointers and multi-dimensional arrays, dynamic memory management functions	2	3,4	1,2

command line arguments	1	3,4	1,2
a. Illustrate call by value and call by reference. b. Reverse a string using pointers c. Compare two arrays using pointers	2	3, 4	1,2,3
Lab Experiment 11:  a. Array of Int and Char Pointers. b. Array with Malloc(), calloc() and realloc().	2	3, 4	1,2,3
a. To find the factorial of a given integer. b. To find the GCD (greatest common divisor) of two given integers. c. Towers of Hanoi	2	3, 4	1,2,3
a. File copy b. Word, line and character count in a file.	2	5	2, 3, 4
Total Hours		68

Course Code	AEC 107	Course Category	Ability Enhancement Course (AEC)	L-T-P-C	1	0	1	2
Pre-Requisite Course(s)		Co-Requisite Course(s)		Progressive Course(s)				
Course Offering Department	Literature and Languages	Professional / Licensing Standards			I			

## **Course Objectives**

- **Objective 1** Demonstrate proficiency in written communication, including the ability to compose clear, grammatically structured and organized written documents, as well as deliver well-structured and engaging presentations.
- **Objective 2** Critically analyse and synthesize information from various sources, conduct research effectively, and use evidence to support their arguments in both written assignments and oral presentations, that will enhance their critical thinking and research skills
- **Objective 3** Through a combination of theoretical knowledge and practical exercises, the course aims to enhance students' ability to express ideas clearly, engage an audience, and deliver persuasive and impactful messages in both written and spoken formats.

**Course Outcomes / Course Learning Outcomes (CLOs)** 

	At the end of the course, the learner will be able to	Bloom's Level	Expected Proficiency Percentage	Expected Attainment Percentage
Outcome 1	Develop coherent and well-structured written communication by generating clear and concise written content with logical organization, appropriate grammar	2	90%	90%
Outcome 2	Recognize and analyze the expectations of specific target audiences by adjusting tone, language and style to suit the intended purpose of the audience of written communication and tailoring written content to various formats such as reports, essays, emails, and professional correspondence.	3	90%	90%
Outcome 3	Demonstrate confident Public Speaking with the ability to deliver structured, well-organized, and persuasive presentations by employing visual and interactive aids, storytelling techniques.	3	70%	70%
Outcome 4	Develop strong critical thinking and research skills, enabling them to evaluate information critically, synthesize sources effectively, and provide well-reasoned arguments in their written work and presentations.	2	60%	60%

Pre-Requisite Course(s)	NIL	Co-Requisite Course(s)	NIL	Progressive Course(s)		N	IL	
Course	Psychology	Professional /		NIL				
Offering		Licensing						
Department		Standards						

## **Course Objectives / Course Learning Rationales (CLRs)**

Objective 1: To understand the fundamental psychological processes in everyday living.

**Objective 2:** To apply knowledge of psychology in improving self and others.

Objective 3: To apply knowledge of psychology in enhancing quality of life.

	At the end of the course, the learner will be able to	Bloom's Level	Expected Proficienc y Percentag e	Expected Attainment Percentage
Outcome 1	Explain fundamental psychological processes in everyday living	2	80%	70%
Outcome 2	Describe important theories in psychology in the areas of sensation, perception, personality and learning	2	75%	70%
Outcome 3	Illustrate personal, professional and social applications of psychology	4	75%	60%
Outcome 4	Interpret results from certain personality tests	5	70%	60%

# Course Articulation Matrix (CLO) to Program Learning Outcomes (PLO)

		Program Learning Outcomes (PLO)

## **Course Unitization Plan**

Unit No.	Unit Name	Required Contact	CLOs Addressed	Refere nces
		Hours		
Unit 1	Myths and Misconceptions in Psychology	12	1	1
	Definition, nature and goals of psychology	4		
	Common myths and misconceptions about psychology	4		
	Schools of psychology; Basic and applied areas of psychology	4		
Unit	The Role of Perception and Attitude towards	12	2, 3	2
2	Understanding the World			
	Perception: Understanding perception, Gestalt laws of organization, common illusions	3		
	Perceptual constancy - depth perception, size perception, perception of movement	3		
	Attitude formation	3		
	Attitude change	3		
Unit 3	Intelligence and Learning	12	2, 3	2
	Definitions and nature of intelligence	3		
	Emotional and social intelligence; Measuring IQ, EQ and SQ	3		
	Fundamentals of learning and its applications	3		
	Memory techniques	3		
Unit 4	Understanding the Self	12	2, 4	1

	Definition; Approaches to personality – trait and type	4		
	Psychoanalytical and humanistic theory, Tests of	4		
	personality – MBTI and NEO-PI			
	Identity; Self-concept, self-esteem and self-efficacy	4		
Unit 5	Stress, Coping and Quality of Life	12	2, 3	1
	Nature, sources of stress and its reactions	3		
	Factors influencing stress	3		
	Coping with and managing stress - cognitive and	3		
	behavioural techniques			
	Improving quality of life	3

#### **Course Objectives / Course Learning Rationales (CLRs)**

**Objective 1:** The objective is to equip the students with mathematical definitions, proofs, and applicable methods.

**Objective 2:** To enable the students to use mathematically correct terminology and notation.

**Objective 3:** Use foundational concepts in number theory and algorithms and developing problem-solving skills through the application of mathematical reasoning and induction principles.

**Objective 4:** Familiar about graphs and graph models, terminology, and special types is to understand the fundamental concepts and applications of graphs in various domains.

	At the end of the course the learner will be able to	Bloom's Level	Expected Proficiency Percentage	Expected Attainment Percentage
Outcome 1	Express an argument using predicates, quantifiers and logic connectives and determine if the argument is valid.	2	80%	80%
Outcome 2	Apply the rules of inferences and methods of proofs including direct and indirect proofs, proof by contradiction and mathematical induction.	3	70%	60%

Outcome 3	Describe set properties, set operations, set identities, and representing relationship between the sets.	2	80%	70%
Outcome 4	Discover whether a given function is one- one, onto and invertible.	4	70%	60%
Outcome 5	Define the concept of divisibility, congruence, greatest common divisor, prime numbers, and prime factorization of numbers.	1	80%	80%
Outcome 6	Apply counting principles to determine probabilities and solving problems using recurrence relations.	3	70%	60%
Outcome 7	Explain graphs, their representations and determine the Euler circuits, Hamilton circuits, Euler paths and Hamilton paths in a graph.	3	80%	80%

	form the user, performs the operation and then			
	prints the result.			
	2. Generate all the prime numbers between 1 and n,			
	where n is a value supplied by the user.			
2	Lab Experiment 2:	1	1	1
	1. Write a program to demonstrate the Inline			
	functions.			
	2. Programs to understand different function call			
	mechanism.			
	a. call by reference b. call by value			
3	Lab Experiment 3:	1	1,2	2
	1. Write a Program to design a class having static			
	member function Named showcount() which has			
	the property of displaying the number of objects			
	created of the class.			
	2. Write a Program using class to process Shopping			
	List for a Departmental Store. The list includes			
	details such as the Code No and Price of each item			
	and perform the operations like Adding, Deleting			

	Items to the list and Printing the Total value of a			
	Order.			
4	Lab Experiment 4:	1	1,2	2
	1. Write a Program which creates & uses array of			
	object of a class. ( for eg. implementing the list of			
	Managers of a Company having details such as			
	Name, Age, etc).			
	2. Write a Program to find Maximum out of Two			
	Numbers using friend function. Note: Here one			
	number is a member of one class and the other			
	number is member of some other class.			_
5	Lab Experiment 5:	1	1,2	2
	1. Write a Program to swap private data members			
	of classes Named as class_1, class_2 using friend			
	function.			
	2. Write a Program to design a class complex to			
	represent complex numbers. The complex class			
	should use an external function (use it as a friend			
	function) to add two complex numbers. The			
	function should return an object of type complex			
	representing the sum of two complex numbers.	1	1.0	2
6	Lab Experiment 6:	1	1,2	2
	1. Write a Program using copy constructor to copy			
	data of an object to another object.			
	2. Write a Program to allocate memory dynamically			
	for an object of a given class using class's constructor.			
7		1	2.2	2
/	Lab Experiment 7:  1. Write a program to design a class representing	1	2,3	2
	complex numbers and having the functionality of			
	performing addition & multiplication of two			
	complex numbers using operator overloading.			
	2. Write a Program to overload operators like *, <<,			
	>> using friend function. The following overloaded			
	operators should work for a class vector.			
8	Lab Experiment 8:	1	2,3	2
	1. Write a Program to design a class to represent a			
	matrix. The class should have the functionality to			
	insert and retrieve the elements of the matrix.			
	2.Write a program to overload new/delete operators			
	in a class.			
9	Lab Experiment 9:	1	2,3	2
	1. Write a Program to design a class to represent a			
	matrix. The class should have the functionality to			
	insert and retrieve the elements of the matrix.			

	2. Write a program for developing a matrix class which can handle integer matrices of different dimensions. Also overload the operator for addition, multiplication & comparison of matrices.			
10	Lab Experiment 10:  1. Write a Program illustrating how the constructors are implemented and the order in which they are called when the classes are inherited. Use three classes Named alpha, beta, gamma such that alpha, beta are base class and gamma is derived class inheriting alpha & beta.  2. Write a Program to design a student class representing student roll no. and a test class (derived class of student) representing the scores of the student in various subjects and sports class representing the score in sports. The sports and test class should be inherited by a result class having the functionality to add the scores and display the final result for a student.	1	2,3	2
11	Lab Experiment 11:  1. Write a program to maintain the records of person with details (Name and Age) and find the eldest among them. The program must use this pointer to return the result.  2. Write a Program to illustrate the use of pointers to objects which are related by inheritance.	1	2,3	2
12	Lab Experiment 12:  1. Write a program illustrating the use of virtual functions in class.  2. Write a program to design a class representing the information regarding digital library (books, tape: book & tape should be separate classes having the base class as media). The class should have the functionality for adding new item, issuing, deposit etc. the program should use the runtime polymorphism.	1	2,3	2
13	Lab Experiment 13:  1. Write a program to show conversion from string to int and vice-versa.  2. Write a program showing data conversion between objects of different classes.	1	2,3	2
14	Lab Experiment 14:  1. Write a program showing data conversion between objects of different classes and conversion routine should reside in destination class.	1	2,3	2

	2. Write a program to copy the contents of one file				
	to another.				
15	Lab Experiment 15:	1	2,3,4	2	
	1. Write a program to implement the exception				
	handling.				
	2. Write a program to maintain the elementary				
	database of employee using file concepts.

#### **Course Objectives:**

**Objective 1:** Develop a comprehensive set of skills and knowledge to solve complex systems of linear equations and utilizing matrix operations by introducing determinants, vector spaces, and their applications in real-world scenarios.

**Objective 2:** To gain proficiency in understanding and manipulating linear transformations, eigenvalues, and eigenvectors, enabling them to analyse and interpret diverse mathematical models.

**Objective 3:** To develop practical techniques for solving first and higher-order differential equations, employing methods like reduction of order and variation of parameters

to tackle real-world problems involving dynamic systems.

#### **Course Outcomes (COs)**

	At the end of the course, the learner will be able to	Bloom's Level	Expected Proficienc y Percentag e	Expected Attainme nt Percentag e
CO 1	Solve linear equations and perform matrix operations. Understand special matrix types, determinants, and vector spaces.	3	75%	80%
CO 2	Define and analyze linear transformations. Apply eigenvalue concepts and understand diagonalization.	1, 3	70%	65%

CO 3	Identify the existence, uniqueness, and classification of solutions. Solve various types of first-order differential equations, including separable and linear.	2	75%	70%
CO 4	Demonstrate homogeneous equations with constant coefficients and Euler-Cauchy equations with solution methods like undetermined coefficients and variation of parameters.	4	70%	65%
CO 5	Transform higher-order equations into systems, emphasizing critical points and stability. Address nonhomogeneous linear systems using methods like undetermined coefficients and variation of parameters.	4	70%	65%

### **Course Objectives:**

Objective 1: Identify key concepts associated with creative problem-solving and critical analysis.

**Objective 2:** Interpret and summarize various models and frameworks used in fostering creative and critical thinking skills.

**Objective 3:** Apply divergent thinking methods to generate innovative solutions to multifaceted problems.

**Objective 4:** Assess and compare the strengths and weaknesses of various critical thinking approaches in decision-making.

#### **Course Outcomes (COs)**

	At the end of the course the learner will be able to	Bloom's Level	Expected Proficienc y Percentag e	Expected Attainme nt Percentag e
Outcome 1	Define and describe fundamental concepts and theories related to creativity and critical thinking.	1	80%	80%
Outcome 2	Explain the significance of creativity and critical thinking in problem-solving and decision-making processes.	2	80%	60%
Outcome 3	Implement critical thinking strategies to analyse and evaluate information and arguments effectively.	3	80%	70%
Outcome 4	Analyse and assess the effectiveness of specific creative thinking methods in addressing real-world problems.	4	80%	70%

## **Course Unitization Plan - Lab**

Course	Chitization 1 Ian - Lab			
Exp No.	Experiment Name	Requir ed Contact Hours	CLOs Address ed	Referen ces Used
1	Install /configure java development kit (JDK), android studio and android SDK. Configure android development tools (ADT) plug-in and create android virtual device.	2	2	2
2	Declare two classes Student and Teacher. The classes will have the data members and constructors as per your convenience. Write a JAVA program, (i) where the Teacher will enter the marks of the all the students in the database. (ii) Once the marks are entered, the student can view the marks.	2	1	8
3	Define a package named gradepack. The gradepack consists of a class named operations. The operations class consists of the methods to compute the average, minimum, maximum, median and standard deviation. Create a class named GradesStatistics, which reads in n grades (of int between 0 and 100, inclusive) and displays the average, minimum, maximum, median and standard deviation by importing the gradepack package. (Pass the grades information to the methods in the operations class.) Display the floating-point values upto 2 decimal places.	2	1	8
4	Create three classes named Student, Teacher, Parent. Student and Teacher class inherits Thread class and	2	1	8

	Parent class implements Runnable interface. These three classes have run methods with statements. The task of the teacher class of the first assignment has to be synchronized. Similarly, the other two classes should have run methods with few valid statements			
5	under synchronized.  a. Develop a program to implement linear layout and			
	<ul><li>absolute layout.</li><li>b. Develop a program to implement frame layout,</li><li>table layout and relative layout.</li></ul>	2	3	2
6	Develop a program to implement Text View and Edit			
	Text. b Develop a program to implement Auto Complete Text View. c Develop a program to implement Button, Image	2	3	2
7	Button and Toggle Button.			
7	Develop a program to implement login window using above UI controls.  b. Develop a program to implement Checkbox, Radio Button and Radio Group, c. Progress Bar. d. Develop a program to implement List View, Grid View, Image View and Scroll View.	2	3	2
8	Develop a program to implement Date and Time Picker.  b. Develop a program to implement Custom Toast Alert.	2	3	2
9	Develop a program to create an activity. b: Develop a program to implement new activity using explicit intent and implicit intent. c: Develop a program to implement content provider d: Develop a program to implement service.	2	3	2
10	Develop a program to implement broadcast receiver. b: Develop a program to implement sensors. c: Develop a program to build Camera.	2	3	1
11	Develop a program for providing Bluetooth connectivity b: Develop a program for animation c: Perform Async task using SQLite.	2	3, 4	2
12	Create sample application with login module. (Check username and password) On successful login, Change text view "Login Successful" And on login fail, alert user using Toast "Login fail" b: Create login application where you will have to validate username and password till	2	3, 4	2

	c: the username and password is not validated, login			
	button should remain disabled.			
13	Develop a program to: i) Send SMS ii) Receive SMS.			
	b: Develop a program to send and receive e-mail	2	3, 4	2
	c: Deploy map based application.			
Total Contact Hours 26

#### **Course Objectives / Course Learning Rationales (CLRs)**

- **Objective 1:** Understand the advantages of DBMS over traditional file systems and characteristics of DBMS.
- **Objective 2:** Design ER-models to represent data of the organization.
- Objective 3: Design relational databases and execute various queries on the database using SQL.
- **Objective 4:** Gain knowledge of various anomalies that can occur in the database and overcome those with the help of normal forms.
- **Objective 5:** comprehend the purpose of transaction processing and concurrency control protocols.
- **Objective 6:** Learn indexing schemes used in DBMS for the fast retrieval of data from the database.

**Course Outcomes / Course Learning Outcomes (CLOs)** 

	At the end of the course the learner will be able to	Bloom's Level	Expected Proficiency Percentage	Expected Attainment Percentage
Outcome 1	Identify and design database structure for a system.	4	70%	65%
Outcome 2	Design relational databases and execute queries on the database using SQL.	3	70%	65%
Outcome 3	Implement concurrency control protocols for transaction processing systems.	3	70%	65%
Outcome 4	Use indexing schemes for fast retrieval of data from the database.	3	70%	65%

**Course Unitization Plan - Theory** 

Unit	Unit Name	Required	CLOs	References	
No.		Contact	Addressed	Used	
		Hours			
Unit I	Introduction to DBMS and Relational model	8			
	File Processing System, Advantages of DBMS over File	1	1	1.2	
	Processing System, Database System Applications.	1	1	1,3	
	DBMS Architecture: The three-schema architecture	2	1	1.2	
	Data Independence: Logical and Physical.	2	1	1,3	
	Data Models: Hierarchical, network and relational models.	1	1	1,3	
	Introduction to relational model, concepts of domain,	2	1	1.2	
	attribute, tuple, relation, importance of null values.	2	1	1,3	
	Database constraints (Domain, Key constraints, integrity	2	1	1.2	
	constraints) and their importance.	2	1	1,3	
Unit II	Query processing	10			
	Relational Algebra.	2	2	1,3	
	Relational Calculus.	1	2	1,3	
	Introduction to SQL: Database Objects- DDL Schema	1	2	1.2	
	definitions.	1	2	1,3	
	DML- Insert, select, update, delete.	1	2	1,3	
	Views, exercise on SQL queries.	1	2	1,3	
	Transaction support in SQL.	1	2	1,3	
	Aggregate Functions, Null Values, Views.	1	2	1,3	
	Complex Integrity Constraints in SQL.	1	2	1,3	
	Assertions, Triggers	1	2	1,3	

		1		1
Unit III	Conceptual model and database design	9		
	Entity Relationship model Entity types, Entity Sets, Attributes, and Keys Relationships, Relationship types and constraints, Weak Entity types.	3	2	1,2
	Enhanced ER (EER) Modeling: Super/Sub Classes Specialization and Generalization. Constraints and characteristics of Specialization and Generalization.	2	2	1,2
	Example EER Schema.	1	2	
	Basics of Normalization, Normal Forms: First Normal Form (1NF), Second Normal Form (2NF), Third Normal Form (3NF)	2	2	1,2
	BCNF, 4NF	1	2	1,2
Unit IV	Transaction Processing, Concurrency Control and Recovery	10		
	Introduction of transaction processing, advantages and disadvantages of transaction processing system.	2	3	1,3
	Serializability and Recoverability of transaction.	2	3	1,3
	Concurrency Control Lock based Protocols.	2	3	1,3
	Timestamp Based Protocols – Validation based Protocols - Multiple Granularity Locking.	2	3	1,3
	Recovery techniques.	2	3	1,3
Unit V	Overview of Storage and Indexing	8		
	Data on External Storage, File Organization and Indexing - Clustered Indexes, Primary and Secondary Indexes.	2	4	1,3
	Indexed Sequential Access Methods (ISAM) B+ Trees: Tree Structure, Search, Insert, Delete.	3	4	1,3
	Hash Based Indexing: Static Hashing, Extendible hashing, Linear Hashing, Extendible vs. Linear Hashing.	3	4	1,3

## **Course Unitization Plan - Lab**

Exp No.	Experiment Name	Required Contact Hours	CLOs Addressed	References Used	
1.	Implementation of data storage and indexing methods using files.	4	4	1,2,3	
2.	DML queries on a single table.	2	2	1,4	
3.	Queries on Joining tables and Aggregate Functions.	4	2	1,3	
4.	Nested queries, Queries on creation of views, indexes, sequences and access privileges.	4	2	1,3	
5.	Triggers, Assertions.	4	2	1,3	
6.	SQL Transactions.	4	3	1,3

## **Course Unitization Plan**

Unit No.	Unit Name	Required Contact Hours	CLOs Addressed	References Used
Unit 1	Introduction	15		
	Basic Computer Network concepts, Protocol, Layering Scenario.	1	1	1,2
	Layer Architecture: OSI Model, TCP/IP model.	1	1	1
	Internet history standards and administration; Comparison of the OSI and TCP/IP reference model.	1	1	1,2
	Guided transmission media, wireless transmission media.	1	1	1
	Different LAN topologies: BUS, RING and STAR topology.	1	1	1
	Data Link layer design issues: Error detection techniques.	1	1	1
	Error Correction Techniques, Flow control.	1	1	1,2
	Sliding Window protocols. Go back N and selective Repeat protocols.	1	1	1,2
	Difference between single bit sliding window and n-bit sliding window protocols.	1	1	1,2
	Lab Experiment 1: Using Wireshark, for sniffing network traffic in real-time and analyse the packet contentstraffic analysis.		3	2
	<b>Lab Experiment 2:</b> Simulate error detection technique using CRC Algorithm.	2	3	2
	Lab Experiment 3: Write a program to implement error correction technique using Hamming code.	2	3	2
Unit 2	Medium Access Control	13		
	Static and Dynamic channel Allocations.	1	2	1,2
	Shared channel Access: Pure ALOHA and slotted ALOHA.	1	2	1,2
	Persistent CSMA protocols: 1,P and Non-persistent CSMA protocols.	1	2	1,2
	CSMA with collision detection. Comparison of different CSMA protocols.	1	2	1,2
	Collision free protocols: Bit-map protocol, Token Ring and Binary Count down protocols.	1	2	1,2

Limited Contention protocols: Adaptive tree walk protocol.	1	2	1,2
Shared medium for wireless networks: CSMA/CA or MACA.	1	2	1,2
Interconnecting LANs: HUBS, Repeaters and Switches and bridges.	1	2	1,2
Spanning tree algorithm for bridges.	1	2	1,2
<b>Lab Experiment 4:</b> Write a program to implement 1-bit Stop and Wait Protocol at data link layer.	2	3	2
Lab Experiment 5: Simulate N-bit Sliding Window protocol, at data link layer.	2	3	2
Unit 3 Network Layer	13		
Overview: Connection oriented and connection less services.	1	3	1,2
Comparison of packet switched, and circuit switched networks.	1	3	1,2
Routing: proactive routing and reactive routing protocols, static and dynamic routing protocols.	1	3	1,2
Dijkstra Algorithm, Distance vector routing and Link state routing protocols.	1	3	1,2
Routing in wireless networks: AODV and DSR routing protocols.	1	3	1,2
Overview of IP header and IP addressing.	1	3	1,2
Classful IP addressing: Class A, B,C,D and E.	1	3	1,2
Limitations of classful Addressing, Introduction to Subnet.	1	3	1,2
Overview of Congestion: Warning Bit, Choke packets, Load Shedding, RED (Random Early Detection)	1	3	1,2
Lab Experiment 6: Write a program to implement Dijkstra Shortest path routing protocol	2	3	2
Lab Experiment 7: Write a program to implement Distance Vector Routing.	2	3	2
Unit 4 Internetworking and Transport layer	11		
IP Encapsulation and Tunnelling.	1	4	1
IP packet fragmentation, ICMP, ARP.	1	4	1
ICMP, DHCP, Introduction to Transport layer.	1	4	1
Different end-to-end transport layer protocols: TCP and UDP.	1	4	1
Brief explanation of TCP protocol.	1	4	1
Brief explanation of UDP protocol.	1	4	1
Packet formats for TCP and UDP protocol.	1	4	1

		T	1
Lab Experiment 8: Demonstrate TCP Client Server	2	3	2
paradigm through simulation			
Lab Experiment 9: Demonstrate UDP Client Server	2	3	2
paradigm through simulation.			
Unit 5 Transport and Application protocols	23		
TCP Connection Management Modelling.	1	5	1
TCP Sliding Window.	1	5	1
TCP congestion control.	1	5	1
Introduction to application layer paradigms.	1	5	1
Client Server model.	1	5	1
Introduction and overview of HTTP protocol.	1	5	1
Overview of FTP protocol.	1	5	1
Operation of Electronic Mail.	1	5	1
Introduction to peer-to-peer communication models.	1	5	1
Introduction and overview of TELNET.	1	5	1
Importance of Security in computer Networks.	1	5	1
Lab Experiment 10: Write a program to implement echo command in client server socket programming.	2	3	2
Lab Experiment 11: Write a program to simulate Trace-route command.	2	3	2
Lab Experiment 12: Demonstrate the implementation of Ping command	2	3	2
Lab Experiment 13: Write a code to display the class of IP address, network mask and generate the subnet IP address based on the subnet bits entered from the keyboard	2	3	2
Lab Experiment 14: Write a code to implement sliding window protocol at the transport layer	2	3	2
Lab Experiment 15: Simulate transfer file operation using TCP	2	3	2

## **Course Unitization Plan**

Unit No.	Unit Name	Required Contact Hours	CLOs Addressed	References Used
Unit I	Introduction to WWW and Web development using HTML	8		
	Introduction to world wide web	1	1	1, 2
	Introduction of major tools for web developments	1	1	1
	Introduction to HTML	1	1	1
	Linking images	1	1	1
	Special characters and line breaks in XHTML	1	1	1
	Various lists (Ordered and Unordered lists)	1	1	1
	Tables in HTML	1	1	1
	Forms in HTML	1	1	1
	Lab 1: Practice basic Basic HTML Tags	2	1	1
	Lab 2: Create a static personal web page using hyperlinks, tables, images, etc.	2	1	1
	Lab 3: Create a registration webpage using html	2	1	1
Unit II	CSS and JavaScript	10		
	Introduction to CSS	1	2	1, 2
	CSS for background	1	2	1
	Manipulation of texts, fonts, borders etc. using CSS	1	2	1, 2
	Padding lists, positioning elements using CSS	1	2	1, 2
	Introduction to JavaScript	1	2	1
	Functions in JS, modules in JS	1	2	1
	Recursion in JS	2	2	1
	Arrays and Objects in JS	2	2	1, 2

	Lab 4: Webpage creation using CSS	2	2	1,2
	Lab 5: Webpage creation with client-side verification using Javascript	2	2	1,2
Unit III	Dynamic HTML	10		1
	Dynamic HTML: Object Model and Collections	1	3	1
	Object Referencing	1	3	1, 2
	Dynamic positioning	1	3	1, 2
	Basics of event handling	2	3	1, 2
	Various mouse events	1	3	1, 2
	Form processing	2	3	1
	Dynamic HTML Filters and transitions	1	3	1
	Data binding with tabular data control	1	3	1
	Lab 6 & Lab 7: Dynamic webpage development using HTML, CSS, Javascript with event handling	4	3	1,2
Unit IV	XML and Document Object Model	8		
	Introduction to XML	1	4	1
	Structuring data in XML, Document Type Definitions (DTDs) and Schemas	1	4	1
	W3C XML Schema Documents, XML Vocabularies	1	4	1
	Document Object Model (DOM) and DOM Methods	1	4	1
	Simple API for XML (SAX)	1	4	1
	Extensible Style sheet Language (XSL)	1	4	1
	Simple Object Access Protocol (SOAP)	1	4	1, 2
	Internet and World Wide Web Resources	1	4	1
	Lab 8 & Lab 9: Practive XML concepts: XML attributes, Namespace, XML HttpRequest, etc.	2	4	1,2
Unit V	Server-side Programming	9		
	Introduction to Webservers	1	5	1, 2
	HTTP request types	1	5	1

Basics of server-side scripting	1	5	1	
Accessing Web servers	1	5	1	
Introduction to PHP	1	5	1	
String processing, regular expressions, form processing	2	5	1	
Database connectivity using PHP	1	5	1	
Introduction to web services, REST and SOAP	1	5	1, 2	
Lab 10: Practice server-side scripting using PhP	2	5	1,2	
Lab 11 & Lab 12: Work on a web-application development which uses client-side scripting, server-side scripting with database access.	4	5	1,2	
Total Hours	Theory: 45			
	Practical: 2	4

#### **Course Objectives / Course Learning Rationales (CLRs)**

**Objective 1:** To enhance comprehension of both the theory that underpins and the accomplishments of artificial intelligence.

**Objective 2:** To introduce the concepts of a Rational Intelligent Agent and the different types of Agents that can be designed to solve problems.

**Objective 3:** To review the different stages of development of the AI field from human like behaviour to Rational Agents.

**Objective 4:** To impart basic proficiency in representing difficult real-life problems in a state space representation so as to solve them using AI techniques like searching and game playing.

**Objective 5:** to develop an awareness of the fundamental problems with knowledge representation, logic, blind and heuristic search, and other subjects like minimum, resolution, etc. that are crucial to AI systems.

**Objective 6:** To introduce advanced topics of AI such as planning, Bayes networks, natural language processing and Cognitive Computing.

	At the end of the course the learner will be able to	Bloom's Level	Expected Proficiency Percentage	Expected Attainment Percentage
Outcome 1	Identify the Intelligent systems and Approaches.	1	75%	65%
Outcome 2	Discuss the building blocks of AI as presented in terms of intelligent agents.	2	75%	65%
Outcome 3	Formalize the problem as a state space, graph, design heuristics and select amongst search or game-based techniques to solve them.	4	75%	65%
Outcome 4	Develop intelligent algorithms for constraint satisfaction problems and intelligent systems for Game Playing.	5	75%	65%
Outcome 5	Implement application-specific intelligent systems	3	75%	65%

Outcome 6	Represent logic-based techniques to perform inference and planning in given problems.	6	75%	65%
	inference and planning in given problems.

# **Course Unitization Plan - Lab**

No.	Lab Experiment	Required Contact	CLOs Address	References Used
		Hours	ed	Oseu
1	Artificial Intelligence Problem identification, PEAS description, and Introduction to PROLOG	2	1	1, 2, 3
2	Study of facts, objects, predicates, variables, arithmetic operators, simple input/output, and compound goals in PROLOG	4	2	1, 2
3	Study of string operations in PROLOG. Implement string operations like substring, string position, palindrome, and implement all set operations (Union, intersection, complement).	4	1, 2	1, 2, 4
4	Write a program for Usage of rules in Prolog. Create a family tree program to include following rules 1. M is the mother of P if she is a parent of P and is female 2. F is the father of P if he is a parent of P and is male 3. X is a sibling of Y if they both have the same parent. 4. Then add rules for grand-parents, uncle-aunt, sister and brother.	4	2, 3	1, 2
5	Write programs for studying Usage of arithmetic operators in Prolog.  a) Accept name of the student, roll no, his/her subject name, maximum marks and obtained marks in the subject. (Take marks of atleast 6 subjects). Compute the percentage of a student. Display his result with other information. b) Accept department, designation, name, age, basic salary, house rent allowance (HRA) of an employee. Compute dearness allowance (DA) which is 15% of basic salary. Determine the gross salary (basic salary + HRA + DA) of the employee. Display all information of the employee (Generate Payslip).	4	4	1, 2, 3
6	Implement a program for recursion and list in PROLOG	4	4, 5	1, 2, 4, 5
7	Write a program for studying usage of compound object and list in Prolog.  a) Write a program to maintain inventory items using a compound object: i. Accept from user the details of at least 10 objects. ii. Display from user the details of objects entered by user b) Find and display odd and even numbers from a given input list.	4	5	3, 4, 5
8	Write a program to solve the following problems.  1. Write a prolog program to solve "Water Jug Problem".  2. Write a program to implement a monkey banana problem.  3. Write a program to implement 8 Queens Problem.  4. Write a program to solve traveling salesman problem.	4	5, 6	4, 5

5. Write a program to solve water jug problem using LISP.

# **Course Unitization Plan - Lab**

S. No.	Experiment Name	Required Contact Hours	CLOs Addressed	References Used
1.	Lab Experiment 1: Perform the following operations using library functions a. Read, Display and write any color image in other formats. b. Find RED, GREEN and BLUE plane of the color image. c. Convert color image to grayscale image and binary image d. Resize the image by one half and one quarter. i.e. Image rotates by 45, 90 and 180 degrees.	<b>30</b> 2	1	1
2.	Lab Experiment 2: Create black and white images (A) of size 1024x1024. Which consists of alternative horizontal lines of black and white? Each line is of size 128. Create black and white images (B) of size 1024x1024. Which consists of alternative vertical lines of black and white? Each line is of size128. Perform the following operations on Image A and Image B. a. Image addition of A and B b. Subtraction of A and B c. Multiplying Images of A and B d. Create a grayscale image of size 256 x 1024. Intensity of image should vary sinusoidally. e. Create a white image of size 256x256, with black box of size 58x58 at centre.	2	1	1
3.	Lab Experiment 3: Develop programs for following intensity transformation operation on a grayscale image. Collect any gray scale image from any source. Process that image using these operations. a. Image negative b. Log transformation and inverse log transform: $s = c \log (1+r)$ , c is a const, $r \ge 0$ . s is pixel intensity of output image, r is the pixel intensity of input image. Study the effect of constant c on the quality of output image. c. Power law transformation: Study the effect of different values of Gamma used in this transformation. d. Contrast stretching e. Gray level slicing	3	2,3	1

4.	Lab Experiment 4: Develop programs for following spatial filtering operations on a grayscale image.  a. Averaging: Implement averaging filtering operations for different window sizes and study their effect on the quality of output image. Write your observations on output image quality.  b. Weighted averaging: Implement weighted averaging filtering operations for different window sizes and study their effect on the quality of output image. Write your observations on output image quality.  c. Median filtering: Implement weighted averaging filtering operations for different window sizes and study their effect on the quality of output image. Write your observations on output image quality.  d. Max filtering  e. Min filtering	3	4,5	4
5.	Lab Experiment 5: Take a grayscale image and add salt and pepper noise. Write programs for following operations and observe their outputs a. Linear smoothing or Image averaging b. Weighted averaging c. Median filtering. Compare the output quality among Image averaging and median filtering. d. Max filtering e. Min filtering	4	2,6	1
6.	Lab Experiment 6: Write programs to perform following sharpening operations on a grayscale image a. Laplacian filter b. Filtering using composite mask c. Unsharp masking d. High boost filtering e. Filtering using first order derivative operators such as sobel and prewitt mask.	4	2,6	1
7.	Lab Experiment 7: Write a program to improve contrast of an image using histogram equalization. The prototype of the function is as below: histogram_equalisation(input_Image, no_of_bins); The function should return the enhanced image. Consider two low contrast input images. Study the nature of the output image quality in each case by varying the number of bins.	3	2	1

	T			
	Lab Experiment 8:	3	2	1
	Take a low contrast grayscale image (A) and a high			
	contrast gray scale image (B). Write a program to			
	improve the contrast of A with the help of image B			
8.	using histogram specification or matching. The			
	prototype of the function is as below:			
	Histogram_sp(input_Image, specified_Iage,			
	no_of_bins); The function should return the enhanced			
	image.			
9.	Lab Experiment 9:	3		1,2,3
	Develop programs to implement frequency domain			
	smoothing filters (Ideal, Butterworth and Gaussian) and			
	apply these filters on a grayscale image.			
	a. Compare/comment on the output of Ideal,			
	Butterworth and Gaussian Low pass Filters having the			
	same radii (cutoff frequency) value.			
	b. Consider a suitable gray scale image and demonstrate		2	
	the ringing effect on the output of Ideal low pass			
	frequency domain filter.			
	c. Compare the output of Butterworth low pass filters			
	(order n=2) for different cutoff frequencies (5, 15, 30,			
	90, 120).			
	d. Compare the output of Gaussian low pass filters for			
	different cut-off frequencies (5, 15, 30, 90, and 120).			
10.	Lab Experiment 10:	3		1,2,3
	Develop programs to implement frequency domain			
	sharpening/High pass filters (Ideal, Butterworth and			
	Gaussian) and apply these filters on a grayscale image.			
	a. Compare/comment on the output of Ideal,			
	Butterworth and Gaussian High pass Filters having the			
	same radii (cutoff frequency) value.			
	b. Consider a suitable gray scale image and demonstrate		2	
	the ringing effect on the output of Ideal high pass		2	
	frequency domain filter.			
	c. Compare the output of Butterworth high pass filters			
	(order n=2) for different cut-off frequencies (5, 15, 30,			
	90, 120).			
	d. Compare the output of Gaussian high pass filters for			
	different cut-off frequencies (5, 15, 30, 90, and 120).

**Data Warehousing and Mining** 

Course Code	CSC 463	Course Category	Stream Elective (SE)	L-T-P-C	3	0	1	4
Pre- Requisite Course(s)		Co-Requisite Course(s)		Progressive Course(s)				
Course Offering Department	CSE	Professional / Licensing Standards						

## **Course Objectives / Course Learning Rationales (CLRs)**

Objective 1: To introduce the basic concepts of Data Warehouse and Data Mining techniques.

**Objective 2:** Examine the types of data to be mined and apply pre-processing methods on raw data.

**Objective 3:** Discover interesting patterns, analyze supervised and unsupervised models and estimate the accuracy of the algorithms.

Objective 4: Learn various data mining algorithms and its application domain.

Objective 5: Understand the latest trends of research in data mining.

	At the end of the course the learner will be able to	Bloom's Level	Expected Proficiency Percentage	Expected Attainment Percentage
Outcome 1	Students can be able to <b>identify</b> methods to create a data warehouse and pre-process the real world data to make it suitable for various data mining algorithms.	2	75%	70%
Outcome 2	Students can be able to <i>implement</i> models to measure interesting patterns from different kinds of databases.	5	75%	70%
Outcome 3	Students can be able to <i>design</i> , <i>develop</i> and <i>model</i> various techniques such as clustering, classification, and association mining of real world data for public health and safety, and the cultural, societal, and environmental considerations.	3	70%	60%

mining. 4 /0% 60%	Outcome 4	. 1.	4	70%	60%

Unit No.	Unit Name	Required Contact Hours	CLOs Addressed	References Used
Unit 1		13		
	Introduction: What is Data Science? - Big Data and Data Science hype – and getting past the hype - Why now?	2	1	1,2,3,6,8
	Datafication- Current landscape of perspectives	1	1	1,2,3,5,9,1
	Skill sets needed	1	1	1,2
	Statistical Inference - Populations and samples	1	1	1,2,6,9
	Statistical modelling,	1	1	1,2,6,9
	probability distributions,	1	1	1,2,6,9
	fitting a model	1	1	1,2,6,9
	Introduction to R	1	1	1,2,8
	<b>Lab Experiment 1:</b> Write R program to calculate the central tendency of any popular data set. The inbuilt functions in the python should not be used.	2	3	2
	Lab Experiment 2: Write R – Programming to plot various charts and graphs. You have to consider minimum two popular data sets and draw all the statistical observations.	2	3	2

Unit 2		17		
	Exploratory Data Analysis and the Data Science Process	2	1	1,2,3
	Philosophy of EDA - The Data Science Process	2	1	1,2,3
	The Data Science Process	1	1	1,2,6
	Three Basic Machine Learning Algorithms – Introduction	1	1, 2	1-10
	Linear Regression	1	1, 2	5,7
	K-Nearest Neighbours (K-NN)	1	1, 2	5,7
	K-means	1	1, 2	5,7
	Lab Experiment 3: Write a R Program to apply EDA on any two popular data sets and provided your analysis and interpretations. Use matplotlib library of python along with other libraries for the analysis and interpretation.	2	2	3
	Lab Experiment 4: Write R program to implement Linear Regression. Also, write your own program to implement Linear Regression without using the inbuilt function. Compare and contrast the results.	2	2	5
	Lab Experiment 5: Write R program to implement K-Nearest Neighbors. Also, write your own program to implement K-Nearest Neighbors without using the inbuilt function. Compare and contrast the results.	2	2	5
	Lab Experiment 6: Write R program to implement K-Means using inbuilt Library. Also, write your own program to implement K-Means without using the inbuilt function. Compare and contrast the results.	2	3	5
Unit 3		19		
	One More Machine Learning Algorithm and Usage in Applications	1	2	5,7
	Motivating application: Filtering Spam - Why Linear Regression and k-NN are poor choices for Filtering Spam	1	1, 2	5,7,9,10
	Naive Bayes and why it works for Filtering Spam	1	1, 2	5,7
	Data Wrangling: APIs and other tools for scrapping the Web	1	1, 2	4-10
	Feature Generation and Feature Selection (Extracting Meaning From Data)	1	3	4-10
	Motivating application: user (customer) retention	1	3	4-10
	Feature Generation (brainstorming, role of domain expertise, and place for imagination) -	1	3	4-10
	Feature Selection algorithms	1	3	4-10
	Filters; Wrappers; Decision Trees; Random Forests	1	3	4-10
	Lab Experiment 7: Write a R program to implement a Spam Filter using Linear Regression and K-NN. Use a popular dataset.	2	3	5

	Lab Experiment 8: Write a R Program to Scrapping the Web using suitable API. Create a usable dataset for	2	3	5
	classification and clustering purpose.	2	<u> </u>	3
	Lab Experiment 9: Write a R program to generate the	2	3	5
	features from the data set created by you for Lab experiment 8.	2	3	3
	Lab Experiment 10: Write a R Program to implement	2	3	
	Filter and Wrappers.	2	3	5
	Lab Experiment 11: Write a R Program to implement Decision Trees, Random Forests – The inbuilt functions should not be used for the implementation.	2	3	5
Unit 4		15		
	Recommendation Systems: Building a User-Facing Data Product	2	4	1,2,8
	Algorithmic ingredients of a Recommendation Engine	1	4	1,2,8
	Dimensionality Reduction	2	4	8,9
	Singular Value Decomposition - Principal Component Analysis -	1	4	8,9
	Mining Social-Network Graphs	1	4	8,9
	Clustering of graphs - Direct discovery of communities in graphs	1	4	8,9
	Partitioning of graphs - Neighbourhood properties in graphs	1	4	8,9
	Lab Experiment 12: Write a R Program to implement Singular Value Decomposition and Principal Component Analysis. Use any popular data set.	2	4	8
	Lab Experiment 13: Write a R Program to extract the friendship details of your face book account as Social network Graph and represent in various visual forms.	2	4	8
	Lab Experiment 14: Write a R program to extend the above exercise to discover the communities in the graph, partition the graph and extracting the neighbourhood properties of the graphs.	2	4	8
Unit 5		11		
	Data Visualization	1	4	1,2,3,6
	Basic principles, ideas and tools for data visualization	2	4	1,2,3,6
	Examples of inspiring (industry) projects -	2	4	1,2,3,6
	Data Science and Ethical Issues	1	4	1,2,3,6
	Discussions on privacy, security, ethics	1	4	1,2,3,6
	A look back at Data Science	1	4	1,2,3,6
	Next-generation data scientists	1	4	1,2,3,6
	<b>Lab Experiment 15:</b> Write R Program using Bokeh 2.1.1 to realize the all the basic principles of data visualization.	2	4	2

# **Course Objectives / Course Learning Rationales (CLRs)**

**Objective 1:** Understand the Big Data Platform and its Use cases.

Objective 2: Learn the overview of Apache Hadoop.

Objective 3: Gain knowledge of Flume-Sqoop-Pig-Spark-HBase

**Objective 4:** Understanding the querying bigdata with Hive.

Objective 5: Learning Data Manipulation using Hive QL Queries

Objective 6: Exposure to Big Data Analytics using R. Creating Graphs, data management.

	At the end of the course the learner will be able to	Bloom's Level	Expected Proficiency Percentage	Expected Attainment Percentage
Outcome 1	Identify Big Data and its Business Implications	2	70%	65%
Outcome 2	List the components of Hadoop and Hadoop Eco- System	1	70%	65%
Outcome 3	Access and Process Data on Distributed File System	2	70%	65%
Outcome 4	Analyse Job Execution in Hadoop Environment	4	70%	65%
Outcome 5	Develop Big Data Solutions using Hadoop Eco System	4	70%	65%
Outcome 6	Apply Machine Learning Techniques using R	3	70%	65%

#### **Course Objectives / Course Learning Rationales (CLRs)**

**Objective 1:** To learn the major milestones of historical development of IR systems.

**Objective 2:** To learn an architecture of a generic IR system and how to build one from scratch.

**Objective 3:** To understand how users interact with IR systems and how to maximize their satisfaction.

**Objective 4:** To learn the major theories and algorithms that are powering the modern search engines.

**Objective 5:** To gain hands-on experience in developing a working IR system.

	At the end of the course the learner will be able to	Bloom's Level	Expected Proficiency Percentage	Expected Attainment Percentage
Outcome 1	Students will understand and implement the basic concepts in indexing and its compressed construction	3	70%	60%
Outcome 2	Students will understand and implement the statistical IR models such as Probabilistic model, vector-space model, and language models.	3	70%	60%
Outcome 3	Students will build a document retrieval system through the practical sessions, including the implementation of a relevance feedback mechanism.	3	70%	60%
Outcome 4	Students will implement the Text/Document classification and clustering algorithms	4	70%	60%
Outcome 5	Students will understand the issues involved IR techniques for the web including crawling, link-based algorithms.	3	70%	60%

Pre-Requisite Course(s)		Co-Requisite Course(s)		Progressive Course(s)				
Course Offering Department	CSE	Professional / Licensing Standards						

## **Course Objectives / Course Learning Rationales (CLRs)**

Objective 1. Learn the basics of natural language processing and understand various steps in it.

Objective 2.To introduce the fundamentals of language processing from the algorithmic viewpoint.

**Objective 3**. To discuss various issues that make natural language processing a hard task.

Objective 4. To discuss some well-known applications of natural language processing

	At the end of the course the learner will be able to	Bloom's Level	Expected Proficiency Percentage	Expected Attainment Percentage
Outcome 1	Recall the fundamental concepts of natural language processing.	1	70%	68%
Outcome 2	Demonstrate algorithms for word level and syntactic analysis of textual data.	2	70%	65%
Outcome 3	Develop systems for language processing and information related tasks using text processing.	3	70%	60%
Outcome 4	Implement systems using natural language generation algorithms and machine translation techniques based on user queries	4	70%	65%

## **Course Objectives / Course Learning Rationales (CLRs)**

The objective of this course is to

Objective 1: Introduce how graphics are represented in digital media.

Objective 2: Gain knowledgeon how digital is presented in viewing devices and computers.

**Objective 3:** Understandthe modification and representation in 2D and 3D media over a wide domain.

	At the end of the course the learner will be able to	Bloom's Level	Expected Proficiency Percentage	Expected Attainment Percentage
Outcome 1	Develop 2d and 3D model graphics media in computer vision.	3	80%	70%
Outcome 2	Examine the inner content of 2D and 3D media.	4	70%	65%
Outcome 3	Use of heterogeneous display devices (like mobile, tv, hologram etc.) in computer vision to display the content of 2D and 3D media.	3	80%	70%
Outcome 4	Implement a system using graphic design skills to fulfil user requirements.	2	90%	70%

UNIT 1	Introduction	9		
	Introduction to Data Mining: What is data mining? Data Mining Goals.	2	1	1, 2
	Related technologies - Machine Learning, DBMS, OLAP, Statistics.	1	1	1
	Stages of the Data Mining Process.	1	1	1, 2
	Data Mining Techniques.	1	2	1, 2
	Knowledge Representation Methods.	1	2	1, 2
	Data Warehouse and OLAP: Data Warehouse and DBMS.	1	1	1
	Multidimensional data model.	1	1	1
	OLAP operations.	1	1	1
UNIT 2	Data pre-processing	9		
	Data pre-processing: Data cleaning. Data transformation.	2	1	1
	Data reduction. Data mining knowledge representation	2	1	1
	Attribute-oriented analysis.	1	1	1
	Data mining algorithms: Association rules: Motivation and terminology.	1	1, 2	1, 2
	Basic idea: item sets.	1	1, 2	1, 2
	Generating item sets and rules efficiently.	1	1, 2	1, 2
	Correlation analysis.	1	1, 2	1, 2

UNIT 3	Data mining algorithms	9		
	Data mining algorithms: Classification.	1	1, 2	1, 2
	Basic learning/mining tasks, inferring rudimentary rules: 1R algorithm.	2	1, 2	1, 2
	Decision trees, Covering rules.	1	1, 2	1, 2
	Data mining algorithms: Prediction, The prediction task.	2	1, 2	1, 2
	Statistical (Bayesian) classification.	1	1, 2	1, 2
	Bayesian networks.	1	1, 2	1, 2
	Instance-based methods (nearest neighbour), Linear models.	1	1, 2	1, 2
UNIT 4	Web crawling	9		
	Web crawling: Basic crawler algorithm.	2	3	3, 4
	Focused crawlers, Topical crawlers.	2	3	3, 4
	Web search: Web page pre-processing.	2	3	3, 4
	Inverted index, HITS algorithm.	1	3	3, 4
	Page ranking algorithm.	1	3	3, 4
	Leadership algorithm.	1	3	3, 4
UNIT 5	Social network analysis	9		
	Social network analysis: Co-citation and bibliographic coupling	2	4	5
	Community discovery.	2	4	5
	Web usage mining: Recommender systems.	2	4	5
	Mining Twitter.	1	4	5
	Mining Face book.	1	4	5
	Mining Instagram.	1	4	5

#### **Course Objectives / Course Learning Rationales (CLRs)**

**Objective 1:** Understand the complexity of a problem can be solved using algorithms, and how much resources (in form of time and space) it takes to solve a problem algorithmically.

**Objective 2:** Studies problems that cannot be solved and problems for which it is difficult to design efficient algorithms and how we can recognize such hard problems.

**Objective 3:** Gives a precise definition of what an algorithm is via Turing machines.

Objective 4: Learn central complexity classes, in particular NP-complete problems.

	At the end of the course the learner will be	Bloom's	Expected	Expected

## **Course Objectives / Course Learning Rationales (CLRs)**

Objective 1: To understand how to store data using fixed and variable length records in the file.

**Objective 2:** To implement index structures in the file.

Objective 3: To implement query parsing and execution.

Objective 4: To understand concurrency control protocols used for transaction processing.

Objective 5: To understand recovery techniques for recovering from transaction failures.

	At the end of the course the learner will be able to	Bloom's Level	Expected Proficiency Percentage	Expected Attainment Percentage
Outcome 1	Outline DBMS components, data storage in files and implement indexing schemes for fast retrieval of data. Explain B-tree, hash tables for complex data storage.	2	75%	80%
Outcome 2	Plan query execution. Construct query compiler, planner and executor.	3	70%	75%
Outcome 3	Analyse data base operations and Compare concurrency control protocols for transaction processing system.	4	75%	80%
Outcome 4	Explain concurrency control and system failure	2	75%	80%

### **Course Objectives**

**Objective 1:** To understand the limitations of today's Cloud computing models which are not designed for the volume, variety, and velocity of data generated by billions of Internet of Things (IoT) devices.

**Objective 2:** To understand the features of Edge Computing architecture and analyse business models that address the challenges of resource management and optimization.

**Objective 3:** To familiarize with Edge applications that monitor real-time data from network-connected things and initiating action involving machine-to-machine (M2M) communication.

**Objective 4:** To understand how developers, write IoT applications for Edge Computing nodes that are closest to the network edge and ingest the data from IoT devices.

**Objective 5:** To understand how Edge Nodes, extend the Cloud to the Network Edge through the Case studies for Response time, Data storage time, coverage area, and kinds of applications.

**Course Outcomes (COs)** 

	At the end of the course the learner will be able to	Bloom's Level	Expected Proficiency Percentage	Expected Attainment Percentage
Outcome	Demonstrate various architectural models and design	2	65%	60%
1	issues in Edge Computing.			
Outcome	Learn and apply various Edge+IoT communication	4	65%	60%

## **Course Objectives / Course Learning Rationales (CLRs)**

Objective 1: Introduce the basic concepts of data mining techniques

**Objective 2:** Explain the concepts of association rule mining and frequent pattern mining, classification and clustering

**Objective 3:** Discuss and analyse various classification algorithms, clustering algorithms and methods for outlier analysis.

**Course Outcomes / Course Learning Outcomes (CLOs)** 

	At the end of the course the learner will be able to	Bloom's Level	Expected Proficiency Percentage	Expected Attainment Percentage
Outcome 1	Identify and apply appropriate data mining algorithms to solve the given real-world problems.	3	75%	70%
Outcome 2	Compare and evaluate classification and prediction methods.	5	70%	65%
Outcome 3	Compare and evaluate clustering methods.	5	70%	65%
Outcome 4	Compare and evaluate association rule mining methods.	5	70%	65%
Outcome 5	Compare and evaluate outlier detection methods.	5	70%	65%

## **Course Unitization Plan**

Unit No.	Unit Name	Required Contact Hours	CLOs Addressed	References Used
UNIT 1	UNIT I: Fundamentals of Network Science	7		
	Networks in the real world: Social networks, Information networks, Technological networks, Biological networks	2	1	1, 3
	The large-scale structure of networks: Components, Shortest paths and small-world effect,	1	1	1, 3

			—————Andhra	Pradesh
	Degree distributions, Power laws and scale-free networks, Six degrees of separation, Random graphs models of network formation.	1	1	1, 3
	Mathematics of networks: Networks and their representation	1	1	1
	Types of networks: Weighted, directed and hypergraphs, The adjacency, Laplacian, and incidence matrices Degree, paths, components, independent paths, connectivity, and cut sets.	2	1	1
UNIT 2	Centrality measures	10		
	Degree centrality, Closeness centrality	2	2	1, 3
	Homophily, Transitivity and Preferential attachment	2	2	1, 3
	Clustering coefficient and Assortative mixing	1	2	1, 3
	Eigenvector centrality, Katz centrality	2	2	1, 3
	Betweenness centrality Page rank, Hubs and Authorities	3	2	1, 3
UNIT 3	Community Detection in Social Networks	12		
	Detecting communities in social networks, Definition of community, Applications of community detection	3	2	1, 2, 3

	Algorithms for community detection: The Kernighan-Lin Algorithm	2	2	1, 2, 3
	Agglomerative/Divisive Algorithms, Markov Clustering	2	2	1, 2, 3
	Multi-level Graph Partitioning Spectral Algorithms	2	2	1, 2, 3
	Modularity Maximization Other Approaches	2	2	1, 2
	Evaluating communities	1	2	1
UNIT 4	Predictive Analytics in Social Networks	9		
	Link prediction problem, Link prediction measures	1	3	1
	Feature based Link Prediction, Evaluation Node	2	3	1
	classification problem Node classification: Problem definition and applications	2	3	1
	Iterative classification methods; Label propagation method; Graph regularization method; Evaluation	1	3	1
	Motif analysis: Definition of network motifs	1	3	1
	Triangle counting and enumeration algorithms	1	3	1
	Applications of network motifs	1	3	1

UNIT 5	Current Research in Social Networks	7		
	Social Influence Analysis	2	4	1, 3
	privacy in social networks	2	4	1, 3
	Integrating sensors and social networks	1	4	1, 3
	Multimedia information networks in social media and social tagging and applications.	2	4	1, 3

**Course Objectives / Course Learning Rationales (CLRs)** 

Objective 1:Students learn cryptography basics (concepts, algorithms, techniques, implementation, and evaluation) for mobile apps.

Objective 2:Students learn basic cryptography implementation for Android mobile security.

**Objective 3:**Deal with the various aspects arising in architecting secure complex systems, such as analysing and identifying system threats and vulnerabilities, and investigating operating systems security.

### **Course Outcomes / Course Learning Outcomes (CLOs)**

	At the end of the course the learner will be able to	Bloom's Level	Expected Proficiency Percentage	Expected Attainment Percentage
Outcome 1	Understanding of Android and iOS ecosystems, exploring key components and security models, laying the groundwork for comprehensive mobile security assessments	2	70%	65%
Outcome 2	Apply mobile pentesting tools, enabling effective setup, session execution, and application attack surface analysis	3	70%	65%

Outcome 3	Obtain analytical skills to assess and counteract diverse mobile threats, including program security vulnerabilities and dynamic analyses for threat mitigation	4	70%	65%
Outcome 4	Obtain critical evaluation skills to address authentication, communication, and privacy vulnerabilities, proposing strategic enhancements for resilient mobile app security	4	70%	65%
Outcome 5	Evaluate advanced mobile security measures, covering robust transport layer protection, countermeasures for client-side injection, secure authentication, and modern cryptographic practices.	5	70%	65%

## **Course Objectives / Course Learning Rationales (CLRs)**

- **Objective 1:** To clarify the practical view towards the applications of these ideas in the engineering part of computer science.
- **Objective 2:** Studies problems that cannot be solved and problems for which it is difficult to design efficient algorithms and how we can recognize such hard problems.
- **Objective 3:** Gives a precise definition of what an algorithm is via Turing machines.
- Objective 4: Learn central complexity classes, in particular NP-complete problems.

**Course Outcomes / Course Learning Outcomes (CLOs)** 

	At the end of the course the learner	Bloom'	Expected	Expected

### **Course Objectives / Course Learning Rationales (CLRs)**

**Objective 1:** To enhance comprehension of both the theory that underpins and the accomplishments of artificial intelligence.

**Objective 2:** To introduce the concepts of a Rational Intelligent Agent and the different types of Agents that can be designed to solve problems.

**Objective 3:** To review the different stages of development of the AI field from human like behaviour to Rational Agents.

**Objective 4:** To impart basic proficiency in representing difficult real-life problems in a state space representation so as to solve them using AI techniques like searching and game playing.

**Objective 5:** to develop an awareness of the fundamental problems with knowledge representation, logic, blind and heuristic search, and other subjects like minimum, resolution, etc. that are crucial to AI systems.

**Objective 6:** To introduce advanced topics of AI such as planning, Bayes networks, natural language processing and Cognitive Computing.

	At the end of the course the learner will be able to	Bloom's Level	Expected Proficiency Percentage	Expected Attainment Percentage
Outcome 1	Identify the Intelligent systems and Approaches.	1	75%	65%
Outcome 2	Discuss the building blocks of AI as presented in terms of intelligent agents.	2	75%	65%
Outcome 3	Formalize the problem as a state space, graph, design heuristics and select amongst search or game-based techniques to solve them.	4	75%	65%
Outcome 4	Develop intelligent algorithms for constraint satisfaction problems and intelligent systems for Game Playing.	5	75%	65%
Outcome 5	Implement application-specific intelligent systems	3	75%	65%
Outcome 6	Represent logic-based techniques to perform inference and planning in given problems.	6	75%	65%

### **Course Objectives**

- **Objective 1:**To understand the limitations of today's Cloud computing models which are not designed for the volume, variety, and velocity of data generated by billions of IoT devices.
- **Objective 2:** To understand the features of Edge Computing architecture and analyse the applications of AI in Edge Computing.
- **Objective 3:** To familiarize with AI/ML models which can be deployed at edge to handle IoT applications.
- **Objective 4:** To understand and develop applications for edge nodes that are closest to the network edge and ingest the data from IoT devices.
- **Objective 5:** To understand how inferences can be drawn from ML workloads, performances of edge devices through the case studies.

#### **Course Outcomes**

UNIT 1	Internetworking models	17		
	Introduction- Networking models.	1	1	1
	Introduction about TCP/IP protocol suite	1	1,2	1
	Overview of Connecting devices	1	1	1
	Overview of Switches(Layer-2)	2	1	1
	Overview of Routers (Layer-3)	2	1	1,2
	Spanning tree for discovering the path in LAN	1	1	1,2
	Networks	1		
	Introduction to Gateways	1	1,2	1
	Overview of Backbone networks:	1	1	1
	In detail explanation about LAN, MAN and WAN	1	1	1
	networks	1		
	Lab Experiment : Trace the packet information from	2	1,2	1
	Wireshark packet analyser.			

	Write a NS2 code to design Star topology of wired Networks	2	1,2	1
	Write a NS2 code to design Bus topology of wired Network	2	1,2	1
UNIT 2	Principles of Internetworking	21		
	Overview of connection oriented and Connectionless services: Classless and Classful Addressing	1	2	1,2
	Internet Architecture: Overview of IPv4 and IPv6 addressing	2	2,3	1
	Overview of Transport Layer Services	2	2,3	1
	Overview of UDP and TCP protocols	2	2,3	1
	Introduction to flow control and Error control in Transport layer	1	2,3	1
	Flow control mechanisms in Transport layer	1	1,2	1,2
	Error control and Congestion Control in Transport layer	2	1,2,3	1.2
	Write a NS2 code to implement DSDV routing protocol in wired networks	2	1,2,3	1
	Write a NS2 code to implement AODV routing protocol in Mobile Adhoc networks	2	1,2,3	1
	Write a NS2 code to implement DSR routing protocol in infrastructure based wireless networks	2	1,2,3	1,2
	Write a NS2 code to implement Mobile IP protocol	2	1,2,3	1
	Write a NS2 code to analyse the IPv4 and IPv6 header	2	1,2,3	1
UNIT 3	Traffic management in networking	20	1,2,0	
	Overview of data traffic and different traffic flows	2	3	1
	Different types of congestion control mechanisms	1	3	1
	Congestion control in TCP	2	3	1,2
	Network assisted congestion control	2	3	1
	Introduction to Quality of Service	1	3	1
	Techniques to improve QoS service	1	3,4	1.2
	Introduction to Deterministic traffic flows	2	3,4	1
	Overview of Integrated services and Differentiated services: RSVP protocol	1	3	1,2
	Write a NS2 code to implement TCP protocol in wired network	2	3,4	1,2
	Write a NS2 code to implement UDP protocol in wired network	2	3,4	1,2
	Write a NS2 code to implement TCP protocol in wireless network	2	3	1,2
	Write a NS2 code to implement UDP protocol in wireless network	2	3	1
UNIT 4	Buffer Management	17		
~	= <del></del>	/		

Overview of Buffer management	2	4	1
Operation of Drop tail, Drop front and Random drop	2	4	1
Introduction to Passive buffer management schemes	2	4	1
Introduction to Active Queue management	1	3,4	1
Overview of different Queue management mechanisms	1	1,4	1,2
Overview and operation of Early Random Drop	1	4	1,2
Overview and operation of Random Early Detection	1	3,4	1,2
Implementation of RED algorithm in congestion	1	3,4	1
control	1		
Write a Java program to implement client-server	2	1,2	1
programming using TCP as a transport layer protocol	2		
Write a Java program to implement UDP protocol	2	1,2	1
Write a NS2 code to check the QoS of the TCP, UDP	2	3	1
protocol in both wired and wireless networks	2

## **Course Objectives / Course Learning Rationales (CLRs)**

**Objective 1:** Introduce the basic and advanced imaging technique

**Objective 2:** Explain the concepts of 3D modelling using single view to multi view

**Objective 3:** To gain knowledge over accessing and modification of 3D models in real-world scenario

	At the end of the course the learner will be able to	Bloom's Level	Expected Proficiency Percentage	Expected Attainment Percentage
Outcome 1	Content creation editing and managing of camera model.	3	70%	65%
Outcome 2	Use and examine the inner content of the image for 3D modelling	3	70%	65%
Outcome 3	Use the architecture of 3D mesh, texture, point cloud and make them easy to handle.	3	70%	65%
Outcome 4	Implement systems using multiview and stereo camera system to solve user requirements.	6	70%	65%
